**HYDROGEOLOGICAL AND GEOPHYSICAL
STUDIES FOR EVALUATION OF
GROUNDWATER POTENTIALITIES
AT CAIRO-BELBEIS DISTRICT, EGYPT**

A Thesis

Submitted to the Geology Department,
Faculty of Science, Suez Canal University
For the degree of Doctor of Philosophy in Science

(Geology)

BY

SABER MAHMOOD MOHAMED HUSSEIN

(B.Sc., M.Sc.)

Ismailia, Egypt

2001

EXAMINATION COMMITTEE

Prof. Dr. Abdel Rady Khareeb Hassanain

**Head, Department of ground electricity and magnetism
National institute of Astronomy and Geophysics, Helwan**

Hassane

Prof. Dr. Ahmed Maher Asal

**Prof. of Hydrology, Department of Mining, Petroleum and
Minerals, Faculty of Engineering, Cairo University**

Asal

Prof. Dr. Ibrahim Zakaria El-Shamy

**Prof. of Hydrogeology and Head, Department of Geology
Faculty of Science, Helwan University**

El Sh

Prof. Dr. El-Arabi Hendi Shendi

**Prof. of Applied Geophysics and Head, Department of
Geology, Faculty of Science, Suez Canal University**

Shendi

SUPERVISORS

The late Prof. Dr. Mohamed F. El-Kiki

**Professor of hydrogeology, Faculty of Science
Cairo University**

Prof. Dr. Ibrahiem Z. El-Shamy

**Professor of hydrogeology and Head of the
Geology department, Helwan University**

Prof. Dr. El-Arabi H. Shendi

**Professor of Applied and Environmental Geophysics
and Head of the Geology Department
Suez Canal University**

Dr. Fouad F. Shabaan

**Associate Professor of Geophysics
Mansoura University**

CONTENTS

	Page
CHAPTER ONE : INTRODUCTION	
1.1 : General	1
1.2 : Location	1
1.3 : Aims and Plan of the Present Studied	3
1.3.a : Field Work	3
1.3.b : Laboratory Works	3
1.3.c : Office Work	4
1.4 : Previous Work	4
1.5 : Well Data	7
1.6 : Climatic Conditions	7
CHAPTER TWO : GEOMORPHOLOGY AND GEOLOGY	12
2.1 : Topography of the Area	12
2.2 : Geomorphology	12
2.2.1 : Gebel EL-Hamza Ridge	12
2.2.2 : Heliopolis Basin	12
2.2.3 : El-Khanka and El-Gebel-El-Asfer Dunes	
2.2.4 : Nile Delta Flood Plain	16
2.3 : The Drainage Patterns	16
2.4 : General Geologic Settings	19
2.4.1 : Surface Geology	19
2.4.1.1 : Recent Sediments	19
2.4.1.2 : Pleistocene Sediments	22
2.4.1.3 : Pliocene Sediments	22
2.4.1.4 : Miocene Sediments	22
2.4.1.5 : Oligocene sediments	22
2.4.2 : Subsurface Geology	22
2.4.2.1 : Quaternary Sediments	23
2.4.2.1a : Pleistocene (Fluviatile) Deposits	23
2.4.2.1b : Old Deltaic Deposits	23
2.4.2.2 : Tertiary Sediments	23
2.4.2.2a : Pliocene	24

2.4.2.2b	: Miocene	24
2.4.2.2c	: Oligocene	24
2.4.2.2d	: Eocene	24
2.4.3	: Structural Geology	26
2.4.4	: Geological History	29
CHAPTER THREE: GEOPHYSICAL INVESTIGATIONS		32
3.1	: General	32
3.2	: Borehole Geophysics (Wireline Logging)	32
3.2.1	: Correction of the Digitized Well logging Data	33
3.2.2	: Processing and Interpretation of the Wireline Logging Data	33
3.2.2.1	: Qualitative Interpretation	36
3.2.2.1a	: <i>Neutron Log</i>	36
3.2.2.1b	: <i>Resistivity Log</i>	36
3.2.2.1c	: <i>Self-Potential Log</i>	36
3.2.2.1d	: <i>Gamma Ray Log</i>	37
3.2.2.2	: Quantitative Interpretation	39
3.2.2.2 A	: Determination of the Volume of Shale (Vsh)	39
3.2.2.2 A1	: Gamma-ray Tool as Shale Indicator	39
3.2.2.2 A2	: Resistivity Tools as a Shale Indicator	40
3.2.2.2 A3	: Neutron Tools as a Shale Indicator	40
3.2.2.2 A4	: Self Potential Tools as a Shale Indicator	40
3.2.2.2 B	: Determination of the Total Matrix Porosity (Φ_T)	41
3.2.2.2C	: Determination of the Rock Matrix Volume (Vmat)	42
3.2.2.2D	: Determination of the Formation Water Resistivity (R_w) and Conductivity (EC)	42
3.2.2.2 E	: Estimation of the Total Dissolved Solids (TDS in ppm)	42
3.2.2.2 F	: Estimation of the Intrinsic Permeability Index (K in mD)	43
3.2.3	: Results and Discussion	43
3.2.3.1	: Litho-saturation cross Plots	44
3.2.3.2	: Iso-parametric Maps	61
3.3	: Geoelectric Resistivity Investigations	70

