PRODUCTION OF SOME HIGH SPECIFIC ACTIVITY RADIOISOTOPES

B114A

Thesis Submitted by

Mohamed Mostafa Abd El-Hamid Abd El-Salam

B.Sc. (Chemistry) 1995

Radioactive Isotopes and Generators Dept., Hot Labs. Center,
Atomic Energy Authority

To

**Faculty of Science (Benha)
Zagazig University**

For

The Award of M. Sc. Degree in Chemistry

Supervised by

Prof. Dr. M. A. Mousa

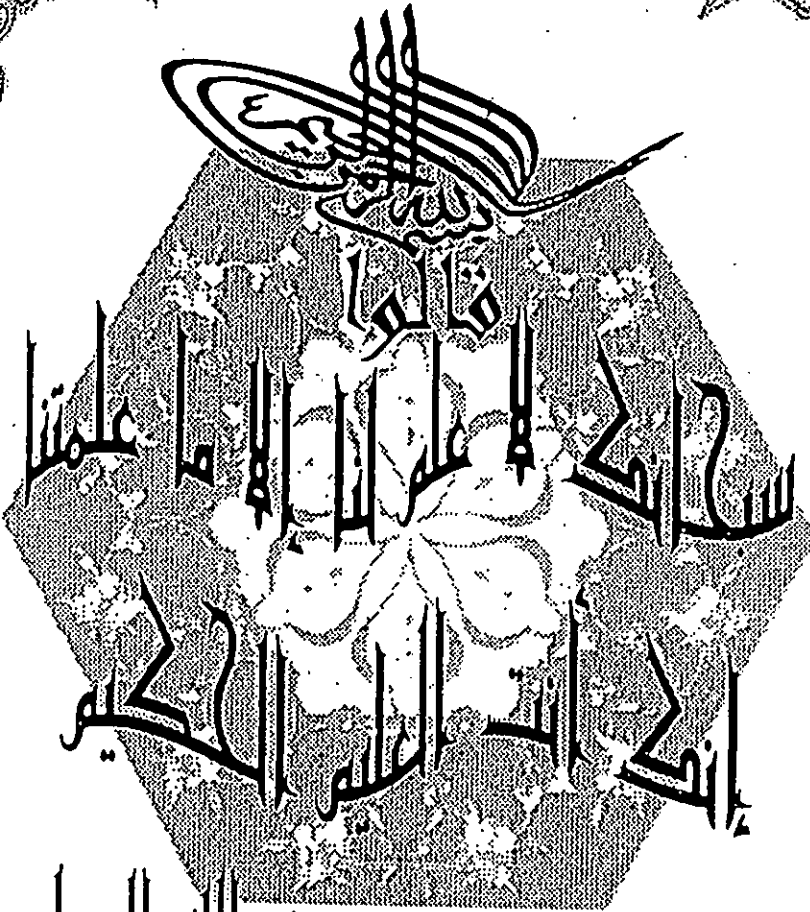

Prof. of Physical Chemistry and Former
Dean of Faculty of Science (Benha),
Zagazig University

Prof. Dr. H. F. Aly

Prof. of Nuclear Chemistry and
Former President of Atomic
Energy Authority

Prof. Dr. M. A. El-Absy

Prof. of Inorganic Radiochemistry
Radioactive Isotopes and Generators Dept.,
Hot Labs. Center,
Atomic Energy Authority

صلى الله عليه وسلم

سورة البقرة
(آية: ٣٢)

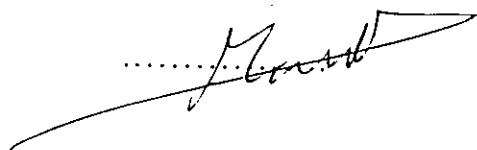

PRODUCTION OF SOME HIGH SPECIFIC ACTIVITY RADIOISOTOPES

Advisors:

1- Prof. Dr. M. A. Mousa

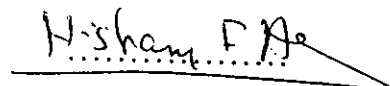

Prof. of Physical Chemistry and Former
Dean of Faculty of Science (Benha),
Zagazig University.

