

Faculty of Science
Microbiology Department

***Antibacterial and antiviral activity of cyanobacteria
and microalgae isolated from River Nile***

A Thesis

**Submitted for the degree of Master of Science as a partial
fulfillment for requirements of the Master of Science**

By

Rehab Hamdy Mahmoud Elsayed

Researcher assistant NRC

B.Sc. Microbiology/Chemistry (2010)

Supervisors

Prof. Dr.

Mohamed Khaled Ibrahim

Professor of Bacteriology

Chairman of

Microbiology Department

Faculty of Science

Ain Shams University

Prof. Dr.

Gamila Hussin Ali

Professor of Hydrobiology

Water pollution research

Department, Environmental

pollution division

National Research Center

Prof. Dr. Mona Hafez Hetta

Professor of Pharmacognosy

Chairman of Pharmacognosy Department

Faculty of Pharmacy

Beni-Suef University

(2014)

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

رَبِّ أَوْزَعْنِي أَنْ أَشْكُرَ
نِعْمَتَكَ الَّتِي أَنْعَمْتَ عَلَيَّ وَعَلَى
وَالِدَيَّ وَأَنْ أَعْمَلَ صَالِحًا تَرْضَاهُ
وَأَدْخِلْنِي بِرَحْمَتِكَ فِي عِبَادِكَ
الصَّالِحِينَ

النمل : 19

صدق الله العظيم

Declaration

This thesis has not previously been submitted for any other university. The references were being checked whenever possible; show the extant to which I have availed myself of the work of other authors.

Rehab Hamdy Mahmoud El-Sayed

Acknowledgement

*Firstly and forever, Thanks to **ALLAH**, who give me everything in my life, and I supplicate to **Allah** to make my life in a perfect way.*

*I wish to express my appreciation to **Prof. Dr. Mohamed Khaled Ibrahim**, Professor of Bacteriology & Chairman of Microbiology Department, Faculty of Science, Ain Shams University, for his much valued guidance, detailed review, constructive criticism and excellent advice during the preparation of this thesis.*

*Words won't be enough and will stand short when coming to express my great appreciation for **Prof. Dr. Gamila Hussin Ali**, Professor of Hydrobiology, Water pollution Department, Environmental research, National Research Center, for suggesting the theme of my thesis, for her valued guidance, encouragement and for her supervision from the initial to the final level which enabled me to develop and understanding of the subject.*

*I would like to express my sense of gratitude to **Prof. Dr. Mona Hafez Hetta**, Professor of pharmacognosy, Faculty of pharmacy, Beni-Suef University for her guidance, and parental care she provided throughout my research work.*

*Special thanks are expressed to **Prof. Dr. Gamila El-Taweel**, Professor of Bacteriology, Water pollution Department, Environmental research, National Research Center, for her generous help in supervising the experimental work and preparation of the manuscript.*

*I would like also to thank **Prof. Dr. Waled Morsy El-Senousy** Professor of virology, Water pollution Department, Environmental research, National Research Center, for his assistance in antiviral experiments.*

*I would like also to thank **Prof. Dr. Mohamed M. Abou Zaid** Professor of Aquatic Biology, Botany and Microbiology Department, Faculty of Science, Al-Azhar University for his cooperation and designing the photobioreactor which was helpful apparatus for the cultivation of the promising isolates and enable this work to be accomplished.*

Moreover, I would like to acknowledge gratefully all the members of Water pollution Department, Environmental research, National Research Center, for their cooperation.

*Finally, I would like to express my deep thanks to **my family** especially **my mother** for their love, support, patience, and encouragement throughout my undergraduate and postgraduate career.*

Rehab Hamdy Mahmoud Elsayed

Contents

Abstract.....	1
Introduction.....	3
Aim of work.....	8
Review of literature (part I).....	9
1. Nature and biodiversity of cyanobacteria and microalgae.....	9
2. Ecological roles of cyanobacteria and microalgae.....	12
3. Cyanobacteria and microalgae changing science fields.....	14
3.1. Red biotechnology: application to medicine and pharmaceuticals.....	14
3.2. Green biotechnology: application to food and environment.....	29
3.2.1. Application to food.....	29
3.2.2. Application to environment.....	34
3.2.3. White biotechnology: application to energy.....	37
Material and Methods.....	41
1. Collection and maintenance of cyanobacteria and microalgae species.....	41
2. Isolation, purification and identification of species.....	41
3. Chlorophyll "a" determination.....	43

4.	Determination of biochemical constituents.....	44
4.1.	Total carbohydrate contents.....	44
4.2.	Different sugars content.....	45
4.2.1.	Extraction of polysaccharide.....	45
4.2.2.	Test for the identity of the isolated polysaccharide units.....	45
4.3.	Determination of total protein content.....	47
4.4.	Determination of amino acids using amino acid analyze.....	48
4.5.	Determination of lipid conten.....	49
4.5.1.	Preparation of the unsaponifiable matter.....	50
4.5.2.	Fractionation of unsaponifiable matter.....	50
4.5.3.	Preparation of fatty acids.....	51
4.5.4.	Identification of fatty acids components by Gas Liquid Chromatography (GLC)	52
4.6.	Determination of total phenolics contents.....	53
4.7.	Determination of total tannin contents.....	54
4.8.	Determination of total flavonoid contents.....	55
5.	Preparation of cyanobacterial extracts for antibacterial and antiviral assessment	56
5.1.	Preparation of crude methanol extract for the different isolates.....	56

