**PREPARATION OF DENTAL AMALGAM
ALLOYS AND STUDYING THEIR PHYSICAL
AND MECHANICAL PROPERTIES**

THESIS

**SUBMITTED IN PARTIAL FULFILLMENT FOR THE
DEGREE OF MASTER IN MATERIALS TECHNOLOGY**

PRESENTED BY

RANDA ANIS ISHAK

B. Sc. (Chemical Engineering)

747
C

Department of Materials Science,
Institute of Graduate Studies and Research,
Alexandria University

1995

SUPERVISORS

PROF. MOSTAFA FAKHRY KHALIL

Department of Dental Materials,
Faculty of Dentistry,
Alexandria University.

PROF. AHMED SAFWAT EL-KHADY

Department of Postoperative Dentistry,
Faculty of Dentistry,
Alexandria University.

ASS. PROF. MOHAMED AWAD KHATTAB

Department of Materials Science,
Institute of Graduate Studies and Research,
Alexandria University.

DEDICATED

To MY PARENTS

A WORD OF THANKS

It is with gratitude that I hereby acknowledge the assistance of many who contributed significantly to accomplish this thesis.

Special thanks to Prof. S. H. Kandil, who first introduced me to the field of Materials Science, guided my research in its early stage, and kept the wheels turning when they would otherwise have ground to a halt.

I am deeply indebted to Prof. M. F. Khalil, for his tireless expert guidance, splendid and useful suggestions, he offered me throughout this research. He gave me much of his time, effort, and indispensable help.

I am grateful to Prof. A. S. El-Kady, for his close supervision, kind guidance and continuous encouragement all through the course of this investigation.

I gladly acknowledge Asst. Prof. M. A. Khattab, for sincere help and supervision.

A special note of appreciation goes to some faithful friends: Sissy, Mary, Sayed and Rafik, who helped me to get across the finish line.

Finally, I am humbly thankful to the Lord, for his presence, so real and manifest, directing me in the work.

TABLE OF CONTENTS

LIST OF FIGURES	v
LIST OF TABLES	viii
ABSTRACT	ix
 CHAPTER I : INTRODUCTION	 1
 I.1. HISTORICAL DEVELOPMENT	 3
I.2. COMPOSITION	6
I.2.1 The silver-tin binary system	6
I.2.2. The role of alloying elements	8
 I.3. CLASSIFICATION OF DENTAL AMALGAMS AND THEIR ALLOYS	 10
I.3.1 Conventional or low copper amalgam alloys.....	10
I.3.2 High copper or copper enriched amalgam alloys.....	10
a. Admixed amalgam alloys	12
b. Single composition amalgam alloys	12
 I.4. MANUFACTURE OF AMALGAM ALLOY POWDERS	 13
I.4.1 Lath-cut amalgam alloy powder	13
I.4.2 Spherical amalgam alloy powder	14
I.4.3 Admixed amalgam alloy powder	15
 I.5. PARTICLE SIZE AND SHAPE	 16
 I.6. AMALGAMATION REACTIONS	 18

1.6.1. Low copper amalgam alloys	18
1.6.2. Admixed amalgam alloys	19
1.6.3. Single composition amalgam alloys	21
1.7. PROPERTIES OF DENTAL AMALGAMS	23
1.7.1 Compressive strength	23
1.7.2 Dimensional changes during setting	25
1.7.3 Creep	26
AIM OF THE WORK	28
 CHAPTER II : MATERIALS AND EXPERIMENTAL WORK	 29
II.1 PREPARATION OF DENTAL AMALGAM ALLOY	
POWDER	29
II.1.1 Materials	29
II.1.2 Design of the alloys	29
II.1.3 Preparation of the ingots	32
II.1.4 Homogenization heat treatment	33
II.1.5 Commination	33
II.1.6 Aging	33
II.1.7 Acid washing	34
II.1.8 Amalgamation	34
 II.2. CHARACTERIZATION OF DENTAL AMALGAMS AND	
THEIR ALLOYS	35
II.2.1 Thermal characterization	35
II.2.2 Microstructure and phase identification	38
a. X-ray diffraction analysis (XRD)	38