Approve

2- Prof. Dr. H. F. Aly

Prof. of Nuclear Chemistry and
Former President of Atomic
Energy Authority.

3- Prof. Dr. M. A. El-Absy

Prof. of Inorganic Radiochemistry
Radioactive Isotopes and Generators Dept.,
Hot Labs. Center, Atomic Energy Authority.

M. A. EL-ABSY

Approval Sheet

PRODUCTION OF SOME HIGH SPECIFIC ACTIVITY RADIOISOTOPES

Thesis Submitted by

Mohamed Mostafa Abd El-Hamid Abd El-Salam

B.Sc. (Chemistry) 1995

Radioactive Isotopes and Generators Dept., Hot Labs. Center,
Atomic Energy Authority

To

**Faculty of Science (Benha)
Zagazig University**

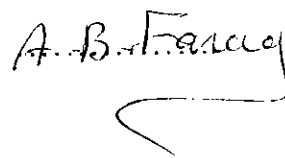

For

The Award of M.Sc. Degree in Chemistry

The Thesis has been approved by

1- Prof. Dr. A. B. Farag

Prof. of Inorganic Chemistry
and Vice Dean of Faculty of
Science, Helwan University.

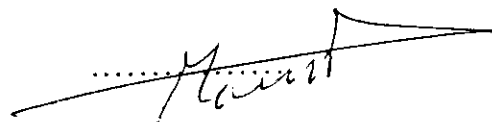

2- Prof. Dr. M. M. Ali

Prof. of Analytical Chemistry,
Nuclear Materials Authority.

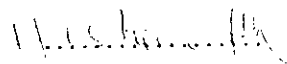

3- Prof. Dr. M. A. Mousa

Prof. of Physical Chemistry and Former
Dean of Faculty of Science (Benha),
Zagazig University.

4- Prof. Dr. H. F. Aly

Prof. of Nuclear Chemistry and
Former President of Atomic
Energy Authority.

Examination Date: 13/ 1/ 2002

ACKNOWLEDGEMENT

Before all and above, I thank and pray to **ALLAH** for unlimited help and uncountable reasons.

I would like to express my gratitude and appreciation to **Prof. Dr. Mahmoud Ahmed Mousa**, Prof. of Physical Chemistry and Former Dean of Faculty of Science (Benha)-Zagazig University, for his fruitful discussion, effective participation, and deep concern of this work.

I would like also to heartily express my sincere thanks to **Prof. Dr. Hisham Foad Aly**, Prof. of Nuclear Chemistry and Former President of Atomic Energy Authority, for his continuous scientific advice, constructive criticism, significant effort, and kind help.

My profoundly thanks and deep appreciation to **Prof. Dr. Mohamed Abd El-Salam El-Absy**, Prof. of Inorganic Radiochemistry, Radioactive Isotopes and Generators Dept., Hot Labs. Center, Atomic Energy Authority, for suggesting the topic of the thesis, planning of the experimental work, continuous following, and enormous time spent in the careful revision.

My thanks to all staff members and colleagues of Radioactive and Generators Dept., Hot Labs. Center, Atomic Energy Authority for their help in different directions.

Finally I can't forget complete assistance and encouragement of my family to complete this work.

To
my family, my friends,
and
all who will continue in the field of this work.

LIST of ABBREVIATIONS	xi
SUMMARY	xiii

CHAPTER 1

INTRODUCTION

1.1. General considerations	1
1.2. Nuclear fission reactions	2
1.2.1. Definition of the nuclear fission process	2
1.2.2. Radioactive decay of the initial fission fragments	4
1.2.3. Specific activities of ²³⁵ U-fission isotopes	5
1.2.4. Relative importance and uses of the fission products	6
1.3. Uranium targets	7
1.3.1. Irradiation behavior of uranium	7
1.3.2. Cooling of irradiated uranium targets	10
1.3.3. Dissolution of irradiated uranium targets	10
1.4. Chemistry of uranium and fission products	21
1.4.1. Chemistry of uranium	21
1.4.2. Chemistry of fission products	22
1.5. Chemical separation concepts.....	37
1.5.1. Criteria for selection of the separation process	37
1.5.2. Topics of important separation processes	38
1.5.2.1. Precipitation methods	38
1.5.2.1.1. Conditions affecting precipitation	38
1.5.2.1.2. Practical limitations of precipitation methods	39
1.5.2.2. Solvent extraction methods	39

