Economics Department

**The Economic Impacts of Commercializing
Biotech Crops in Egypt**

A Thesis Submitted for Doctoral Degree in Economics

By

Dalia Ahmed Aly Reda Elseaufy

Assistant lecturer – Economics Department
Faculty of Commerce - Ain Shams University

Under the Supervision of

Prof. Dr. Ihab Nadeem

Professor – Economics Department
Faculty of Commerce - Ain Shams University

Dr. Eman Hashim

Lecturer- Economics Department
Faculty of Commerce - Ain Shams University

2014

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

وَمَا تَوْفِيقِي إِلَّا بِاللَّهِ

عَلَيْهِ تَوَكَّلْتُ وَإِلَيْهِ أُنِيبُ

كلية التجارة
قسم الاقتصاد

رسالة دكتوراة

اسم الباحثة: داليا أحمد على رضا السيوفى
عنوان الرسالة: " الاثار الاقتصادية للتداول التجارى للمحاصيل المنتجة بالتكنولوجيا الحيوية فى مصر "

الدرجة العلمية: دكتوراة الفلسفة فى الاقتصاد

تاريخ الرسالة: 2014 م

لجنة المناقشة والحكم على الرسالة

1- الأستاذ الدكتور/ ايهاب عز الدين نديم

أستاذ الاقتصاد - جامعة عين شمس

2- الأستاذ الدكتور / يمن محمد حافظ الحماقى

أستاذ الاقتصاد - جامعة عين شمس

3- الأستاذ الدكتور/ عمرو محمد التقى

أستاذ الاقتصاد و نائب رئيس أكاديمية السادات

تاريخ البحث / / 2014

الدراسات العليا

أجيزت الرسالة

/ / 2014

موافقة مجلس الجامعة

/ / 2014

ختم الإجازة

موافقة مجلس الكلية

Economics Department

Approval Sheet

Student Name: Dalia Ahmed Aly Reda Elseaufy

Title of thesis: “The Economic Impacts of Commercializing Biotech Crops in Egypt”

Academic Degree: PhD. in Economics

This thesis submitted in partial fulfillment of the requirements for the
Doctoral Degree in Economics

Administration has been approved by:

Examination Committee

1- Professor Dr. Ihab Nadeem

Professor – Economics Department

Faculty of Commerce - Ain Shams university

2- Professor Dr. Yomn El-Hamaky

Professor – Economics Department

Faculty of Commerce - Ain Shams university

3- Professor Dr. Amr El-Taki

Professor of Economics - Sadat Academy

Date of Dissertation Defense / / 2014

Approval date / /2014

Acknowledgment

First and foremost, I would like to thank ALLAH for granting me the persistence to accomplish this research work.

*I offer my sincerest gratitude to my supervisor, **Prof. Dr. Ihab Nadeem** – professor of Economics in the Faculty of Commerce of Ain Shams University, who has supported me throughout my thesis with his patience and knowledge whilst allowing me the room to work in my own way. Without him this thesis would not have been completed. One simply could not wish for a better supervisor.*

*I would like to express my many thanks to **Prof. Dr. Yomn El-Hamaky** – professor of Economics in the Faculty of Commerce of Ain Shams University- who has been supporting me since I joined the staff of the faculty as a demonstrator. Thanks for agreeing to be a member of this viva committee.*

*I would also like to express my deep thanks to **Prof. Dr. Amr El Taki**– professor of Economics at Sadat Academy, for agreeing to be a member of this viva committee and for his valuable time and professionalism.*

*Many thanks are extended to my co-supervisor **Dr. Eman Hashim**-Lecturer of Economics in the Faculty of Commerce of Ain Shams University.*

List of contents:

Introduction	1
Part One: Defining biotech crops and its importance	7
Chapter One: Defining biotech crops	7
A. Biotechnology	7
B. Agricultural Biotechnology	8
a. Conventional planting	9
b. Tissue culture and micro propagation planting	10
c. Molecular breeding or markers techniques	11
d. Immune-diagnostic techniques	12
e. Genetic engineering and biotech crops	13
C. Biotech crops	18
D. Biofuels	20
E. The global status of biotech crops	21
<i>Summary of chapter one</i>	27
Chapter Two: Importance of biotech crops in development	28
A. Importance of agriculture in development	29
B. Obstacles of agricultural expansions	31
a. Land and water needs	31
b. Other input needs	33
c. Capital and investment in agriculture	33
d. Research and development	34
C. Challenges facing agricultural expansions	34
a. Growth in population volume and demand for labor	34
b. Increase in the prices of food	35
c. Meeting the millennium development goals economically and socially	36

d. The challenge of changing climate conditions	37
e. Increased trend in biofuel production	38
D. Benefits and concerns of agricultural biotechnology	40
a. Economic impacts	41
b. Agronomic and biodiversity impacts	44
c. Social, health and food safety impacts	45
d. Environmental and Ecological impacts	48
e. Ethical impacts	49
<i>Summary of chapter two</i>	50
 Part Two: Regulating and commercializing biotech crops globally, in the United States and Argentina.	52
 Chapter One: Regulating and commercializing biotech crops globally.	51
 Section One: Regulating biotech crops globally	52
A. Comparing the expected advantages captured in developing countries in contrast to advantages captured in developed countries	52
B. The economic evaluation of commercializing biotech products	54
a. Difference between private and public sectors	54
b. The role of the government in encouraging biotech innovation	55
c. Cost-benefits assessments for biotech products	56
d. The influence of consumers in accepting biotech products	57
e. The impact of government regulatory policies	58
f. The influence of the trade policies	58
g. The importance of enhancing research and development efforts	59
C. Labeling of biotech food	59
D. Intellectual property rights for biotech products	62

