Prof. of Applied Chemistry
Egyptian Petroleum Research Institute

2014

ACKNOWLEDGEMENT

All praise is to Allah, the Beneficent, the Merciful, without whose mercy and guidance this work would never have been started nor completed. I praise Him as much as the heavens and earth and what are in between or behind.

*I would like to express my great gratitude and appreciation to the supervisor of this work, **Professor Dr. Nadia Gharib Kandile**, Professor of Organic chemistry, Faculty of Women – Ain Shams University, for her great effort in suggesting, planning and sponsoring this research, and her kind care during the progress of this work.*

*From my deep heart, many thanks are paid to **Professor Dr Nabel Abdel Moneem Negm**, Prof. of Applied Organic Chemistry, Petrochemicals Department, Egyptian Petroleum Research Institute (EPRI) For his interest, support, constructive criticism and fruitful discussion throughout this work*

The author wishes also to express his great and warm gratitude to: All the scientific members in Petrochemicals Department, Egyptian Petroleum Research Institute For their guidance, and supporting

*Finally, special thanks to **my Family**, for their continuous support, and encouragement.*

CONTENTS

Title	Page No.
LIST OF TABLES	I
LIST OF FIGURES	iii
INTRODUCTION	1-76
<u>Material and experiments:</u> -chemicals -synthesis cationic surfactant(O,D,H) synthesis nonionic surfactants	77-79
<u>Measurements:</u> -surface tension &interfacial tension -emulsification -biodegradation -weight loss - Polarization	79-82
Result and discussion	83
<u>-synthesis:</u> -synthesis of cationic surfactant schiff base derivatives of -vanillin(SBO,SBD,SBH)	83-85
-synthesis of nonionic surfactants	86-87
<u>Cationic surfactants :</u> -surface activity -emulsification -biodegradability assessment -corrosion inhibition evaluation -weight loss corrosion rate &inhibition efficiency	88-90 91-93

Contents

Title	Page No.
-corrosion inhibition mechanism -adsorption isotherm -polarization measurements -surface activity-corrosion inhibition	93-101
<u>Nonionic surfactant :</u> -Surface activity -thermodynamics of adsorption & micellization	102-104
-corrosion inhibition evaluation -weight loss measurements - adsorption isotherm -potentiodynamic polarization measurements -electrochemical impedance spectroscopy -mechanism of corrosion inhibition	105-118

LIST OF TABLES

Table No.	Title	Page No.
(1)	PROPERTIES OF THE CATIONIC SURFACTANTS	149
(2)	PROPERTIES OF THE NONIONIC SURFACTANTS	150
(3)	SURFACE AND THERMODYNAMIC PROPERTIES OF THE CATIONIC SURFACTANT AT 25 °C	151
(4)	FITTING PARAMETERS OF THE ADSORPTION ISOTHERM OF THE SYNTHESIZED INHIBITORS AT 25 °C	152
(5)	ELECTROCHEMICAL PARAMETERS CALCULATED FROM POLARIZATION MEASUREMENTS ON THE CARBON STEEL IN 1N HCL SOLUTION IN THE ABSENCE AND PRESENCE OF THE DIFFERENT DOSES OF THE SYNTHESIZED INHIBITORS (PPM BY WEIGHT) AT 25 °C	153
(6)	SURFACE PARAMETERS OF THE SYNTHESIZED SCHIFF BASE NONIONIC SURFACTANTS	154
(7)	GRAVIMETRIC AND KINETIC PARAMETERS OBTAINED FOR CORROSION REACTION OF CARBON STEEL IN 1 N HCL AT 25 oC IN ABSENCE AND IN PRESENCE OF DIFFERENT CONCENTRATIONS OF THE TESTED INHIBITORS AT DIFFERENT TIME INTERVALS	155-157

List of Tables

Table No.	Title	Page No.
(8)	ELECTROCHEMICAL PARAMETERS OF CARBON STEEL IN 1 N HCL SOLUTION IN THE ABSENCE AND PRESENCE OF THE DIFFERENT DOSES OF THE SYNTHESIZED NON IONIC INHIBITORS (PPM BY WEIGHT) AT 25	158-159
(9)	IMPEDANCE PARAMETERS OBTAINED FOR THE CARBON STEEL IN 1 N HCL SOLUTION IN THE ABSENCE AND IN THE PRESENCE OF DIFFERENT CONCENTRATIONS OF PDS, PHS, POS AND PLS INHIBITORS AT 25 °C	160-161

