

Laparoscopic Versus Open Cholecystectomy

Essay

*Submitted for Partial Fulfillment of the Master Degree
In General Surgery*

Presented By

Nader Mohamed Moustafa Mohamed

(M.B.B.Ch.)

Faculty of Medicine, Ain Shams University

Under the Supervision of

Prof. Dr. Ibrahim Shamekh Mohamed

Professor of General Surgery – Breast Surgery

Faculty of Medicine – Ain Shams University

Dr. Mohamed Hamdy Hamoda

Assistant professor of General Surgery

Faculty of Medicine – Ain Shams University

Dr. Ahmed El Sayed Morad

Assistant professor of General Surgery

Faculty of Medicine – Ain Shams University

Faculty of Medicine

Ain Shams University

2011

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ
قَالُوا سُبْحَانَكَ لَا عِلْمَ لَنَا
إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ
الْعَلِيمُ الْحَكِيمُ

صدق الله العظيم
سورة البقرة آية (32)

Acknowledgement

*First and above all, all thanks to **Allah, The Merciful, The Compassionate.** This work would not be a reality without his help.*

*My deep thanks are owed to **Prof. Dr. Ibrahim Shamekh Mohamed** Professor of General Surgery – Breast Surgery, Faculty of Medicine, Ain Shams University, for his kind care and sincere advices which have been supportive to go ahead through this work.*

*Words stand short to express my respect and thanks to **Dr. Mohamed Hamdy Hamoda**, Assistant Professor of General Surgery, Faculty of Medicine, Ain Shams University, for his kindness and cooperation in all steps of this work.*

*I am also very grateful to **Dr. Ahmed El Sayed Morad**, Assistant Professor of General Surgery, Faculty of Medicine, Ain Shams University, for his continuous help and his skillful technical assistance, advices, and unlimited time offered to me during this work.*

*I am also delighted to express my deepest gratitude and cordial thanks to **all my family members**. Without their continuous encouragement and support, I could not have finished this work.*

Contents

Acknowledgement.....	
List of Abbreviations.....	I
List of Figures	III
List of Tables	XI
Introduction.....	1
Surgical anatomy of biliary tract.....	3
Physiology and pathology of gallbladder.....	34
Management of gallbladder disease.....	42
Complication of cholecystectomy.....	106
Laparoscopic versus open cholecystectomy which is better.....	136
Summary & Conclusion.....	148
References.....	152
Arabic summary	

List of Abbreviations

CT	: Computerized Tomography.
ERCP	: Endoscopic retrograde cholangiopancreatography.
G.B	: Gallbladder.
HIDA Scan	: Hepato imino diacetic acid scan.
LC	: Laparoscopic Cholecystectomy.
MC	: Minilaparotomy Cholecystectomy.
MRCP	: Magnetic resonance cholangiopancreatography.
MRI	: Magnetic resonance imaging.
OC	: Open Cholecystectomy.
PTC	: Percutaneous Transhepatic cholangiography.

List of Figures

Figure	Title	Page
1	development of biliary tree	4
2	normal anatomy of biliary tree	6
3	Anatomy of the biliary system and its relationship to surrounding	6
4	surgical anatomy of extrahepatic biliary tract	7
5	the gallbladder and its duct system	7
6	Extra hepatic bile ducts	8
7	Relations of G.B	10
8	Structures contained within the hepatoduodenal ligament	11
9	Structures contained within the hepatoduodenal ligament tributaries of common bile duct and branches of the common hepatic artery	12
10	Arrangement of mucosal folds of the Duodenum indicating the site of the major duodenal papillae	13
11	different site of opening & union of common bile duct and pancreatic duct	13
12	Calot's triangle & hepatocystic triangle	14
13	The arterial supply of the G.B and Calot's triangle	16
14	venous drainage of the biliary tract	17
15	lymphatic of G.B& biliary tract	18
16	double G.B	19
17	deformities of G.B	20
18	Atresia of the Gallbladder.	22
19	types of cystohepatic junction	24
20	Some variation in biliary anatomy.	24

List of Figures (Cont.)

Figure	Title	Page
21	anomalies of cystic duct	26
22	anomalies of hepatic ducts	26
23	intrahepatic biliary duct atresia & hypoplasia	27
24	The two most common branching patterns of the cystic artery	31
25	possible origins of the cystic artery	32
26	Cystic artery anomalies	33
27	Gall stones vary from pure cholesterol (white), through mixed, to bile salt predominant (black)	37
28	gallstones & G.B after cholecystectomy	38
29	G.B & multiple gallstones	40
30	Gallstones	43
31	Acute cholecystitis (distended & inflamed G.B)	46
32	Operative photo showing acute cholecystitis	46
33	Chronic cholecystitis (shrunken & thick wall G.B)	48
34	Acute acalculous cholecystitis associated with adenomyomatosis	50
35	Ultrasonography showing acalculous cholecystitis	50
36	chronic acalculous cholecystitis	51
37	G.B filled with pus	53
38	gangrene of G.B	54
39	gangrenous G.B in acute acalculous cholecystitis	55
40	Perforation of G.B as seen intraoperative	55

List of Figures (Cont.)

