*Faculty of Dentistry
Alexandria University*

1999

ACKNOWLEDGMENT

First of all, thanks is due to *God* the most beneficent and most merciful.

I would like to express my deepest appreciation and sincerest gratitude to *Prof. Dr. Ahmed Abdella*, Vice Dean for Community development and Environmental affairs and Professor of Pedodontics and Dental Public Health, Faculty of Dentistry, Alexandria University, for his precious time and effort, he graciously gave for the accomplishment of this work. His valuable supervision, ultimate support and continuous guidance were undoubtedly of essential help in this research.

My love, appreciation, special thanks and gratitude to *Dr. Hala Amer*, Assistant Professor of Dental Public Health, Faculty of Dentistry, Alexandria University. I will never forget her supreme generosity, help and encouragement all the time. Her continuous guidance and great support will be forever appreciated.

I am greatly indebted to *Dr. Nihad Hassan*, lecturer of biostatistics, the High Institute of Public Health, Alexandria University, for her great job and valuable help she offered in the statistical work of this study.

My thanks to *Dr. Randa Yousef*, lecturer of Public health, Faculty of Medicine, Alexandria University, for the help she gave in the statistical part of this work, as well.

My special thanks and gratitude to *Prof. Dr. Salah Hassouna*, Professor of Microbiology at the Environmental Studies Department, Institute of Graduate Studies and Research, Alexandria University. His valuable and true knowledge about fluoride analysis was of great help.

My sincere appreciation to all the *authorities* in the schools and factories I visited, for their great help and cooperation without which this research could not have been done, especially *Dr. Mourad Aly Hassan*, dental director of the Northwest Delta Health Insurance Organization in Alexandria.

Finally, I would like to express my deepest appreciation to all my *professors, colleagues and staff members*, for their continuous encouragement, support and cooperation.

Dedication

*To my parents,
my husband and
my wonderful son,
for their love, support and
understanding.*

LIST OF TABLE

No	Title	Page
1	Distribution of the study sample by age, sex, location and type of school.	98
2	Distribution of the school-age population by district and type of school.	100
3	Percentage of caries-free 12 and 15 year-old age groups by sex, location and type of school.	102
4	The mean caries experience (DMFT) and its components among the 12 year-old age group by sex, location and type of school.	106
5	The mean caries experience (DMFT index) and its components among the 12 year-old urban children by sex.	108
6	The mean caries experience (DMFT index) and its components among the 12 year-old age group by location and type of school.	110
7	The mean caries experience (DMFT index) and its components, among the 15 year-old age group by sex, location and type of school.	113
8	The mean caries experience (mean DMFT) and its components among the 15 year-old urban children by sex.	115
9	The mean caries experience (DMFT index) and its components among the 15 year-old age group by location and type of school.	118

LIST OF TABLE CON.

No	Title	Page
10	Caries experience (DMFT index) of the 12 and 15 year-old age groups by districts.	120
11	The mean caries experience (dft index) of deciduous teeth and its components among the 12 year-old age group by location and type of school.	129
12	The mean caries experience (dft index) of deciduous teeth and its components among the 15 year-old age group by location and type of school.	131
13	Mean caries experience (dft index) of the deciduous dentition among the 12 and 15 year-old age groups by districts.	133
14	Distribution of the applied pit and fissure sealant among the 12 and 15 year-old age groups by sex, location , and type of school.	135
15	Dental caries treatment needs among the 12 year-old age group by sex, location and type of school.	140
16	Percentage of caries treatment needs among the 12 year-old age group by sex, location and type of school.	143
17	Dental caries treatment needs among the 15 year-old age group by sex, location and type of school.	146
18	Percentage of caries treatment needs among the 15 year-old age group by sex, location and type of school.	149

LIST OF TABLE CON.

No	Title	Page
19	Percentage of 12 and 15 year-old students needing partial dentures (prosthetic replacement) by sex, location and type of school.	151
20	Prevalence of periodontal disease (CPITN) among the 12 year-old age group by sex, location and type school.	156
21	Mean number of sextants affected with periodontal disease (CPITN) among the 12 year-old age group by sex, location and type of school.	159
22	Mean number of sextants affected with periodontal disease (CPITN) among the 12 year-old urban children by sex.	161
23	Mean number of sextants affected with periodontal disease (CPITN) among the 12 year-old children by location and type of school.	163
24	The mean number of sextants affected with periodontal disease (CPITN) among the 12 year-old age group by districts.	165
25	Prevalence of periodontal disease (CPITN) among the 15 year-old age group by sex, location and type school.	168
26	Mean number of sextants affected with periodontal disease (CPITN) among the 15 year-old age group by sex, location and type of school.	171
27	Mean number of sextants affected with periodontal disease (CPITN) among the 15 year-old urban children by sex.	173

LIST OF TABLE CON.

No	Title	Page
28	Mean number of sextants affected with periodontal disease (CPITN) among the 15 year-old children by location and type of school.	176
29	The mean number of sextants affected with periodontal disease (CPITN) among the 15 year-old age group by districts.	179
30	Percentage of subjects needing periodontal treatment among the 12 year-old age group by sex, location and type of school.	185
31	Percentage of subjects needing periodontal treatment among the 15 year-old age group by sex, location and type of school.	187
32	Prevalence of fluorosis assessed by Dean's Index among the 12 year-old age group by sex, location and type of school.	190
33	Prevalence of fluorosis among the 12 year-old age group by district.	193
34	Prevalence of fluorosis among the 12 year-old age group by location and type of school.	195
35	Prevalence of fluorosis assessed by Dean's Index among the 15 year-old age group by sex, location and type of school.	198

LIST OF TABLE CON.

No	Title	Page
36	Prevalence of fluorosis among the 15 year-old age group by district.	200
37	Prevalence of fluorosis among the 15 year-old age group by location and type of school.	202
38	Dean's community fluorosis index among the 12 and 15 year-old children by district.	208
39	Prevalence of malocclusion among the 12 year-old age group by sex, location and type of school.	211
40	Prevalence of different types of malocclusion among the 12 year-old age group by sex, location and type of school.	214
41	Prevalence of malocclusion among the 12 year-old age group by district.	216
42	Prevalence of malocclusion among the 15 year-old age group by sex, location and type of school.	218
43	Prevalence of different types of malocclusion among the 15 year-old age group by sex, location, and type of school.	221
44	Prevalence of malocclusion among the 15 year-old age group by district.	223
45	Prevalence of malocclusion among the 12 and 15 year-old age groups by sex, location and type of school.	225
46	Prevalence of malocclusion among the 12 and 15 year-old age groups by district.	227
