

SERUM LEVEL OF INTERFERON-GAMMA & INTERLEUKIN-22 IN LEPROSY PATIENTS

THESIS

*Submitted for Partial Fulfillment of the Master Degree in
Dermatology and Venereology*

By

Shymaa Amer Moftah

M.B.B.Ch.

Faculty of Medicine – Ain Shams University

Under Supervision Of

PROF. DR. HANAN MOHAMED AHMED SALEH

Professor of Dermatology and Venereology
Faculty of Medicine - Ain Shams University

DR. RANIA LOTFY

Assistant Professor of Dermatology and Venereology
Faculty of Medicine - Ain Shams University

**Faculty of Medicine
Ain Shams University
2014**

وقل زدني علماً

صدق الله العظيم

سورة البقرة آية (٢٢)

Acknowledgment

*Thanks to **Allah** first and foremost. I feel always indebted to Allah; the most kind and the most merciful.*

*I would like to express my deep gratitude, appreciation, thanks and respect to **Prof. Dr. Hanan Saleh**, Professor of Dermatology and Venereology, Ain Shams University, whose guidance, patience and kindness were behind the accomplishment of this thesis.*

*I would also like to thank **Dr. Ranya Lotfy**, Lecturer of Dermatology and Venereology, Ain Shams University, for his continuous encouragement, advise, understanding and meticulous supervision.*

*I would like also to express my great thanks to **Prof. Dr. Dina El Shinawy**, Professor of Biochemistry, Department of Medical Biochemistry, Ain Shams University, for her valuable help in the laboratory assay part of this work.*

مستوى إنترلوكين 22 وإنترفيرون جاما في مصل مرضى الجذام

رسالة مقدمة للحصول على درجة الماجستير في
الأمراض الجلدية والتناسلية وأمراض الذكورة

من

طبيباً/ شيماء عامر مفتاح
بكالوريوس الطب والجراحة العامة

تحت إشراف

الأستاذة الدكتورة/ حنان محمد احمد صالح
أستاذ الأمراض الجلدية والتناسلية وأمراض الذكورة
كلية الطب - جامعة عين شمس

الدكتورة/ رانية عادل لطفي
أستاذ مساعد الأمراض الجلدية والتناسلية وأمراض الذكورة
كلية الطب - جامعة عين شمس

كلية الطب
جامعة عين شمس
2014

LIST OF CONTENTS

♦ List of Abbreviations	I
♦ List of Figures	IV
♦ List of Tables	VI
♦ Introduction	1
♦ Aim of the Work	4
♦ Review of Literature	
▪ Chapter 1: Leprosy Overview	5
* Introduction	5
* Epidemiology	5
* Causative Organism	6
* Pathophysiology	7
* Classification and Clinical Picture of Leprosy	6
* Leprosy Reaction	19
* Histological Finding	23
* Complication of Leprosy	25
* Differential Diagnosis	25
* Diagnosis	27
* Treatment	31
* Prognosis	35
* Prevention	35

▪ Chapter 2: Immunology of Leprosy	37
* Introduction to Immune System	37
* Immune Response in Leprosy	40
▪ Chapter 3:	
* Interferon – Gamma- IFN- γ	46
* function of Interferon – Gamma- IFN- γ	51
* Interferon Gamma in leprosy IFN- γ	45
▪ Chapter 4: TH17 and its cytokines IL22	
* TH17 cell	55
* Role of human TH17 cell in human pathology	60
* respond to infectious agents	63
* TH17 cellular cytokine IL22.....	64
♦ Subjects and Methods	66
♦ Results	63
♦ Discussion	96
♦ Summary and Conclusion	107
♦ References	111
♦ Arabic Summary	--

LIST OF ABBREVIATIONS

- **aa:** Amino acids.
- **AD:** Atopic dermatitis
- **APCs:** Antigen-presenting cells
- **BB:** Borderline borderline
- **BCG:** Bacillus Calmette-Guerin.
- **BI:** Bacteriological index
- **BL:** Borderline lepromatous
- **BT:** Borderline tuberculoid
- **TYK :** Tyrosine kinase
- **CCR4:** Chemokine receptors 4
- **CLE:** Conserved lymphokine element
- **CMI:** Cell-mediated immunity
- **CSF:** Cerebrospinal fluid.
- **CXCL10:** CXC-chemokine 10.
- **ELISA:** Enzyme-linked immunosorbent assay.
- **EM:** Electron microscopy.
- **ENL:** Erythema nodosum leprosum
- **.HBV:** Hepatitis B virus
- **HCV:** Hepatitis C virus.
- **HIES:** Hyper-IgE syndrome
- **HLA:** Human leucocytic antigens
- **ID:** Indeterminate leprosy
- **IFN- γ :** Interferon gamma
- **Ig:** Immunoglobulin.
- **IL:** Interleukin.
- **iNOS:** Inducible nitric oxide synthetase
- **JAK:** Janus kinase family.
- **LL:** lepromatous leprosy.
- **LLp:** Polar lepromatous leprosy.
- **LLs:** Subpolar lepromatous leprosy.
- **MB:** Multibacillary.
- **MCP-1:** Monocyte chemoattractant protein-1
- **MDT:** Multi drug therapy.

