MECHANICAL POWER ENGINEERING

Approved by examining committee

Prof. Dr. Essam E. Khalil — **Main Thesis Advisor**

Mechanical Power Department - Faculty of Engineering – Cairo University

Prof. Dr. Samy M. Morcos — **Internal Examiner**

Mechanical Power Department - Faculty of Engineering – Cairo University

Prof. Dr. Ahmed A. Medhat — **External Examiner**

Professor of Mechanical Power engineering at Housing & Building National Research Centre

FACULTY OF ENGINEERING, CAIRO UNIVERSITY
GIZA, EGYPT
2015

ACKNOWLEDGEMENT

I hereby would like to express my deep gratitude and thanks to **Prof. Dr. Essam E. Khalil** and **Dr. Esmail M. Bialy** for the support, continuous encouragement and distinctive supervision throughout the course of this work. They helped providing me with up to date technical references that were of great help in the present work. In addition, they contacted FLUENT personnel in order to negotiate for a free academic version of ANSYS 15 CFD package. Furthermore, they encouraged me to produce several technical papers as a co-author with him and provided the required support for these papers to be accepted.

Also, I cannot express; in words; my thanks and gratitude to **my family** for their great and continuous help and support they provided me to finish this work in a suitable form.

Nevertheless, I cannot forget the support of **my colleagues** in the Mechanical Power Engineering department as well as from my Professors for their encouragement and concern throughout the scope of the work.

Finally, I should express my gratitude for the FLUENT® personnel for their kind interest in the current project and their support via supplying us with a free license of the ANSYS 15 CFD package.

LIST OF CONTENTS

SUBJECT	PAGE
ACKNOWLEDGEMENT	i
CONTENTS	ii
LIST OF TABLES	v
LIST OF FIGURES	vi
SYMBOLS AND ABBREVIATIONS	xiii
ABSTRACT	xvi
CHAPTER 1: INTRODUCTION	1
1.1 Personal Factors	2
1.2 Environmental Factors	2
1.3 Room Air Distribution	4
1.3.1 Mixed air distribution	5
1.3.2 Fully stratified air distribution	7
1.3.3 Partially mixed air distribution	9
CHAPTER 2: LITERATURE REVIEW	12
2.1 Introduction	12
2.2 Papers Concerned With General Flow Investigations in Enclosed Space	14
2.3 Summary and Scope of Present Work	24
CHAPTER 3: GOVERNING EQUATIONS	25
3.1 Introduction	25
3.2 Navier-Stokes Equations	25
3.3 Turbulence Modeling	28
3.3.1 What Is Turbulence?	28

3.3.2 Classical Turbulence Models 29

3.3.3 The *k*-Є Model 30

3.3.4 Governing Equation for Turbulent Kinetic Energy k 31

CHAPTER 4: EXPERIMENTAL INVESTIGATION AND VALIDATION 33

4.1 Introduction 33

4.2 Description of Office space Configuration 33

4.3 Measuring Instruments 34

4.4 Measuring Locations 34

4.5 Experimental Procedure 36

4.6 Experimental Results 37

4.7 Assessment of CFD Modelling Validation 38

4.8 Validation Results 39

4.9 Conclusions on Validation Results 52

CHAPTER 5 PARAMETRIC CASE STUDY 53

5.1 Fanger's Model 53

5.2 Model Description 57

5.2.1 Office Layout 57

5.2.2 Occupant's model 57

5.3 Boundary Conditions 58

5.4 Summary of the modelled case studies. 60

5.5 Mesh generation and mesh independency test. 71

CHAPTER 6 RESULTS AND DISCUSSIONS 73

6.1 Results of 1st case study. 74

6.1.1 Results of 1st case study at ACH = 5. 74

6.1.2 Results of 1st case study at ACH = 6. 78

6.1.3 Results of 1st case study at ACH = 7. 81

6.2 Results of 2nd case study. 84

6.2.1 Results of 2nd case study at ACH = 5. 84

6.2.2 Results of 2nd case study at ACH = 6. 88

6.2.3 Results of 2nd case study at ACH = 7. 91

6.3 Results of 3rd case study. 94

6.3.1 Results of 3rd case study at ACH = 5. 94

6.3.2 Results of 3rd case study at ACH = 6. 97

6.3.3 Results of 3rd case study at ACH = 7. 100

6.4 Results for base case configuration at different ACH (Case 1). 103

6.5 Results of UFAD system: 105

6.5.1 Results of 4th case study (UFAD system in case of not using any partition). 105

6.5.2 Results of 5th case study (UFAD system in case of using a complete partition). 111

6.5.3 Results of 6th case study (UFAD system in case of using a partial partition. 117

6.6 The effect of underfloor diffuser type on the level of thermal comfort in the office space. 123

CHAPTER 7 CONCLUSIONS AND RECOMMENDATIONS FOR FUTURE WORK 132

7.1 Introduction 132

7.2 Conclusions of the Present Work 132

7.3 Recommendations for Future Work 133

LIST OF TABLES

Table	Description	Page
2.1	Summary for the selected literature work	12
2.2	Outer wall and window boundary conditions for the cases considered in the study	23
3.1	Turbulence Models	28
4.1	Measurements Lines Coordinates	36
4.2	Measurements in the plane Z = 1.5 m (middle of the office space)	37
5.1	Terms used in the predicted mean vote (PMV)	54
5.2	Equations for components of the heat balance equation used by Fanger in determining the PMV thermal comfort equations	55
5.3	The main dimensions of the PC, Occupant, chair, and the desk.	58
5.4	The Configuration details for 1st Case study.	60
5.5	Numerical values for the Locations of air supply inlets.	62
5.6	Numerical values for the Locations of air return outlets.	62
5.7	The Configuration details for 2nd Case study	63
5.8	Numerical values for the Locations of air supply inlets.	64
5.9	Numerical values for the Locations of air return outlets.	65
5.10	The Configuration details for 3rd Case study.	65
5.11	Numerical values for the Locations of air supply inlets.	67
5.12	Numerical values for the Locations of air return outlets.	67
5.13	The Configuration details for the 4th, 5th, and 6th Case study.	68
5.14	Numerical values for the spaces between air supply inlets.	71
5.15	Element size (m) Vs. Number of cells.	72

LIST OF FIGURES

Figure	Description	Page
1.1	Personal and environmental factors that affect thermal comfort	1
1.2	Classification of Air Distribution Strategies	5
1.3	Air Supplied at Ceiling Induces Room Air into Supply Jet	7