b. Scanning electron microscopy (SEM) and Energy dispersive spectroscopy (EDS)	39
II.2.3 Particle size distribution	41
II.2.4 Mechanical properties measurements	42
a. Compressive strength	42
b. Hardness	45
CHAPTER III : RESULTS	46
III.1. CHARACTERIZATION OF ALLOY POWDERS AND THEIR AMALGAMS	46
III.1.1 Low copper alloy powders and amalgams (2-6 wt% Cu)	46
a. Low copper alloy powders	46
b. Low copper amalgams	46
III.1.2 High copper alloy powders and amalgams (15-30 wt% Cu) ..	53
a. High copper alloy powders	53
b. High copper amalgams	71
III.2. PARTICLE SIZE DISTRIBUTION OF ALLOY POWDERS	82
III.3. MECHANICAL PROPERTIES	86
III.3.1 Compressive strength	86
III.3.2 Hardness	86
CHAPTER IV : DISCUSSION	88
CONCLUSION	103

LIST OF FIGURES

Figure	Page
1 The silver -tin binary phase diagram	7
2 The silver-copper-tin ternary system.....	11
3 Schematic drawings illustrate the sequence of development of amalgam microstructure when lath-cut low copper alloy particles are mixed with mercury.....	20
4 standerized plastic die for amalgam samples preparation and the 1x2 mm amalgam specimens.	36
5 The mould of the amalgam specimen preparation for compressive strength measurement.....	43
6 SEM micrograph of alloy powder A (2 wt% copper) (x1000).....	47
7 SEM micrograph of alloy powder B (4 wt% copper) (x 2000)	47
8 SEM micrograph of alloy powder C (6 wt% copper) (x 2000).....	48
9 EDS analysis on amalgam alloy B , <i>light phase</i>	49
10 EDS analysis on amalgam alloy B , <i>dark phase</i>	49
11 X-ray diffraction pattern for amalgam alloy powder A	50
12 X-ray diffraction pattern for amalgam alloy powder B	50
13 X-ray diffraction pattern for amalgam alloy powder C	51
14 DTA curves for amalgam samples A, B and C	52
15 SEM micrograph of amalgam A showing the different phases (x 5000)	54
16 SEM micrograph of amalgam A showing the γ_2 phases	54
17 SEM micrograph of amalgam B (x 150)	55
18 SEM micrograph of amalgam C (x150)	55
19 SEM micrograph of amalgam C showing the presence of large voids (x1500).....	56
20 EDS analysis of amalgam sample A, <i>grey area</i>	57

21	EDS analysis of amalgam sample A, <i>light area</i>	57
22	EDS analysis of amalgam sample A, <i>dark area</i>	58
23	X-ray diffraction pattern for amalgam sample A	59
24	X-ray diffraction pattern for amalgam sample B	59
25	X-ray diffraction pattern for amalgam sample C	60
26	SEM micrograph of alloy powder sample D (15 wt% Cu) (x1500) ..	61
27	SEM micrograph of alloy ingot D (15 wt% copper) (x500)	61
28	SEM micrograph of alloy ingot E (20 wt% copper) (x500)	62
29	SEM micrograph of alloy powder E (20 wt% copper) (x1000)	62
30	SEM micrograph of alloy powder F (25 wt% copper) (x1000)	63
31	SEM micrograph of alloy ingot F (25 wt% copper) (x1000)	63
32	SEM micrograph of alloy ingot F (25 wt% copper) (x500)	63
33	SEM micrograph of alloy ingot G (30 wt% copper) (x500)	64
34	SEM micrograph of alloy ingot E (30 wt% copper) (x500)	64
35	SEM micrograph of alloy ingot G (30 wt% copper) (x5000)	64
36	EDS analysis on amalgam alloy sample D, <i>light area</i>	66
37	EDS analysis on amalgam alloy sample D, <i>dark phase</i>	66
38	X-ray diffraction pattern for amalgam alloy powder sample D	67
39	X-ray diffraction pattern for amalgam alloy powder sample E	67
40	X-ray diffraction pattern for amalgam alloy powder sample F	68
41	EDS analysis on alloy powder sample G, <i>light phase</i>	69
42	EDS analysis on alloy powder sample G, <i>dark phase</i>	69
43	X-ray diffraction pattern for amalgam alloy powder sample G	70
44	DTA curves for high copper amalgam alloys (Samples D to G)	72
45	SEM micrograph of amalgam sample D (x150)	73
46	SEM micrograph of amalgam sample E (x500)	74
47	SEM micrograph of amalgam sample E show the different morphology of the Cu-Sn phase (x1000)	74
48	SEM micrograph of amalgam sample F show the reaction zone (x1500)	75
