Statement

This thesis is submitted as a partial fulfilment of Master of Science in Electrical Engineering Engineering, Faculty of Engineering, Ain shams University.

The author carried out the work included in this thesis, and no part of it has been submitted for a degree or a qualification at any other scientific entity.

Shaimaa Abdelaziz Mahmoud Osman

Researcher Data

Name : Shaimaa Abdelaziz Mahmoud Osman

Date of birth : September 1st 1984

Place of birth : Cairo, Egypt

Last academic degree : Bachelor of Science

Field of specialization : Electronics Engineering and Electrical Communications

University issued the degree : Helwan

Date of issued degree : 2006

Current job : Laboratory Engineer at Egyptian Russian University (ERU)

Abstract

Ultra-wideband (UWB) applications have captured attention as a high-speed secured wireless communications with extremely low power consumption. There are many challenges when dealing with these new applications. One of them is how to design a power divider (PD) that can perform effectively in the entire UWB frequency range from 3.1 GHz to 10.6 GHz. This thesis mainly focused on designing power dividers for UWB systems. The performance criteria of power divider such as insertion loss, output ports isolations and return loss are discussed as well as PD different design methodologies and technologies. Different techniques to enhance the performance of power divider are investigated and tested, such as bandwidth broadening, isolation enhancement and matching improvement.

A novel N-way power divider design for UWB systems is developed. The design is realized using two cascaded sections of Wilkinson PD of equal characteristic impedances and unequal electrical lengths with inserted open stub on each section to enhance the isolation, matching and to broaden the bandwidth. The analytical solution for the designed N-way power dividers is based on two approaches namely “Even-Odd Mode Method” and the “ABCD Matrix” Method. Simple design equations and guidelines are proposed to facilitate the design procedure and limit the usage of CAD simulators and optimizers. To verify the proposed design methodology, 2-way, 3-way and 4-way PD for UWB are designed, simulated and implemented.

The 2-way power divider for UWB systems is tested using EM-Circuit Co-Simulation then fabricated, measured and compared with similar published PD. It has an isolation of better than 13.5 dB within the entire UWB frequency band and has a compact area of $22 * 15 \text{ mm}^2$. Measurement and simulation results agrees well, which verifies the proposed design equations as well as the design procedure. In addition, the proposed circuit is compared to conventional published ones to show the enhancement percentage in different performance parameters, where the 2-way proposed circuit achieves 23% isolation enhancement and better than 45 % of return loss enhancement. The 3-way and 4-way power dividers design equations are introduced along with the suggested planar microstrip implementation. Another 4-way power divider is proposed using three 2-way PD. This method is more realistic in planar microstrip fabrication. This proposed 4-way PD is fabricated, measured and compared to published available ones. It has an isolation of better than 12.5 dB and a return loss of better than 10 dB through the whole UWB range. Furthermore, the exceeded insertion loss is less than 1.8 dB and the occupied area is $40*34 \text{ mm}^2$. Finally, the proposed structures as well as the developed design procedure are very useful for UWB applications.

Acknowledgments

Thanks to Allah, to the successful completion of this work.

I would like to express my sincere gratitude to Professor Fawzy Ibrahim for his guidance and encouragement. His experience and his invaluable advices helped me through different phases of this work. My appreciations for Professor Fawzy Ibrahim for giving the chance to be one of his students.

I am also so grateful for Associate Professor Ayman M. El-Tager for his extraordinary knowledge, precious discussions and enlighten guidance. Moreover, for giving the chance to be one of his students.

A special acknowledgment for Professor Ismail M. Hafez for his supervision and his academic support throughout my study at Ain Shams University.

I would like to thank the National Telecommunication Institute (NTI) and their staff. My special thanks go to Engineer Amaal and Engineer Nagdy for their help in the fabrications and measurements.

I am also grateful to the Egyptian Russian University (ERU) and its staff for their encouragements.

Last but not least, an endless gratitude to my lovely family, my dear parents and my friends Amina El-Banna and Heba Ahdy for their continuous support during this study.

List of Symbols

[S]	Scattering Matrix
μ	Permeability
B	Bandwidth
B_1, B_2	Stub Susceptances
C	Channel Capacity
C	Capacitance
C_L	Left handed Capacitance
C_R	Right handed Capacitance
dB	Decibel
ϵ_r	Dielectric Constant
f	Frequency
f_c	Center Frequency
F_L	Lower Edge Frequency
F_U	Upper Edge Frequency
GHz	Giga-Hertz, 10^9 Hz
h	Substrate Thickness
IL	Insertion Loss
L	Inductance
l	Physical Length of Transmission Line
L_L	Left handed Inductance
L_R	Right handed Inductance
MHz	Mega-Hertz, 10^6 Hz
N	Number of output ways
n	Refractive Index
NF	Noise Floor
P _i	Incident Power
P _n	Input or Output Port number n where $n \in \{1,2,3,\dots,N+1\}$
P _t	Transmitted Power
R	Resistance
S_{11}	Input Return Loss (Reflection Coefficient)
$S_{21} = S_{31} = S_{41}$	Insertion Loss (Transmission Coefficient)
$S_{22} = S_{33} = S_{42} \dots$	Output Return Loss
$S_{23} = S_{32} = S_{42} \dots$	Output Ports Isolation

S_{nn}^e	The Even-mode S-Parameter at port n (Pn) where $n \in \{1,2,3,\dots,N+1\}$
S_{nn}^o	The Odd-mode S-Parameter At Pn where $n \in \{1,2,3,\dots,N+1\}$
SNR	Signal to Noise Ratio
t	Conductor Thickness
$\tan\delta$	Loss Tangent
V	Voltage
VSWR	Voltage Standing Wave Ratio
Y	Admittance of Transmission line
$Y_{n,in}^e$	The Even-mode input admittance at port n, where $n \in \{1,2,3,\dots,N+1\}$
$Y_{n,in}^o$	The Odd-mode input admittance at port n, where $n \in \{1,2,3,\dots,N+1\}$
$Y_{n,l}^e$	The Even-mode load admittance at port n, where $n \in \{1,2,3,\dots,N+1\}$
$Y_{n,l}^o$	The Odd-mode load admittance at port n, where $n \in \{1,2,3,\dots,N+1\}$
Z_{l_oc}	Open-Circuited Stub characteristics impedance
Z_{l_sc}	Short-Circuited Stub characteristics impedance
Z_o	Characteristic Impedance of External Load
Z_{s1}, Z_{s2}	Characteristic Impedance of stub
β	Phase Constant
θ	Electrical length of Transmission Line
λ	Wavelength
ϕ	Equivalent Total Electrical length of Transmission Lines
Ω	Ohm
ω_{se}	Series Resonance
ω_{sh}	Shunt Resonance