<i>Figure</i>	<i>Title</i>	<i>Page</i>
41	Perforation of G.B fundus	56
42	Perforation of G.B and gallstones exists through skin	56
43	Gross image of G.B	57
44	ultrasonography showing cholesterolosis of G.B	57
45	Strawberry gallbladder.	57
46	ultrasonography showing a polyp of the mucous membrane inside G.B	58
47	Classification of Choledochal cyst.	60
48	Choledochal cyst intraoperative.	61
49	Laparoscopic exscion of Choledochal cyst.	62
50	76-year-old man with suspected G.B carcinoma undergoing staging CT. Contrast-enhanced CT scan shows hypodense polypoid gallbladder mass (<i>black arrow</i>) extending to surrounding liver (T3) (<i>arrowhead</i>) and adenopathy (<i>white arrows</i>).	64
51	G.B carcinoma (adeno carcinoma).	65
52	Infiltrative tumor invades the wall of G.B	66
53	carcinoma of G.B	67
54	Malignant tumors of the bile duct.	69
55	X-rays of G.B with stones.	71
56	ultrasound of G.B containing gall stone, showing an echo with acoustic shadowing.	73
57	CT showing G.B and stones.	73

List of Figures (Cont.)

Figure	Title	Page
58	C.T. shows emphysematous G.B	74
59	M.R.I. for acalculous cholecystitis.	75
60	MRCP scan shows structures of the common duct (large arrow) with a normal distal common duct (arrow head). The bile duct proximal to these malignant strictures is diluted.	75
61	ERCP demonstrates a normal common bile duct (large arrow), cystic duct (small arrow) and G.B	76
62	Percutaneous transhepatic cholangiography. Periapillary growth	77
63	Percutaneous transhepatic cholangiography. Shows Hilar cholangiocarcinoma.	77
64	Percutaneous transhepatic cholangiography. Shows Mid. Common bile duct stricture in a patient with large calculus in Hartmann's Pouch (Mirrizis syndrome)	78
65	HIDA scan was taken 60 minutes after injection of the radionuclide. The common hepatic and bile ducts are shown (arrows) but no filling of G.B has occurred. HIDA has entered the small bowel (B) and reflexed to the stomach(S).	78
66	Procedure of cholecystectomy.	79
67	Incisions sites for cholecystectomy.	80
68	Incisions sites of open cholecystectomy	81

List of Figures (Cont.)

Figure	Title	Page
69	Kocher incision	82
70	Midline incision.	83
71	inflammation of G.B	85
72	Exposure to identification of G.B	85
73	(A) Technique of OC the serosa overlying the Calot's triangle is opened and the cystic duct, artery are identified, a suture is placed at the G.B duct junction to prevent G.B from passing into the common bile duct. (B)Cystic artery is ligated and divided.	86
74	(A) G.B is dissected out of the liver bed. (B) Cholangiogram is obtained by insertion a cholangiocatheter and cystic duct is ligated.	88
75	good hemostasis after exsion of G.B	89
76	Kocher incision after open cholecystectomy.	90
77	midline incision after open cholecystectomy	91
78	minilaparotomy incision	91
79	instruments of L.C.	93
80	laparoscopic cholecystectomy incisions	94
81	insertion of Veres needle through the fascia into the peritoneal cavity	95
82	laparoscopic cholecystectomy intraoperative	96
83	Trocar placement of L.C.	97
84	Ports are put under vision.	98

List of Figures (Cont.)

<i>Figure</i>	<i>Title</i>	<i>Page</i>
85	The G.B is retracted cephalad using the grasper on the G.B fundus and laterally at the infundibulum, the peritoneum overlying the gallbladder infundibulum and neck and cystic duct is divided bluntly, exposing the cystic duct.	98
86	G.B being lifted away from the liver surface by forceps.	99
87	View obtained after dissection within Calot's triangle demonstrating the cystic duct and cystic artery clearly entering. The G.B at this point it is safe to ligate and divided the cystic duct	99
88	illustration of Calot's triangle dissection	100
89	If there are no plans to perform an operative cholangiogram, one proximal and two distal clips are placed and the cystic duct is sharply divided.	101
90	clipping of cystic duct.	101
91	Once the G.B cystic duct junction has been clearly identified clips are placed proximally and distally on the cystic duct, and the duct is sharply divided.	102
92	(A) After the cystic artery is divided, the G.B is dissected out of the liver using cautery. (B)The liver bed is then irrigated and inspected. (C)The G.B is removed through the supraumbilical incision	103

List of Figures (Cont.)

<i>Figure</i>	<i>Title</i>	<i>Page</i>
93	The G.B. is removed	104
94	closure of laparoscopic cholecystectomy: A: by stapler. B: by sutures.	105
95	Incisional hernia after open cholecystectomy	107
96	Inserting the first trocars under visual control	114
97	Small bowel ischemia after injury of bowel supply by veress needle	115
98	hernia sac at site of port entrance	116
99	G.B perforation	123
100	Two gallstones were retrieved from the right sided abscess	124
101	C.T showing spilled gallstones after cholecystectomy	124
102	CT scan showing abscess behind the right rectus sheath containing radio-opaque mass	125
103	ERCP showing right hepatic duct injury after laparoscopic cholecystectomy in a 73-year-old woman	126
104	Different types of bile duct injury	129

List of Figures (Cont.)

<i>Figure</i>	<i>Title</i>	<i>Page</i>
105	Percutaneous transhepatic cholangiogram shows Biliary leak that complicated laparoscopic cholecystectomy	130
106	bile leak	130
107	Bile leak after laparoscopic cholecystectomy in a 72-year-old woman. The bile leak was due to transection without ligation of an aberrant right hepatic duct. Coronal T2-weighted image obtained 21 days after L.C shows abrupt cutoff of an aberrant right hepatic duct (arrow)	131
108	Ultrasonography examination revealed an anechoic fluid.	132
109	Enhanced C.T. Scan shows a large subcapsular fluid	133
110	The large arrow indicates bile duct fistula while the thin arrow indicates stones in the common bile duct	133
111	wound infection post cholecystectomy	135

List of Tables

<i>Tables</i>	<i>Title</i>	<i>Page</i>
1	Origin of cystic artery	15
2	Additional causes of conversion from LC to OC	143
3	Reasons of conversion from LC to OC	144

Introduction