- **MHC:** Major histocompatibility complex
- **MI:** Morphological index.
- ***M. leprae*:** Mycobacterium lepra.
- **MoAb:** Monoclonal antibodies.
- **Foxp3:** Master regulatory transcription factoforkhead fox p3
- **NK:** Natural killer.
- **Non-RL:** Non reactional
- **PAF:** Platelet activating factor
- **PB:** Paucibacillary
- **PCR:** Polymerase chain reaction.
- **PDGF:** Platelet-derived growth factor
- **PG:** Prostaglandin.
- **Pg/ml:** Picogram/milliliter.
- **PGL-1:** Phenolic glycolipid 1.
- **PNL:** Pure neuritic leprosy.
- **qRT-PCR:** quantitative Reverse transcriptase-PCR.
- **RA:** Rheumatoid arthritis.
- **RL:** Reactional leprosy.
- **ROR-c:** Thymus specific nuclear receptor.
- **rRNA:** Ribosomal (r) RNA.
- **SCs:** Schwann cells.
- **SD:** Standard deviation.
- **SPSS:** Statistical program for social science.
- **SSS:** Slit-Skin Smear
- **STAT3:** Signal transducer and activator of transcription 3.
- **T-bet:** lineage-specific transcription factors required for the differentiation of Th1.
- **TCR:** T cell's receptor.
- **TGF-β:** Transforming growth factor- beta.
- **Th cells:** T helper cells
- **TLR2:** Toll-like receptor 2.
- **T Regs:** T regulatory
- **TNF:** Tumor necrosis factor.
- **TT:** Tubercloid leprosy.
- **VCAM:** Vascular cell adhesion molecule Negative.
- **WHO:** World Health Organization.

4	Comparison between IL-22 levels in patients presented for first time versus those with recurrence, using Mann-Whitney test	
5	Comparison between BCG vaccination-negative and -positive patients, as regard IL-22 using Mann-Whitney test.....	
6	Comparison between PB and MB patients. As regards serum IL-22 level (pg/ml), using Mann-Whitney test	
7	Comparison between the different patients' groups using Kruskal-Wallis test, regarding serum IL-22 levels	
8	Comparison between non-reactional and reactional leprosy regarding IL-22 (pg/ml), using Mann-Whitney test	
9	Comparison between the patients' groups using Kruskal-Wallis test regarding	
10	Comparison between cases and controls as regards serum IFN- γ levels (pg/ml), using Mann-Whitney test	
11	Comparison between levels IFN- γ (pg/ml) in patients presented for the first time versus those with recurrence, using Mann-Whitney test.....	
12	Comparison between BCG negative and BCG positive patients, regarding IFN- γ (pg/ml), using Mann-Whitney test.....	
13	Comparison between BCG negative and BCG positive patients, regarding IFN- γ (pg/ml), using Mann-Whitney test.....	

Table no.	Title	Page no.
14	Comparison between the different patients' groups using Kruskal-Wallis test, regarding serum IFN- γ levels.....	
15	Comparison between non-reactional and reactional leprosy regarding IFN- γ (pg/ml), using Mann-Whitney test	
16	Comparison between the different patients' groups using Kruskal-Wallis test, and comparison between the different patients' groups and controls using Mann -Whitney test	
17	Results of Spearman Correlation Test between each of the age of the patients, and the disease duration, and each of serum IL-22 and IFN- γ levels.....	

INTRODUCTION

Leprosy is a chronic infectious disease caused by the obligate intracellular microorganism *Mycobacterium leprae* (*M. leprae*). It is still considered a major health problem in some countries of Asia, Latin America, and Africa, including Egypt. According to the World Health Organization (WHO), approximately 260,000 new patients were affected in 2006 (**WHO, 2008**).

The **Ridley–Jopling** classification of leprosy is based on clinical and histopathological criteria, which suggest a disease spectrum with five clinical categories: tuberculoid (TT), borderline tuberculoid (BT), borderline borderline (BB), borderline lepromatous (BL), and lepromatous (LL) leprosy (**Ridley and Jopling, 1966**). At one pole, TT leprosy is characterized by few well-defined skin patches, few bacilli (paucibacillary; PB), and vigorous cell-mediated immunity (CMI) (**Fitness et al., 2002**). At the other pole, LL presents with many skin lesions with uncontrolled proliferation of leprosy bacilli (multibacillary; MB), and inefficient CMI (**Britton and Lockwood, 2004**). Borderline leprosy manifests clinical and immunological features with characteristics between the two forms (**Sasaki et al., 2001**).

Th subsets play a discriminative role in translating antigen-immunopathology. The identification of novel T cell subsets, such as Th17 cells, is important in order to define the role of the specific immune response in human disease. Across the board of different pathologies, distinct T cell subsets secrete cytokines that not only function on other immune cells, but also instruct target cell (*Burgler S., 2009 and Eyerich, K., 2009*).

Each T cell subset secretes tissue-instructing cytokines such as IFN- γ (Th1), IL-4 (Th2), and IL-17, IL-22 (Th17) (*Weber et al., 2007*).

A less well-defined tissue-instructing cytokine is IL-22, which is expressed by Th17 cells (*Kreymborg, 2007*) but also by NK cells (*Cupedo, 2009*). There are many studies have determined that some T cells express IL-22 independently of IL-17, particularly CCR10+ T cells (*Eyerich K , 2009 ; Nograles K.E , 2009 and Trifari et al , 2009*).

The function of IL-22 is difficult to generalize: It is not antiinflammatory, nor is it necessarily proinflammatory. In the skin, IL-22 induces antimicrobial peptides, promotes keratinocyte proliferation, and inhibits differentiation, which suggests a role in remodeling wound healing and in innate defense mechanisms (*Boniface , 2005*).

The immune response against intracellular pathogens (including *M. leprae*) is mainly regulated by interferon- γ (IFN- γ). This cytokine activates macrophages through the production of reactive oxygen intermediates (ROIs), nitric oxide (NO), and enhanced expression of class I and II MHC molecules and costimulatory molecules involved in antigen presentation. IFN- γ also modulates the expression of other antigen processing mechanisms, which promote optimum activation of CD4 and CD8 T cells (**Huang *et al.*, 2002**).
