List of Abbreviations

BDDE	B utane D iol D iglycidyl E ther
BTxA	B otulinum T oxin A
CaHA	C alcium h ydroxyl A patite
HA	H yaluronic A cid.
NASHA	N on- A nimal S tabilized H yaluronic A cid
PLLA	P oly- L - L actic A cid
PMMA	P oly M ethyl M eth A crylate
SLR	S ingle L ens R eflex
SMAS	S uperficial M uscular A poneurotic S ystem
S-STE	S kin- S oft T issue E nvelop

List of Figures

<i>Fig no.</i>	<i>title</i>	<i>page no.</i>
Figure (1):	Dieffenbach's method of external excisions to alter the size of the nose.....	13
Figure (2):	Facial relative skin thickness map.....	17
Figure (3):	Anatomical dissection showing nasal muscles: nasal-labial area after skin resection.....	21
Figure (4):	Anatomical dissection showing procerus muscles: radix after skin resection.....	23
Figure (5):	Anatomical dissection showing nasal muscles: nasal pyramid after skin resection.....	25
Figure (6):	Anatomical dissection showing nasal muscles: nasal pyramid after skin resection.....	25
Figure (7):	Anatomical dissection showing depressor septi and myrtiformis muscles.....	28
Figure (8):	Nasal SMAS anatomical dissection.....	28
Figure (9):	Nasal SMAS ligaments.....	30

List of figures (cont.)

Figure (10): Nasal SMAS deep layer.....	30
Figure (11): External arterial vascularization of the nose.....	36
Figure (12): External arterial vascularization of the nose and nasal danger zone.....	37
Figure (13): Differences between male and female ideals for the nasofrontal (NFr) and nasolabial (NL) angles.....	42
Figure (14): The head of the queen Nefertiti 1365 BC (Berlin State museum, Berlin, Germany).....	48
Figure (15): The same patient is photographed twice before the procedure.....	52
Figure (16): While HA injection results can be seen immediately, in case of botulinum injections, at least 5 days are needed.....	57
Figure (17): Over time, the carrier gel is gradually absorbed and the calcium hydroxylapatite particles remain.....	71
Figure (18): Local histiocytic and fibroblastic response at the site appears to result in the production of new collagen around the microspheres.....	72

List of figures (cont.)

Figure (19): Vascular anatomy of the midface.....	84
Figure (20): Three days after the injection. Crusted papules are visible in the distribution of the angular artery	92
Figure (21): Four months after the occlusive incident.	92
Figure (22): Drawings depicting injection techniques: serial puncture	96
Figure (23): Harvesting and injection cannula.....	98
Figure (24): Entry points and injection paths to the zones being corrected.....	100
Figure (25): Cannulas used by the author since 1998 to perform atraumatic harvest of 2- to 3-mm fat fragments.....	101
Figure (26): Macroscopic view of cryopreserved fat graft 2 years after harvesting.....	105
Figure (27): Preoperative view of a patient after a previous rhinoplasty and Postoperative view at 6 months showing nasal lipoinplantation and touch-up procedure to improve dorsal and tip contours.....	106

List of figures (cont.)

- Figure (28):** Transcutaneous approach: two injection points, one at each side of the medial crura....110
- Figure (29):** Transcutaneous approach: one injection point at the base of the columella.....111
- Figure (30):** Injection of BNT-A at the base of the collumella.....112
- Figure (31):** The m. depressor septi nasi fibers run upwards to the tip of the nose Injection of BNT-A at the middle portion of the collumella is ideal for those patients who present a long upper lip113
- Figure (32):** The blocking of the m. depressor septi nasi promotes a slight lifting and upward rotation of the tip of the nose.....114
- Figure (33):** Treatment algorithm for development of patient care treatment plan115
- Figure (34):** Restylane package 0.5 and 1cc and Emla 5 % cream.122
- Figure (35):** Emla cream 5%, alcohol pad, needles and insulin e syringe used in fat injection.....124
-

List of figures (cont.)

Figure (36): Pseudohump injected with Restylane above and below the hump pre and post pictures (our case).....	131
Figure (37A,B): Mild C shape deviation of the dorsum, right side depression over the cephalic end of LLC, depression over the upper end of the Rt. nasolabial fold and assymetrical nostrils (our case).....	133
Figure (38A,B,C): Pollybeak deformity after many rhinoplasties, low dorsum, depression over the left LLC and low dorsum, pre and post.....	134

List of Tables

<i>Table no.</i>	<i>title</i>	<i>page no.</i>
Table (1):	Nasal muscles gouted.....	18
Table (2):	Measurement items.....	44
Table (3):	The Seven Deadly Traits.....	53
Table (4):	Clinical literature overview of use of dermal fillers in nonsurgical rhinoplasty.....	59
Table (5):	ASAPS member statistics year on year comparisons for dermal filler products.....	60
Table (6):	Patient Demographics.....	77
Table (7):	Clinical Improvement in Patients Treated With Microfat Injection, as Rated by Both the Author and Patient.....	77
Table (8):	Suggested treatment for particulate filler vascular compromise.....	85
Table (9):	Sources of Hyaluronidase.....	87
