ABSTRACT

Sport injuries accounted one of the most important medical expenses during the last decade. Because of the increment of participation in sporting activities at every age group, more children and adolescent than ever before are members of sport clubs or participate in non-organized sporting activities. This trend is paralleled by an increasing interest in the study of sport injuries, especially in the prevention of such injuries.

Football sport injuries data were collected during season 2000-2001 for 1057 male and female players in different age groups. The results of the study revealed that (55.65%) of injuries were mild, (44.77%) were due to contact and tackling and (85.66%) of injuries occur during competition.

Also, the results of the study revealed that prevalence of contusions (28.68%) followed by muscles rupture (21.2%), then joints soft tissue injuries (19.75%), then muscles strain (14.79%), then bone fractures (4.22%) and finally joint dislocations (3.33%).

The incidence and severity of injuries during sporting activities mandate more attention, which should be paid to prevention. So we recommend adequate and competent coaching and medical staff that will embrace sound conditioning in training equipment.

Also the rehabilitation program should start at the time of acute care.

KEY WORDS:

Football Sport injuries - Soccer - Overuse injuries .

ACKNOWLEDGEMENT

First and forever thanks and gratitude to ALLAH for his gifts.

I would like to express my sincere appreciation and gratitude for my professors for their enthusiastic and continuous assistance and cooperation.

TO SECULAR TO THE SECULAR SECU I wish to express my appreciation and thanks to eminent Prof.Dr. Basel Kamal El-Zorkany Professor of Rheumatology & Rehabilitation, Faculty of Medicine, Cairo University. because he 🖥 agreed to supervise and guide this work. He gave me the first push and shared actively in planning and building up of this research. I have got great benefits from his big experience.

l like to thank Dr. Ihab Ibrahim Aboul-Eyon ,lecturer of Rheumatology & Rehabilitation, Faculty of Medicine, Cairo University, for the great effort he made to produce this study in the best form. He guided my research with enthusiasm and valuable advice.

At last, I cannot forget the person who was always behind my success. This is my Wife, the one who assisted, in numerous ways, in taking care of this research and tolerated a lot for it to be born.