E. Cartagena protocol on biosafety to the convention on biological diversity	63
Section Two: Global impacts of Biotech crops and biotech corn importance	66
A. Global impact of Biotech crops	66
a. Aggregate global level impacts	66
b. Crop production effects	68
c. Trade flows and related issues	70
B. The global importance of corn	72
a. General information about corn	72
b. Relative importance of corn	72
c. Corn use for ethanol biofuel	78
d. Major countries producing corn globally	81
e. Major countries exporting corn globally	81
f. Major countries importing corn globally	82
<i>Summary of chapter one</i>	83
 Chapter Two: Regulating and commercializing biotech crops in the United States.	84
A. Regulating biotech crops in the United States	85
B. Adoption of biotech crops in the United States	92
a. Adoption of biotech crops by trait and crop	92
1. Adoption of biotech crops in the United States by trait	92
2. Adoption of biotech crops in the United States by crop	94
b. Farm level economic impacts of biotech crops adoption in the United States	99
C. The case of biotech corn in the United States	100
a. Relative importance of corn in the United States.	100
b. Biotech corn in the United States	111
c. Estimating economic impacts of biotech corn in the United States	112
<i>Summary of chapter two</i>	118

Chapter Three: Regulating and commercializing biotech crops in Argentina. 119

- A. Status of biotech crops in Argentina 120
- B. Regulating biotech crops in Argentina 122
 - a. Labeling 123
 - b. Trade barriers 124
 - c. Intellectual Property Rights 124
 - d. Biosafety law and Cartagena protocol 125
 - e. The evolution of biotech crops in Argentina 126
- C. Importance of corn in Argentina's economy 128
- D. Biotech Corn in Argentina 138

Summary of chapter three 140

Part Three: Regulating and commercializing biotech crops in Egypt in comparison to the United States and Argentina 141

Chapter One: The Status of regulating and commercializing biotech crops in Egypt in comparison to the United States and Argentina 141

- A. Economic and Agricultural status in Egypt 141
- B. Importance of corn in Egypt 143
 - a. Corn production and utilization 143
 - b. Corn trade status 152
 - c. Major agricultural production problems for corn in Egypt 154
 - d. The impact of using agricultural biotechnology in response to corn problems in Egypt 155
- C. Regulations managing agricultural biotechnology in Egypt 156
 - a. AGERI and its role in managing agricultural biotechnology in Egypt 157
 - b. Cartagena protocol of biosafety and national biosafety committee 160

c. Labeling requirements for biotech products and trade barriers	161
D. Status and stages of introducing biotech corn in Egypt	162
E. The main characteristics of the biotech IR corn in Egypt	164
<i>Summary of chapter one</i>	165
 Chapter Two: Assessing the economic benefits of commercializing biotech corn in Egypt through Cost-Benefit study	166
A. Cost Benefit Analysis	166
a. Cost of production	167
b. Yield per unit of area	172
c. farm gate price	173
d. Gross margin revenue	173
B. Expected impacts on corn production gap and imports	180
a. The scenario of producing 5% biotech corn	180
b. The scenario of producing 10% biotech corn	183
C. Social and Environmental impacts of biotech corn	186
<i>Summary of chapter two</i>	187
 Chapter Three: Assessing the economic impacts of commercializing biotech crops in Egypt through questionnaire field study	188
The sample of the study	188
A. Analyzing the variation in total cost, gross revenue and net income per feddan of conventional corn versus biotech corn for the sample study in 2013	191
a. For the first and second groups in the sample. People working in agricultural	191

companies and universities/ research institutes with less than 10 years of experience)	
i. Comparing the cost of production	191
ii. Comparing gross revenue	193
iii. Comparing net income	195
b. The third and fourth groups in the sample. People working in agricultural companies and universities/ research institutes with more than 10 years of experience)	197
i. Comparing cost of production	197
ii. Comparing gross revenue	199
iii. Comparing net income	201
B. Analyzing the relative importance of cost of production items for the conventional versus the biotech corn for the sample study in 2013	203
a. The relative importance of the cost of production items for the total study sample for the conventional corn	203
b. The relative importance of the cost of production items for the total study sample for the biotech corn	205
C. Analyzing the profitability rate of returns for the conventional versus the biotech corn and deciding the economic feasibility of planting biotech corn in Egypt	207
D. The relative importance of different information needed for planting biotech crops in Egypt	210
a. The relative importance for different means of managing agricultural genetic engineering biotechnology	210
b. The impact of genetic engineered biotech crops on human health	212
c. The relative importance of the main problems hindering planting genetic	214

engineered biotech crops in Egypt	
d. The relative importance of the means for spreading the knowledge about genetic engineering biotechnology in agriculture	216
e. The relative importance for the proposed marketing channels	218
Conclusions of the study	220
Recommendations of the study	223
References	225
Appendix	
Questionnaire English form	233
Questionnaire Arabic form	237
Arabic summary	240