3.3.1	: Basic Concepts of the D-C Resistivity Method	70
3.3.2	: Vertical Electrical Sounding (VES)	72
3.3.2.1	: Electrode Arrays in the VES Technique	72
3.3.2.2	: Wenner Configuration	73
3.3.2.3	: Schlumberger Configuration	73
3.3.3	: Resistivity Equipment	74
3.3.3.1	: Terrameter SAS 300 and Accessories	74
3.3.4	: Data Acquisition	76
3.3.5	: Data Processing	76
3.3.6	: Interpretation	76
3.3.6.1	: Qualitative Interpretation	78
3.3.6.2	: Quantitative Interpretation	80
3.3.6.2a	: Calibration of Sounding Results with Borehole Data	80
3.3.6.2b	: Geoelectric Cross-Sections	93
3.3.6.2c	: True Resistivity Maps	104
CHAPTER FOUR:	HYDROGEOLOGICAL SETTING	115
4.1	: General Outline	115
4.2	: Groundwater Occurrences	115
4.2.1	: Water Bearing Formation	115
4.2.1a	: Quaternary Aquifer	117
4.2.2b	: Miocene Aquifer	123
4.2.3c	: The Oligocene Aquifer	127
4.2.4d	: The Eocene Aquifer	129
4.3	: Factors Affecting the Hydrogeological Setting of the Studied area	129
4.3.1	: Hydrologic role of the existing geomorphic units	129
4.3.1.a	: Structural ridges	129
4.3.1.b	: Water Collecting Heliopolis Morphotectonic Depression	130
4.3.1.c	: Northern Slopes of G. El-Hamza Ridge	131
4.3.2	: Hydrographic system	131
4.3.3	: Lithological Nature	132
4.3.4	: Structural Elements	133
4.3.5	: Boundary Conditions	136

4.4	: Groundwater Flow Directions	136
4.4.1	: Quaternary Groundwater Flow Direction	136
4.4.2	: Miocene Groundwater Flow Direction	139
4.5	: The Hydrological Parameters	139
4.5.1	: The Quaternary Aquifer	143
4.5.1.a	: Transmissivity (T) and Hydraulic Conductivity (K)	143
4.5.1.b	: Specific Capacity	156
4.5.2	: The Miocene Aquifer	156
4.5.2.a	: Transmissivity (T) and Hydraulic Conductivity (K)	156
4.5.2.b	: Specific Capacity	156
4.5.3	: The Oligocene Aquifer Parameters	157
4.5.4	: The Eocene Aquifer Parameters	157
CHAPTER FIVE:	:HYDROGEOCHEMICAL COMPOSITIONS ZONATION AND VARIATIONS.	158
5.1	: General Outlines	158
5.2	: Hydrogeochemical Characters of Groundwater	158
5.2.1	: Hydrogeochemistry of the Quaternary Aquifer	158
5.2.1.1	: pH Values	158
5.2.1.2	: Total Dissolved Solids (TDS, mg/l)	162
5.2.1.3	: Electric Conductivity (EC, mmohs)	162
5.2.1.4	: Total Hardness	162
5.2.1.5	: Groundwater Types	164
5.2.1.6	: Major Ion Distribution	165
5.2.1.7	: Hydrochemical Representation	166
5.2.1.8	: Hydrochemical Ratios	179
5.2.1.9	: Water Genesis and Hypothetical Salt Combinations	180
5.2.1.10	: Hydrogeochemical Interpretation	180
5.2.2	: Hydrogeochemistry of the Miocene Aquifer	185
5.2.2.1	: pH Values	185
5.2.2.2	: Total Dissolved Solids (TDS, mg/l)	185
5.2.2.3	: Electric Conductivity (EC, mmohs)	188
5.2.2.4	: Total Hardness	188
5.2.2.5	: Groundwater Type	190

