

Characterization of Multilayer Microfluidics for Biomedical Applications

THESIS

*Submitted to faculty of science-Ain Shams University in partial
fulfillment for Degree of Ph.D. in Biophysics*

By

Amina Yousef Yousef Omar

M.Sc. in Biophysics 2010

Supervised by

Prof. Dr.

El-Sayed Mahmoud El-Sayed

Professor of Biophysics
Physics Department
Faculty of Science
Ain Shams University

Prof. Dr.

Mona Salah El-Din H. Talaat

Professor of Biophysics
Physics Department
Faculty of Science
Ain Shams University

Prof. Dr.

Medhat A. Abdel Khalek Ibrahim

Professor and Head of Spectroscopy Department
Physics Division
National Research Centre

Department of Physics
Faculty of Science
Ain Shams University
(2015)

CERTIFICATION OF APPROVAL

**Characterization of Multilayer Microfluidics for
Biomedical Applications**

By

Amina Yousef Yousef Omar

Supervisors:

Signature

Prof. Dr. El-Sayed Mahmoud El-Sayed

Professor of Biophysics - Physics Department
Faculty of Science - Ain Shams University

Prof. Dr. Mona Salah El-Din

Professor of Biophysics - Physics Department
Faculty of Science - Ain Shams University

Prof. Dr. Medhat A. A. Ibrahim

Professor of Spectroscopy - Physics Division
National Research Centre

2015

Ain Shams University

Characterization of Multilayer Microfluidics for Biomedical Applications

Name: Amina Yousef Yousef Omar

Degree: Ph.D.

Department: Physics – Biophysics Group

Faculty: Science

University: Ain Shams

Graduation Date: 2004 - Ain Shams University

Registration Date: 9/7/2012

Grant Date: 2015

ACKNOWLEDGEMENT

Thanks Allah for everything you had given me to be here now and Thanks for giving me special people in my life that I need to express, from my deep heart, my special gratitude feelings towards them. I need to thank all of you for being in my life and completing the beautiful picture of my life.

Now, I am in that part of my PhD journey that represents the most beautiful part of my life. During this journey, I moved from one place to another and in each one of these places, I met special people leaving an incredible amazing mark in my life.

Before I start my PhD journey, I need to thank the great gift from Allah to me; my small family. My great Dad “Allah bless his soul”, who is the reason of me being here and I know now he should be happy because I achieved his dream. I wish one day I can be the daughter he is proud of. My super kind Mum and the lovely smile in my life, my sister “Basma” who suffered a lot during my PhD journey. May Allah bless you all, protect you and keep you in my life. LOVE you more and more.

Let's start my PhD journey. I will start from my lovely supervisors. Thanks Allah for giving me such great supervisors who not only supervised me but also affected my life positively. I am lucky for having different supervisors with different cultures and different backgrounds.

I will start with Prof. Dr El-Sayed M. El-Sayed, the one I really respect from my deep heart and he is always patient with me since I started my MSc. thesis till being her for my PhD thesis. Thanks a lot prof. Dr. El-Sayed for everything you suffered with me but I believe I am still his stubborn daughter. Prof. Dr Mona S. El-Din, the kindest professor in our Biophysics group in my university. Thanks a lot for everything you did for me during my thesis and also during the review of the thesis.

Prof Dr. Abdel Sattar Sallam, the third shining star in our group. Thanks a lot for all your advice, comments and feedback you always give me.

Now I will go from my Biophysics group in Ain Shams university to my lovely groups in National research centre, the second home for me and the place where I can find myself there, may be because it was the first place I had training in when I was an undergraduate student then it became the first place I worked in, after my BSc in Biomaterial department with my Lovely and my idol supervisor Prof. Dr. Wafaa I. Abdel Fatah. She was the first one giving me a hand, teaching me everything for my practical work and giving me the opportunity to work in different projects in Egypt and also abroad in France and Germany. Really, I love you from my deep heart my great mum.

We are still in my home, so of course I had to find my great father and I found the one who I am his eldest girl as he always likes to tell me, Prof. Dr Medhat A. Ibrahim. He was the first one teaching me the word of team work on research and helping me understand molecular modeling. Thanks is just a small word to tell you, so I may tell you “Thanks” “Danke” “grazie” “teşekkür ederim” “谢谢” by different languages because you are different. I am lucky to be your student. Many thanks to your small family, Dr. Hanan El-Haes and your three lovely daughters.

To continue the effective supervisors of my life, I need to move to a new place that has been the most effective one in my PhD journey, Belgium. Traveling to Belgium is based on an acceptance from a great scholarship I had, CENA. CENA was not a scholarship, it was a life.

I wish to express my sincere gratitude to King Abdulaziz City of Science and Technology (KACST), Riyadh, Kingdom of Saudi Arabia for the valuable and generous CENA (Center of Excellence in Nano-manufacturing Applications) Scholarship under which the research reported in this thesis was conducted. CENA is a consortium of KACST and Intel Corporation.

