List of Abbreviations

NGT	→	Nasogastric Tube
TED	→	Thrombo-Embolic Deterrent
TEM	→	Total Mesorectal Excision
FVC	→	Forced Vital Capacity
FEV1	→	Forced Expiratory Volume in one second
CRP	→	C-Reactive Protein
NK cells	→	Natural Killer cells
CBC	→	Complete Blood Count
CXR	→	Chest X-Ray
MRI	→	Magnetic Resonance Imaging
CT	→	Computed Tomography
ECG	→	Electrocardiography
US	→	Ultrasound
ALT	→	Alanine Transaminase
AST	→	Aspartate Transaminase
SHP	→	Superior Hypogastric Plexus
SHN	→	Superior Hypogastric Nerves
IHP	→	Inferior Hypogastric Plexus
DCBE	→	Double Contrast Barium Enema
FOBT	→	Faecal Occult Blood Test
FDR	→	First Degree Relative
SDR	→	Second Degree Relative
SPLS	→	Single-port laparoscopic surgery

List of Figures

	Title	Page
Fig. (1)	Overview of the abdominal colon and its relations	6
Fig. (2)	Rectum in male and female	13
Fig. (3)	Blood supply of the colon	17
Fig. (4)	The portal venous circulation	20
Fig. (5)	Lymphatic Drainage of the colon	21
Fig. (6)	Rectal and anal canal arteries	24
Fig. (7)	Lymphatic drainage of rectum & anal canal	26
Fig. (8)	Gross appearance of a colectomy specimen	30
Fig. (9)	Gross appearance of a colectomy specimen	30
Fig.(10)	Micrograph of an invasive adenocarcinoma	34
Fig.(11)	Percentages of incidence of colorectal cancer in different parts of the colon	37
Fig.(12)	Colonoscopic appearance of the normal rectum and that of rectal cancer	47
Fig.(13)	Colonoscopic appearance of the normal rectum and that of rectal cancer	47
Fig.(14)	Algorithm for rectal cancer screening and surveillance in average-risk and increased-risk populations	50
Fig.(15)	Stages of colorectal cancer	62
Fig.(16)	Diagram Illustrating technique of endoscopic polypectomy	74
Fig.(17)	Illustration of Transanal Endoscopic Microsurgery Removing Rectal Cancer .	77
Fig.(18)	Diagram Illustrating Mesorectal Excision during Removal of Rectal Tumor	82

Fig.(19)	The Veress needle is held between the surgeon's thumb and index finger midway up the shaft	91
Fig.(20)	The Hasson cannula is introduced into the body	92
Fig.(21)	Optical access trocar is inserted into the abdominal wall	93
Fig.(22)	A popular laparoscopic needle driver (parrot beak) and assistant grasper	95
Fig.(23)	Specimen extraction using a plastic bag equipped with a draw string	96
Fig.(24)	Laparoscopic Straight linear cutter (SLC) stapler	99
Fig.(25)	Computerized gastrointestinal stapling devices	101
Fig.(26)	Vessel sealing devices (LigaSure) A 10 mm and B 5 mm, each with a cutting mechanism	103
Fig.(27)	Ligation of the ileocolic vessels using the LigaSure 10 mm instrument	103
Fig.(28)	Longitudinal cut- way view of ultrasonic Shears in the opened A and closed B position	105
Fig.(29)	Hand-access device	108
Fig.(30)	Positions of the cannulae for the right colectomy.	108
Fig.(31)	Definitive identification of the ileocolic pedicle is achieved by retraction at the ileocecal junction	111
Fig.(32)	From between the legs, the surgeon dissects the peritoneum overlying the ileocolic vascular pedicle over to the superior mesenteric vessels	112
Fig.(33)	The origins of the ileocolic artery and vein are identified, clipped, and divided	113
Fig.(34)	Dissection of the ventral side of the superior mesenteric vein permits a complete dissection of the root of the middle colic artery and vein	113

Fig.(35)	The peritoneum is incised along the base of the ileal mesentery upward to the duodenum	115
Fig.(36)	With earlier steps accomplished, the hepatocolic ligament is easily divided, freeing up the proximal transverse and hepatic flexure of the right colon	115
Fig.(37)	After drawing out the right colon using a wound protector, an anastomosis is accomplished extracorporeally	117
Fig.(38)	Positions of the cannulae for laparoscopic sigmoid colectomy	119
Fig.(39)	Initial dissection starts with an incision of the sigmoid mesentery at the sacral promontory with dissection cephalad posterior to the IMA	121
Fig.(40)	The IMA is divided 1–2 cm distal to its origin, or just distal to the left colic branch	123
Fig.(41)	An avascular plane exists between Toldt's fascia and the mesocolon	125
Fig.(42)	Lateral dissection then proceeds after the previous medial dissection	126
Fig.(43)	Distal bowel division is performed through the right lower quadrant cannula using an endoscopic stapler	128
Fig.(44)	Medial to lateral dissection beneath the left mesocolon provides excellent views of the distal pancreas	131
Fig.(45)	The anastomosis is then done under laparoscopic guidance	132
Fig.(46)	Pnavel Uni-X™ Single Site Laparoscopic System	141
Fig.(47)	Specially designed curved laparoscopic instruments.	141
Fig.(48)	External Trocar Arrangement using the "Single Port Access (SPA) Technique	142
Fig.(49)	Angle between the robotic arms	144

Fig.(50)	Robotic cart has one endoscope holding arm and three surgical arms	146
Fig.(51)	Open colectomy & colostomy	152
Fig.(52)	Open colectomy & colostomy	153
Fig.(53)	Scars after lap right hemicolectomy .	153
Fig.(54)	Scars after LAR & loop ileostomy reversal	154
Fig.(55)	Scars after Hartman's procedure	154
Fig.(56)	77 years old patient after laparoscopic right hemicolectomy	159
Fig.(57)	75 years old patient after laparoscopic left hemicolectomy	159
Fig.(58)	Morbidly obese patient undergoing left hemicolectomy	160
Fig.(59)	Morbidly obese patient after laparoscopic right hemicolectomy	161
Fig.(60)	T4 cancer splenic flexure invading stomach	163

List of Tables

	Title	Page