5.2.2.6	: Major Ion Distribution	191
5.2.2.7	: Hydrochemical Representation	191
5.2.2.8	: Hydrochemical Ratios	200
5.2.2.9	: Water Genesis and Hypothetical Salt Combinations	201
5.2.2.10	: Hydrogeochemical Interpretation	203
5.2.3	: Hydrogeochemistry of the Oligocene Aquifer	203
5.2.4	: Hydrogeochemistry of the Eocene Aquifer	206
5.3	: Lateral Hydrochemical Variation	206
5.4	: Groundwater Utilities	210
5.4.1	: Suitability of Water for Drinking and Domestic Purposes	214
5.4.2	: Suitability of Water for Agricultural Uses	215
5.4.2.1	: The Total Salinity	215
5.4.2.2	: The Relative Proportion of Sodium to Other Cations, (such as SAR)	216
SUMMARY AND CONCLUSIONS

SUMMARY IN ARABIC		

List of Figures

Fig. No.		Page
1.1	Location map of the studied area.	2
1.2	Location map of the studied wells.	8
1.3	Average climatological data of the Belbeis meteorological stations (1997).	10
1.4	Average climatological data of the Ismailia meteorological stations (1997).	11
2.1	Orographic map of the studied area.	13
2.2	The main geomorphic units of the studied area (after El-Hefny, 1980).	14
2.3	Distribution of the geomorphic units in the studied area (after EL-Shazly <i>et al</i> , 1975a).	15
2.4	Drainage pattern and hydrographic basins in the studied area (after EL-Fayoumy, 1968).	17
2.5	Drainage pattern map of the studied area.	18
2.6	Generalized stratigraphic column of the studied area. (Modified after El-Shazly, 1975,a).	20
2.7	Geological map of the studied area (modified after EL-Fayoumy, 1968 and Abu-Khabar, 1992).	21
2.8	Lithological log of Well No. E2 (after EL-Fayoumy, 1968).	25
2.9	Structural zones of the region east of the Nile Delta (according EL-Fayoumy, 1968).	27
2.10	Structural map of the studied area (after El-Dairy, 1980)	28
2.11	Interpreted tectonic structural map deduced from the Bouguer and reduced the Pole maps of the studied area (after El- Badrawy and Soliman, 1997)	30
3.1	A map showing the available logged wells in the studied area.	34
3.2	Generalized flow chart illustrating the steps followed in Formation Evaluation Program of wireline logs for groundwater investigations.	35
3.3	Litho-saturation cross-plot of wells Nos. 26 (a) and 42(b).	45
3.4	Litho-saturation cross-plot of wells Nos. 31 (a), 44(b) and 55(c).	46
3.5	Litho-saturation cross-plot of well No. 5.	47
3.6	Litho-saturation cross-plot of well No. 6.	48
3.7	Litho-saturation cross-plot of well No. 7.	49
3.8	Litho-saturation cross-plot of well No. 8.	50

Fig. No.		Page
3.9	Litho-saturation cross-plot of well No. 12.	51
3.10	Litho-saturation cross-plot of well No. 13.	52
3.11	Litho-saturation cross-plot of well No. 15.	53
3.12	Litho-saturation cross-plot of well No.16.	54
3.13	Litho-saturation cross-plot of well No.25.	55
3.14	Litho-saturation cross-plot of well No.56.	56
3.15	Litho-saturation cross-plot of well No.57.	57
3.16	Litho-saturation cross-plot of well No.3.	58
3.17	Litho-saturation cross-plot of well No.23.	59
3.18	Litho-saturation cross-plot of well No.19.	60
3.19	Volume % of argillaceous materials within the matrix of the Quaternary section.	62
3.20	Volume % of argillaceous materials within the matrix of the Miocene section.	63
3.21	Matrix porosity distribution map of the Quaternary section.	64
3.22	Matrix porosity distribution map of the Miocene section.	65
3.23	Intrinsic permeability contour map of the Quaternary and Miocene aquifers.	66
3.24	Total dissolved solids (in ppm) contour map of the Quaternary and Miocene aquifers.	67
3.25	Groundwater depth contour map in the studied area, based on interpretation of the wireline logs.	68
3.26	The current electrodes A and B and the potential electrodes M and N used to measure the potential difference.	72
3.27	Electrode arrays common in use. (a) Wenner (b) Schlumberger.	73
3.28	The SAS 300 Terrameter D.C. earth resistivity meter with accessories during the field measurements.	75
3.29	Location map of the Vertical Electrical Soundings in the studied area.	77
3.30	VES curve types map in the studied area.	79
3.31	VES charts and the accompanied RESIST models of VESes Nos.1 to 6.	82
3.32	VES charts and the accompanied RESIST models of VESes Nos.7 to 12.	83
5.33	VES charts and the accompanied RESIST models of VESes No.13 to 18.	84
3.34	VES charts and the accompanied RESIST models of VESes Nos.19 to 24.	85