The One behind CENA, the one who needs more than thanks for being in my life is my soul father “Makarem Hussein” the one without him I was not able to complete my PhD thesis. Thanks Dr. Makarem for being in my life and giving me this great opportunity to travel to a new area, interact with different people, different cultures and meet my lovely CENA friends, the friends of LIFE. Thanks is indeed a small word to describe my great feelings towards you my soul father.

Imec, Leuven, Belgium three words but I had a great life within them. That great feeling is due to the great supervisors and colleagues I met in “life, science & technology” department in imec. The one I respect most from my heart is my supervisor Tim Stakenborg. Thanks Tim for everything you taught me. I learned how to be precise and accurate regarding every small piece of data I had during my research, how to be honest, confident, clear for everything I present in order to be a great advisor in the future. I am so proud to be your student. Moreover, I need to thank all my colleagues in surface chemistry team; Sara Peeters, my daily advisor, Karolien Jans and Hilde Jans; the twins I really love and learned from them how to be creative in presenting my data and how to enjoy with everything I worked with. Also, I shall not forget Tim Steylaerts; “Tim lab” as he likes to be called on the Belgium t-shirt I received from my team, Rita Vos; the kind and helpful one in the team, Qing the clever one and Frederik Colle the DNA sequence man. Also, I shall not forget my inspiring one, Jesse Trekker. A big thanks goes to the microfluidics team; Paolo Fironi and Rodrigo for teaching me all the microfluidics setup. I would like to express my appreciation and sincere gratitude to Prof. Liesbet Lagae and Prof. Paru Deshpande. Thanks for all of you.

My PhD journey would not have been completed without my lovely friends. Thanks Allah for letting me meet such lovely, kindly friends during my life. What proves this idea; CENA friends. CENA friends are my real life in Belgium, life full of happiness, joy, love, food and travelling. We had a great journey around Europe. We visited many places in Belgium (Brussels, Ghent, Bruges, Oostende, Liege, Dinant and Tournai), Netherlands (Den Haag, Leiden and Amsterdam), Luxembourg, France (Paris, Lyon, Lille, Strasbourg, Mont-Saint-Michel and Etretat), Germany (Berlin, Dusseldorf, Freiburg, Aachen and Monschau), Switzerland (Genève and Basel), Spain (Madrid and Barcelona), Italy (Rome), Oslo in Norway and Madeira islands in Portugal. All this fun and enjoyment would not have happened without the existence of a great leader, creative mind and affectionate person, Hossam ElAnzeery. You are always the one giving me support, motivation and sharing the happy and suffering moments of my life. Thanks a lot for being in my life. The Sweetie, kind and crazy girls, Yafa and Marwa. Thanks a lot for being there. Also, I was lucky to have a lovely kind brother; Souhaib Oueslati; the green sport man, Hosny Meddeb; the kind man, Safouene Ouenzerfi and others; Islam Abdo, Ahmed Ezzat and Mahmoud Ameen. Thanks a lot for all the great memories we enjoyed together.

Finally, I want to thank all my friends in my university (Hagar, Esam, Nancy, Rasha, M. Esam, Reem, Sarah, Manar, Aya Baha, Fatma, Aya Hafez, Hadeer, M.Marzouk, M. Adel, Ibrhaim, M.Hussein, Hassan and Islam) who are always supporting me and giving me advice wherever I am.

Now the PhD journey is coming to an end but my life is continuous and waiting for a new journey soon. I hope you are always there in it.

“Thank You”

Amina Yousef Y. Omar

CONTENTS

| | |
|---|------|
| CONTENTS | i |
| LIST OF FIGURES | iv |
| LIST OF TABLES | vii |
| LIST OF ABBREVIATIONS | viii |
| ABSTRACT | x |
| CHAPTER 1: INTRODUCTION & LITERATURE REVIEW | 1 |
| 1.1 Introduction..... | 1 |
| 1.2 Microfluidics..... | 3 |
| 1.2.1 Fundamental Principles..... | 3 |
| 1.2.2 Microfabrication | 4 |
| 1.2.3 Microfluidics for Diagnosis | 5 |
| 1.3 DNA Extraction | 7 |
| 1.3.1 DNA Structure | 7 |
| 1.3.2 Solid-Phase Extraction..... | 8 |
| 1.3.2.1 Silica-Based DNA Extraction in a Microfluidic Format . | 10 |
| 1.3.2.2 Amino Coating-Based DNA Extraction | 11 |
| 1.3.3 Sequence-Specific Extraction | 12 |
| 1.3.4 Quantification of Nucleic Acids | 13 |
| 1.4 Molecular Modeling of Nucleic Acid Hybridization..... | 15 |
| 1.5 Aim of the Work | 17 |
| CHAPTER 2: MOLECULAR MODELING | 18 |
| 2.1 Molecular Modeling..... | 18 |
| 2.1.1 Molecular Mechanics (MM) | 19 |
| 2.1.2 Quantum Mechanics (Electronic Structure Method) | 21 |
| 2.1.2.1 Semi-empirical Method | 22 |
| 2.1.2.2 Ab initio Method | 24 |
| 2.1.2.3 Density Functional Theory (DFT) Methods | 25 |
| 2.1.3 Quantitative Structure Activity Relationship(QSAR) | 29 |
| 2.1.3.1 Electronic Parameters | 31 |
| 2.1.3.2 Hydrophobic (Lipophilic) Parameter..... | 34 |