5.2.	Fractionation of crude methanol extract with different solvents.....	57
6.	Antimicrobial activities of cyanobacteria/microalgae extract.....	57
6.1.	Antimicrobial activity of isolates extracts: Disc diffusion method.....	59
6.2.	Determination of percentage of inhibition (pour plate method)	60
7.	Cytotoxicity and antiviral activity of cyanobacteria /microalgae extracts.....	61
7.1.	Cytotoxicity assay to estimate the non toxic dose of cyanobacteria and algae extracts on Huh 7.5, MA 104, Hep-2 and BGM cell line.....	62
7.1.1.	Cell morphology evaluation by inverted light microscopy.....	63
7.1.2.	Cell viability test by Trypan blue dye exclusion method.....	64
7.2.	Determination of rotavirus Wa strain, adenovirus type7, adenovirus type 40, and coxsackievirus B4Titers using plaque assay.....	64
7.3.	Nested-PCR for detection of the tested viruses.....	65

7.4.	Antiviral effect of different extracts/fractions on rotavirus Wa strain, adenovirus type 7, adenovirus type 40 and coxsackievirus B4.....	66
7.5.	Cell Culture-Real time RT-PCR (CC-Real time-RT-PCR) test to quantify the number of infectious particles of HCV before and after treatment of algal materials.....	68
7.6.	Data analysis.....	69
	Results.....	70
1.	Isolation of cyanobacteria and microalgae monoculture species.....	70
2.	Morphological identification of isolates.....	71
3.	Chlorophyll "a" Content.....	76
4.	Biochemical constituent.....	83
4.1.	Carbohydrate content.....	83
4.2.	Different sugars content.....	84
4.3.	Protein content.....	86
4.4.	Amino acids profile in different cyanobacteria and microalgae species.....	88
4.5.	Total lipid content.....	90
4.6.	Fatty acids profile in different cyanobacteria and microalgae species.....	92

4.6.1. Saponifiable fatty acids.....	92
4.6.2. Total unsaponifiable matter.....	94
4.7. Total phenolics content.....	95
4.8. Total tannins content.....	96
4.9. Total flavonoids content.....	98
5. Antimicrobial activity of cyanobacteria/microalgae extracts.....	100
5.1. Disc diffusion qualitative method.....	101
5.1.1. Antimicrobial activity of the crude methanol extracts of the isolates.....	101
5.1.2. Antimicrobial activity of <i>n</i> -hexane fraction of different isolates.....	104
5.1.3. Antimicrobial activity of dichloromethane fraction of different isolates.....	107
5.1.4. Antimicrobial activity of ethyl acetate fraction of different isolates.....	109
5.1.5. Antimicrobial activity of <i>n</i> -butanol fraction of different isolates.....	111
5.1.6. Antimicrobial activity of water fraction of different isolates.....	113

5.1.7. Antimicrobial activity of crude water extract of different isolates.....	113
5.2. Pour plate quantitative method.....	117
5.2.1. Antibacterial activity (percentage of inhibition) of cyanobacteria /microalgae against gram negative bacteria.....	117
5.2.2. Antibacterial activity (percentage of inhibition) of cyanobacteria /microalgae against gram positive bacteria.....	127
5.2.3. Antifungal activity (percentage of inhibition) of cyanobacteria /microalgae against <i>Candida albicans</i> ATCC 10231.....	130
6. Cytotoxicity and antiviral activities of the isolated cyanobacteria /microalgae extracts.....	132
6.1. Non toxic dose of cyanobacteria and algae extracts.....	132
6.2. Antiviral activities of isolated cyanobacteria/microalgae extracts against rotavirus Wa, adenovirus type 7, adenovirus type 40 and Coxsackievirus B4 viruses.....	132
6.3. Antiviral activities of isolated cyanobacteria/microalgae extracts against HCV genotype 4.....	135
Discussion.....	137
Cultivation techniques (part II)	163

1.	History of cyanobacteria and microalgae cultures and different cultivation techniques.....	163
1.1.	Open ponds.....	165
1.2.	Photobioreactors.....	166
2.	Harvesting cyanobacteria and microalgae.....	172
3.	Batch cultivation technique.....	173
4.	Continuous cultivation technique.....	177
4.1.	Purpose of the photobioreactor.....	178
4.2.	Principals of the photobioreactor.....	179
4.3.	Design Criteria.....	179
4.4.	Specifications.....	180
5.	Growth conditions of <i>Spirulina platensis</i> in the photobioreactor.....	188
	Conclusion.....	198
	Recommondations.....	202
	References.....	203
	English Summary.....	286
	Arabic Summary.....	

Dedication

I am deeply and forever indebted to:

My dear mother

My late father

My sisters & brother

List of figures

Figure no.	Title	Page
1	<i>Spirulina platensis</i> processing forms.....	34
2	Standard curve of gallic acid.....	54
3	Standard curve of rutin.....	56
4	Morphological characteristics of isolated cyanobacteria.....	72
5	Morphological characteristics of isolated green microalgae.....	76
6	Growth characteristics of isolated cyanobacteria species.....	78
7	Growth characteristics of isolated microalgae species.....	81
8	Maximum standing biomass (Chlorophyll "a") of candidate cyanobacteria/microalgae.	82
9	Total carbohydrate content of all candidate cyanobacteria/ microalgal species.....	84
10	Total protein content of all candidate cyanobacteria/ microalgal species.....	87
11	Total lipid content of all candidate cyanobacteria/ microalgal species.....	91
12	Total phenolics content of all candidate cyanobacteria/ microalgal species.....	96
13	Total tannins content of all candidate cyanobacteria/ microalgal species.....	98
14	Total flavonoids content of all candidate cyanobacteria/ microalgal species.....	100