List of tables

No.	Name	Page
1	Conventional planting versus Genetic Engineering planting	16
2	Global area of Biotech crops in 2013: by country (million hectares)	22
3	Global area (million hectares) of commercialized Biotech crops 1996-2013	24
4	Additional crop production arising from positive yield effects of biotech crops (1996-2012)	68
5	Share of global crop trade accounted for biotech production 2011/12 (million tons)	70
6	Percentage of corn produced globally from total produced cereals (2003/04-2013/14)	73
7	World corn total production, utilization, gap and exports (2003/04 -2013/14)	75
8	Corn use for ethanol /excluding non-fuel in the United States (2006/07-2013/14)	79
9	Number of releases, sites, and constructs	87

	authorized by APHIS for evaluation (1989-2012)	
10	Development of area planted with biotech crops and its percentage in the United States (2000-2013)	94
11	Total Biotech crops farm income benefits 1996-2011 in the United States by million US \$	99
12	Total cereal production, total corn production, percentage of corn from total cereal production in the United States (2004/05-2013/14)	102
13	Total cereal exports, total corn exports and percentage of corn from total cereal exports in the United States (2004/05-2013/14)	103
14	United States Corn production, price, value of production, area harvested and yield (1996-2012)	105
15	Corn exports quantities and value in the United States (1996-2011)	109
16	Farm level income impact of using biotech IR corn in the United States (1996-2011)	114
17	evolution of planted area with biotech soybean and biotech corn in Argentina (1996-2011)	126
18	Total cereal production, total corn production, percentage of corn from total cereal production in Argentina (2004/05-2013/14)	128
19	Total cereal exports, total corn exports and percentage of corn from total cereal exports in Argentina(2004/5-2013/14)	130
20	Total corn production, price, value of production, area harvested and yield per hectare in Argentina(1996-2012)	132
21	Corn export quantities and values in Argentina (1996-2011)	136
22	Total Production, harvested Area and yield productivity of Corn in Egypt (1996-2013)	145
23	Percentage of corn from Total cereal production in Egypt (2003/04-2013/14)	149

24	Egypt's corn domestic gap (2003/04-2013/14)	151
25	Egypt' corn Imports (1996-2012)	153
26	Human labor 2009-2012 (LE/feddan)	168
27	Machine 2009-2012 (LE/feddan)	168
28	Seeds 2009-2012 (LE/feddan)	169
29	Manure2009-2012 (LE/feddan)	169
30	Chemical fertilizers 2009-2012 (LE/feddan)	170
31	Phtosanitary products2009-2012 (LE/feddan)	170
32	Pesticides 2009-2012 (LE/feddan)	171
33	Total Costs 2009-2012 (LE/feddan)	171
34	Yield 2009-2012 ardab/ feddan	172
35	Farm gate price 2009-2012 LE/ ardab	173
36	Sales value per feddan 2009-2012	173
37	Gross margin revenue per feddan 2009-2012	174
38	Average yield, price, cost of production and gross margin of Ajeeb YG Hybrid corn compared to the conventional varieties (2009-2012)	175
39	Expected reduction in the corn production gap for 5% biotech corn production scenario	180
40	Expected reduction in the corn imports for 5% biotech corn production scenario	182
41	Expected reduction in the corn production gap for 10% biotech corn production scenario	183
42	Expected reduction in the corn imports for 10%biotech corn production scenario	185
43	The number and educational level of the study sample in 2013	190
44	Single ANOVA for cost of production for first and second group sample in 2013	192
45	Single ANOVA for gross revenue for first and second group sample in 2013	194
46	Single ANOVA for net income for first and second group sample in 2013	196
47	Single ANOVA for Cost of production for third and fourth group sample in 2013	198

48	Single ANOVA for gross revenue for third and fourth group sample in 2013	200
49	Single ANOVA for net income for third and fourth group sample in 2013	202
50	The relative importance of cost of production items and the profitability rate of return per feddan of conventional corn for the study sample in 2013	208
51	The relative importance of cost of production items and the profitability rate of return per feddan of biotech corn for the study sample in 2013	209
52	The relative importance for different means of managing agricultural genetic engineering biotechnology according to the sample in 2013	211
53	The impact of genetic engineered biotech crops on human health according to the sample in 2013	213
54	The relative importance of the main problems hindering planting genetic engineered biotech crops in Egypt according to the sample in 2013	215
55	Relative importance of the means for spreading the knowledge about genetic engineering biotechnology in agriculture according to the sample in 2013	217
56	The relative importance for the proposed marketing channels according to the sample in 2013	219
