FACULTY OF ENGINEERING, CAIRO UNIVERSITY  
GIZA, EGYPT  
2016

**Engineer's Name:** Ahmed Mahmoud Khalil  
**Date of Birth:** 23/01/1990  
**Nationality:** Egyptian  
**E-mail:** Ahmedkhalil\_2011@ymail.com  
**Phone:** 01004994954  
**Address:** Ard El- Lawaa, Giza, Egypt  
**Registration Date:** 30/ 09/2011  
**Awarding Date:** ....../.....  
**Degree:** Master of Science  
**Department:** Structural engineering

**Supervisors:**

Prof. Osman.M.Osman.Ramadan

**Examiners:**

Prof. Osman.M.Ramadan (Thesis main advisor)  
Prof. Atef.S.Gandy (Internal examiner)  
Prof. Gouda.M.Ghanem (External examiner)

**Title of Thesis:**

RESPONSE OF STRUCTURES TO SMALL AND MEDIUM  
BLAST LOADS

**Key Words:**

Blast loads; Explosions; Barriers; Chambers; Concrete Nonlinearity

**Summary:**

Civil engineering structures are sometimes subjected to small and medium blast loads. This study investigates the effects of material nonlinearity, reinforcement ratio, and structure shape on the performance of chambers and barriers subjected to blast loads.

The results showed that the linear analysis of blast loads is more conservative than the nonlinear one as it produces higher stress values. However, linear deformations are less than their corresponding nonlinear ones. For explosions inside rooms, increasing the reinforcement ratio decreased the damage index, the stresses, and the deformations. For barriers, the use of small radius of curvature led to a decrease in damage index and critical stresses. Compared to rectangular rooms, circular rooms showed less damage index, smaller stress, and smaller deformations.

## **Acknowledgments**

Thanks to ALLAH for his great mercy and support. I would like to express my deep sense of respect and gratitude towards my advisor Prof. Dr. Osman.M.Ramadan for his continuous support, advice, and guidance through out my work.

Special thanks and gratitude to Dr. Mohamed.G.El-sherbiny, lecturer at Future University, for his generous help during preparation of the numerical models using AUTODYN.

I would like to thank my parents and my brother, who have been the source of my strength and encouragement throughout this journey. I am thankful to all my friends for giving me help and support throughout my work, especially, my best friend Youssef Soliman.
