INTRODUCTION

INTRODUCTION

Women represents half of the population. The full participation and partnership of both women and men is very important for sustainable development. Women around the world hope for the future, for better lives, for themselves, education and prosperity for their children and security for their families. A broad array of social, political and economical changes are needed to overcome the poverty, lack of education and limited control of women over their own lives which often keep women's hopes from becoming true.⁽¹⁾

Women are the same as men, yet they are different. Both are similar as human beings, yet different as a result of their biological and physiological make up. Such differences should be recognized, appreciated and treated from the beginning with respect.⁽²⁾

Throughout history, however, society has tended to emphasize the differences and separate women on all kinds of grounds: political, social, economic and cultural. When these differences become synonymous with inequities and discrimination,