	Page
1.5.2.2.1. Solvent extraction system and techniques	39
1.5.2.2.2. Practical limitations of solvent extraction processes	40
1.5.2.3. Ion-exchange separations	41
1.5.2.3.1. Theory and technique of ion exchange	41
1.5.2.3.2. Practical limitations of ion-exchange processes	43
1.5.2.4. Distillation	43
1.5.2.4.1. Definition and theory of distillation	43
1.5.2.4.2. Types of distillation	44
1.6. Review of some fission-products separation procedures	45
1.6.1. Separation of iodine	47
1.6.2. Separation of ruthenium	48
1.6.3. Separation of barium and strontium	51
1.6.4. Separation of zirconium and niobium	52
1.6.5. Separation of rare-earth metals	53
1.6.6. Separation of cesium	56
1.6.7. Separation of molybdenum	60
1.7. Radiochemical processing plants	68
1.7.1. Processing stages of irradiated uranium targets	68
1.7.2. Maintenance of the equipments used during processing	69
1.7.2.1. Remote maintenance	69
1.7.2.2. Direct maintenance	70
1.7.3. Radiation shielding	70
1.7.4. Radioactive waste disposal	72
1.7.5. Transportation of radioactive materials	73

CHAPTER 2

EXPERIMENTAL

2.1. Chemicals	74
-----------------------------	-----------

	Page
2.2. Equipments and apparatuses	75
2.2.1. Equipments	75
2.2.2. Apparatuses	75
2.3. Preparation and irradiation of the uranium targets	79
2.4. Chemical processing	79
2.4.1. Digestion of the irradiated uranium targets	79
2.4.2. Separation and recovery of radioiodine	81
2.4.3. Separation and recovery of radoruthenium	81
2.4.4. Batch separation of Sr, Ba, La, and Ce radionuclides	82
2.4.5. Batch separation of Zr, Nb, Te, and Np radionuclides	82
2.4.6. Separation and recovery of radiocesium	82
2.4.7. Recovery of radiomolybdenum	83
2.5. Quality control investigations	83
2.5.1. Separation and recovery yields	83
2.5.2. Radionuclidic purity	86
2.5.3. Radiochemical purity	86
2.5.4. pH-value	87

CHAPTER 3

RESULTS AND DISCUSSION

3.1. Preparation and choice of the uranium target	88
3.1.1. Target wrapper and irradiation can	88
3.1.2. Uranium targets	89
3.2. Digestion of the irradiated uranium targets	92
3.2.1. Advantages of alkali digestion over acid dissolution	92
3.2.2. The digestion technique	93
3.2. Production of radioiodine	98
3.3.1. Separation technique	104
3.3.2. Quality control of the ^{131}I product	107

	Page
3.3.2.1. Separation and recovery yields	107
3.3.2.2. Radionuclidic purity	110
3.3.2.3. Radiochemical purity	111
3.3.2.4. pH-value of the product solution	114
3.3.2.5. Radioactivity and specific activity	114
3.3.3. Precautions of separation, handling, and storage of radioiodine	116
3.4. Production of radoruthenium	118
3.4.1. Separation technique	121
3.4.2. Quality control of the ^{103}Ru product	123
3.4.2.1. Separation and recovery yields	123
3.4.2.2. Radionuclidic purity	126
3.4.2.3. pH-value of the product solution	127
3.4.2.4. Radioactivity and specific activity	127
3.4.3. Precautions of separation of radoruthenium	127
3.5. Batch separation of Sr, Ba, La, and Ce radionuclides	129
3.5.1. Separation technique	129
3.5.2. Radiometric analysis of the formed precipitate	132
3.6. Batch separation of Zr, Nb, Te, and Np radionuclides	139
3.6.1. Separation technique	139
3.6.2. Radiometric analysis of the formed precipitate	142
3.7. Production of radiocesium	151
3.7.1. Separation technique	154
3.7.2. Quality control of the ^{137}Cs product	157
3.7.2.1. Separation and recovery yields	157
3.7.2.2. Radionuclidic purity	160
3.7.2.3. Radioactivity and specific activity	160