| | | |
|--|--|-----------|
| 2.1.3.3 | Steric Parameters | 35 |
| 2.2 | Computational Details | 37 |
| 2.2.1 | Optimized Geometry..... | 38 |
| 2.2.2 | Electronics Properties | 39 |
| 2.2.3 | QSAR Properties..... | 40 |
| CHAPTER 3: EXPERIMENTAL WORK..... | | 41 |
| 3.1 | Chitosan Functionalization on Silicon Surface..... | 43 |
| 3.1.1 | Silicon Substrate | 43 |
| 3.1.2 | Silica Beads..... | 44 |
| 3.1.3 | Silicon Micro-pillars | 44 |
| 3.1.3.1 | Micro-pillar Filter Fabrication..... | 44 |
| 3.1.3.2 | Fluidic Setup and Sample Loading..... | 47 |
| 3.1.3.3 | Coating of Micro-pillar Filter with Chitosan..... | 48 |
| 3.1.3.4 | Crosslinking of Glutaraldehyde on Chitosan-Coated Micro-pillar Filter | 48 |
| 3.1.4 | Characterization Tools | 49 |
| 3.1.4.1 | Fourier Transform Infra-Red Spectroscopy (FT-IR)..... | 49 |
| 3.1.4.2 | Contact Angle | 49 |
| 3.1.4.3 | Profilometry | 49 |
| 3.1.4.4 | Scanning Electron Microscope (SEM) | 50 |
| 3.2 | DNA Extraction | 51 |
| 3.2.1 | Solid-Phase DNA Extraction | 51 |
| 3.2.1.1 | DNA Extraction by Chitosan-Coated Silica Beads | 52 |
| 3.2.1.2 | DNA Extraction by Chitosan-Coated Micro-pillar Filter | 53 |
| 3.2.1.3 | DNA Extraction by Cross-linked Chitosan-Coated Micro- pillar Filter | 54 |
| 3.2.2 | Sequence-Specific DNA Extraction | 55 |
| 3.2.2.1 | Immobilization of Aldehyde ssDNA onto Chitosan-Coated Micro-pillar Filter | 56 |
| 3.2.2.2 | DNA Hybridization | 57 |
| 3.2.3 | DNA Quantification..... | 59 |
| 3.2.3.1 | UV-nanodroplet | 59 |

| | |
|---|-----------|
| 3.2.3.2 Fluorescence | 59 |
| CHAPTER 4: RESULTS AND DISCUSSION | 61 |
| 4.1 DNA Extraction on Functionalized Silicon Surface | 62 |
| 4.1.1 Chitosan Functionalization on Silicon Surface | 62 |
| 4.1.1.1 Silicon Substrate | 62 |
| 4.1.1.2 Silica Beads | 64 |
| 4.1.1.3 Silicon Micro-pillars | 65 |
| 4.1.2 DNA Extraction | 67 |
| 4.1.2.1 Solid-Phase DNA Extraction | 67 |
| 4.1.2.1.1 DNA Extraction by Chitosan-Coated Silica Beads | 67 |
| 4.1.2.1.2 DNA Extraction by Chitosan-Coated Micro-pillar Filter | 68 |
| 4.1.2.1.3 DNA Extraction by Cross-linked Chitosan-Coated Micro-pillar Filter | 69 |
| 4.1.2.2 Sequence-Specific DNA Extraction | 74 |
| 4.1.2.2.1 Immobilization of Aldehyde ssDNA onto Chitosan- Coated Micro-pillar Filter | 74 |
| 4.1.2.2.2 DNA Hybridization | 76 |
| 4.2 Molecular Modeling of DNA Hybridization on Functionalized Silicon Surface | 82 |
| 4.2.1 Optimized Structures | 82 |
| 4.2.1.1 Chitosan-Functionalized Silicon Dioxide Substrate | 82 |
| 4.2.1.2 Aldehyde 5'-(TTCA) probe on chitosan-functionalized silicon dioxide substrate | 84 |
| 4.2.1.3 Hybridization of Target DNA 3'-(AAGT) on Aldehyde 5'- (TTCA) probe on Chitosan-Functionalized Silicon Dioxide Substrate | 86 |
| 4.2.2 Electronic Properties | 87 |
| 4.2.3 QSAR Properties | 90 |