LIST OF FIGURES

Figure No.	Title	Page No.
(1)	<i>IR spectra of SBO surfactant.</i>	119
(2)	<i>IR spectra of SBD surfactant</i>	120
(3)	<i>IR Spectra of SBH surfactant.</i>	121
(4)	<i>NMR Spectra of SBD surfactant</i>	122
(5)	<i>IR spectra of PDS surfactant.</i>	123
(6)	<i>NMR Spectra of PDS surfactant</i>	124
(7)	<i>NMR Spectra of PL surfactant</i>	125
(8)	<i>Surface tension vs. log C profile of the synthesized vanillin derived cationic surfactants at 25°C.</i>	126
(9)	<i>Relation between CMC values and the carbon chain length of the vanillin derived cationic surfactants.</i>	127
(10)	<i>Effect of hydrophobic chain length on the emulsification power of the vanillin derived cationic surfactants.</i>	128
(11)	<i>Biodegradation of the synthesized cationic surfactants.</i>	129
(12a-c)	<i>Relation between weight loss and immersion time of the carbon steel coupons in 1N HCl solution at 25°C, a. SBO inhibitor, b. SBD inhibitor, c. SBH inhibitor.</i>	130
(13a-c)	<i>Relation between corrosion rate (Cr) and immersion time of the carbon steel coupons in 1N HCl solution at 25°C, a. SBO inhibitor, b. SBD inhibitor, c. SBH inhibitor</i>	131

List of Figures

Figure No.	Title	Page No.
(14)	<i>Relation between corrosion inhibition efficiency (η %) of the tested inhibitors and inhibitor dose (ppm) on the carbon steel coupons corrosion in 1N HCl solution at 25°C.</i>	132
(15)	<i>Effect of chain length on the corrosion inhibition efficiency of the tested inhibitors on the corrosion of carbon steel coupons in 1N HCl solution at 25°C.</i>	133
(16)	<i>Effect of chain length on the corrosion inhibition efficiency of the tested inhibitors on the corrosion of carbon steel coupons in 1N HCl solution at 25°C.</i>	134
(17)	<i>Langmuir adsorption isotherm of the tested inhibitors at 25°C in 1 M HCl</i>	135
(18a-d)	<i>Potentiodynamic curves for the carbon steel electrode in 1N HCl solution at 25°C with and without different concentrations of the tested inhibitors: a. pure vanillin, b. SBO inhibitor, c. SBD inhibitor, d. SBH inhibitor</i>	136
(19)	<i>Surface tension vs. $-\log C$ of the nonionic surfactants at 25°C, POS; \square: PLS.</i>	137
(20)	<i>Effect of alkyl chain length on the corrosion rate of carbon steel in 1 N HCl in presence of different concentration of the nonionic inhibitors (ppm by weight) at 25°C</i>	138
(21)	<i>Langmuir isotherm adsorption model of nonionic inhibitors on the surface of carbon steel in 1 N HCl solution.</i>	139
(22)a	<i>Polarization curve of carbon steel corrosion in 1 N HCl in presence of different concentrations (ppm by weight) of POS inhibitor at 25°C.</i>	140

List of Figures

Figure No.	Title	Page No.
(22)b	<i>Polarization curve of carbon steel corrosion in 1 N HCl in presence of different concentrations of PDS inhibitor at 25°C.</i>	141
(22)c	<i>Polarization curve of carbon steel corrosion in 1 N HCl in presence of different concentrations of PHS inhibitor at 25°C.</i>	142
(22)d	<i>Polarization curve of carbon steel corrosion in 1 N HCl in presence of different concentrations of PLS inhibitor at 25°C.</i>	143
(23)a	<i>Nyquist plots of the corrosion of carbon steel in 1 N HCl containing different concentrations (by weight) of POS inhibitor at 25°C.</i>	144
(23)b	<i>Nyquist plots of the corrosion of carbon steel in 1 N HCl containing different concentrations (by weight) of PDS inhibitor at 25°C.</i>	145
(23)c	<i>Nyquist plots of the corrosion of carbon steel in 1 N HCl containing different concentrations (by weight) of PHS inhibitor at 25°C.</i>	146
(23)d	<i>Nyquist plots of the corrosion of carbon steel in 1 N HCl containing different concentrations (by weight) of PLS inhibitor at 25°C.</i>	147
(24)	<i>Equivalent circuit used to fit the metal/acid interface containing different concentrations of the tested inhibitors.</i>	148
(25)	<i>Schematic illustration of inhibitor adsorption on carbon steel/acid interface.</i>	148
