EFFECTS OF MOULD MODIFICATIONS ON CASTING SPEED IN THE CONTINUOUS CASTING OF HIGH STRENGTH STEEL GRADE 60.

M.Sc. Thesis
Submitted to

Metallurgy and Material Eng. Dept.
Faculty of Petroleum & Mining Eng.
Suez Canal University

By

ENG. SABER M. ABDEL AZIZ
Continuous Casting Engineer
Al Ezz Steel Company

Under the supervision of

PROF. DR. ENG. M. I. ABBAS

Metallurgy and Material Eng. Dept.
Fac. Of Pet. & Mining Eng.

Prof. Dr. Eng. F.N.El Sabbahy
Metallurgy and Material Eng. Dept.

Dr. Eng. Gamal M. Megahed
Al Ezz Steel Company

Suez Canal University

2002

B 0250

TO THOSE, WHOM I OWE MY SUCCESS IN LIFE, TO THOSE WHO
SUFFER FOR ME WITH ALL LOVE AND CARE..... TO MY FATHER
IMMORTAL SOUL, TO MY WIFE AND ALL MEMBERS OF MY
FAMILY.

ACKNOWLEDGEMENT

I have pleasure to express my sincere gratitude to Prof. Dr. Mahmoud I. Abbas, Member of Metallurgy and Material Engineering Department, Faculty of Petroleum and Mining Engineering, Suez Canal University, for his guidance, encouragement and for many valuable suggestions and fruitful advice at all stages of work.

I would like to express my deep appreciation to Prof. Dr. Fawzy N. El-Sabbahy, Member of Metallurgy and Material Engineering Department, and Dr. Eng. Gamal M. Megahed, Al Ezz Steel Company, for great efforts and enlightening discussions through the preparing of this thesis.

I would like also to thank Melt shop production management, All Ezz steel company, for their help through the practical work of this study.

Special acknowledgment are due to all members of the continuous casting department of All Ezz steel company for their help in conducting the experimental work.

Eng.

Saber M. Abdel Aziz .

Contents

Title	Page
Chapter 1 : Introduction	1
Chapter 2 : Literature Survey	3
2.1 Historical Background	3
2.2 Brief Description and basic principles of the continuous casting process.....	6
2.3 Evolution of machine modification.....	13
2.4 Advantages of continuous casting over ingot casting.....	16
2.4.1. Improved yield.....	18
2.4.2. Reduced energy consumption.....	18
2.5 Main parts of continuous casting machine.....	20
2.5.1 Tundish technology	20
2.5.2 Mould technology.....	21
2.5.2.1. Mould material.....	23
2.5.2.2 Mould oscillation.....	27
2.5.2.3. Mould heat transfer.....	30
2.5.3. Solidification in the mould.....	36
2.5.4 The strand solidification model.....	38
2.6. Secondary cooling.....	38
2.6.1. First cooling sector.....	40
2.6.2. Second cooling sector.....	40
2.6.3. Third cooling sector.....	40
2.6.4. Fourth cooling sector.....	40
2.6.5. Heat extraction in the secondary cooling zone.....	40
2.6.6. Solidification in the secondary cooling zone.....	42
2.7. Billet surface temperature.....	44

2.8. Withdrawal and straightening unite.....	49
2.9. Dummy bar.....	50
Chapter 3 : Practical and Experimental work.....	51
3.1 Steel grade.....	51
3.2 Mould	51
3.2.1 Mould dimensions.....	51
3.3.. Solid skin thickness measurements.....	53
3.4. Determination of mould wall distortion.....	53
3.5. Temperature measurements.....	53
3.5.1. Temperature measurements of primary water.....	53
3.6. Testing.....	57
3.6.1. Tension test.....	57
3.6.2. Corrosion test.....	57
3.7 Metallography.....	59
3.7.1. Microstructures.....	59
Chapter 4 : Results and Discussion.....	60
4.1 Improving productivity.....	60
4.1.1 Improving casting speed.....	62
4.1.1.1 Improving strand cooling, (primary &secondary cooling).....	62
4.1.1.2 Mould modification.....	62
4.2 Effect of Improving casting speed on ΔT in the short and long moulds at various tundish steel super-heat.....	64

4.3	Mould heat transfer.....	69
4.3.1	Heat transfer for short mould type.....	69
4.3.2	Heat transfer for long mould type.....	69
4.3.3	Effect of tundish steel super heat on mould heat transfer.....	72
4.3.4	Effect of increasing casting speed on mould heat transfer.....	74
4.4	Solidification in the mould (solid skin formation).....	100
4.4.1	Effect of increasing casting speed on solid skin thickness.....	76
4.4.2	Calculations of solid skin thickness along short mould type.....	80
4.4.3	Calculations of solid skin thickness in case of long mould type.....	80
4.5	Liquid pool depth (metallurgical length).....	85
4.6	The solid-liquid ratio sketches at various casting speeds along casting strand.....	88
4.7	Effect of casting speed on billet surface temperature.....	104
4.8	Strand straightening and strain rate evolved.....	106
4.9	Continuous casting process profiles showing the solid skin thickness, billet surface temperature, liquid core temperatures and liquid core length at $V_C = 3.5 \text{ m/min}$ & $T.T = 1545 \pm 5^\circ\text{C}$ in AL EZZ steel billet caster.....	108
4.10	Mould wall distortion.....	111
4.11	Inspection of billets quality.....	113
4.11.1	Visual examinations of produced billets.....	114
4.11.2	Micro-examinations.....	115
4.11.2.1	Micro-structures of produced billets.....	115
4.11.2.2	Micro-structures of produced hot rolled bars (final products).....	115
4.12	Mechanical testing results of produced hot rolled bars after various continuous casting conditions.....	120

4.13. Corrosion test results of produced hot rolled bars after various continuous casting conditions.....	120
Chapter 5 : Conclusions.....	124
Chapter 6 : References.....	125
