Coronary reserve in hypertensive patients and its correlates

Thesis
Submitted for Partial Fulfillment of
The M.D Degree in Cardiology

By
Bassem Wadie Habib
M.B; B.Ch. M.S.
Faculty of Medicine-Ain Shams University

Under Supervision of

Prof. Ali Ahmed Ibrahim ElAbd

*Professor of Cardiology
Faculty of Medicine, Ain Shams University*

Prof. Samir Saleh Ahmed Wafa

*Professor of Cardiology
Faculty of Medicine, Ain Shams University*

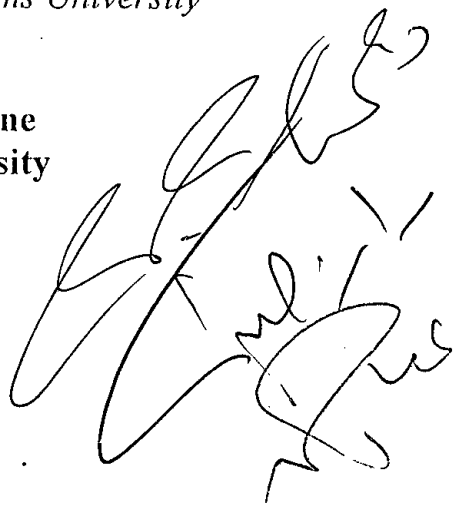

Dr. Mohamed Ayman Mostafa Saleh

*Assistant Professor of Cardiology
Faculty of Medicine, Ain Shams University*

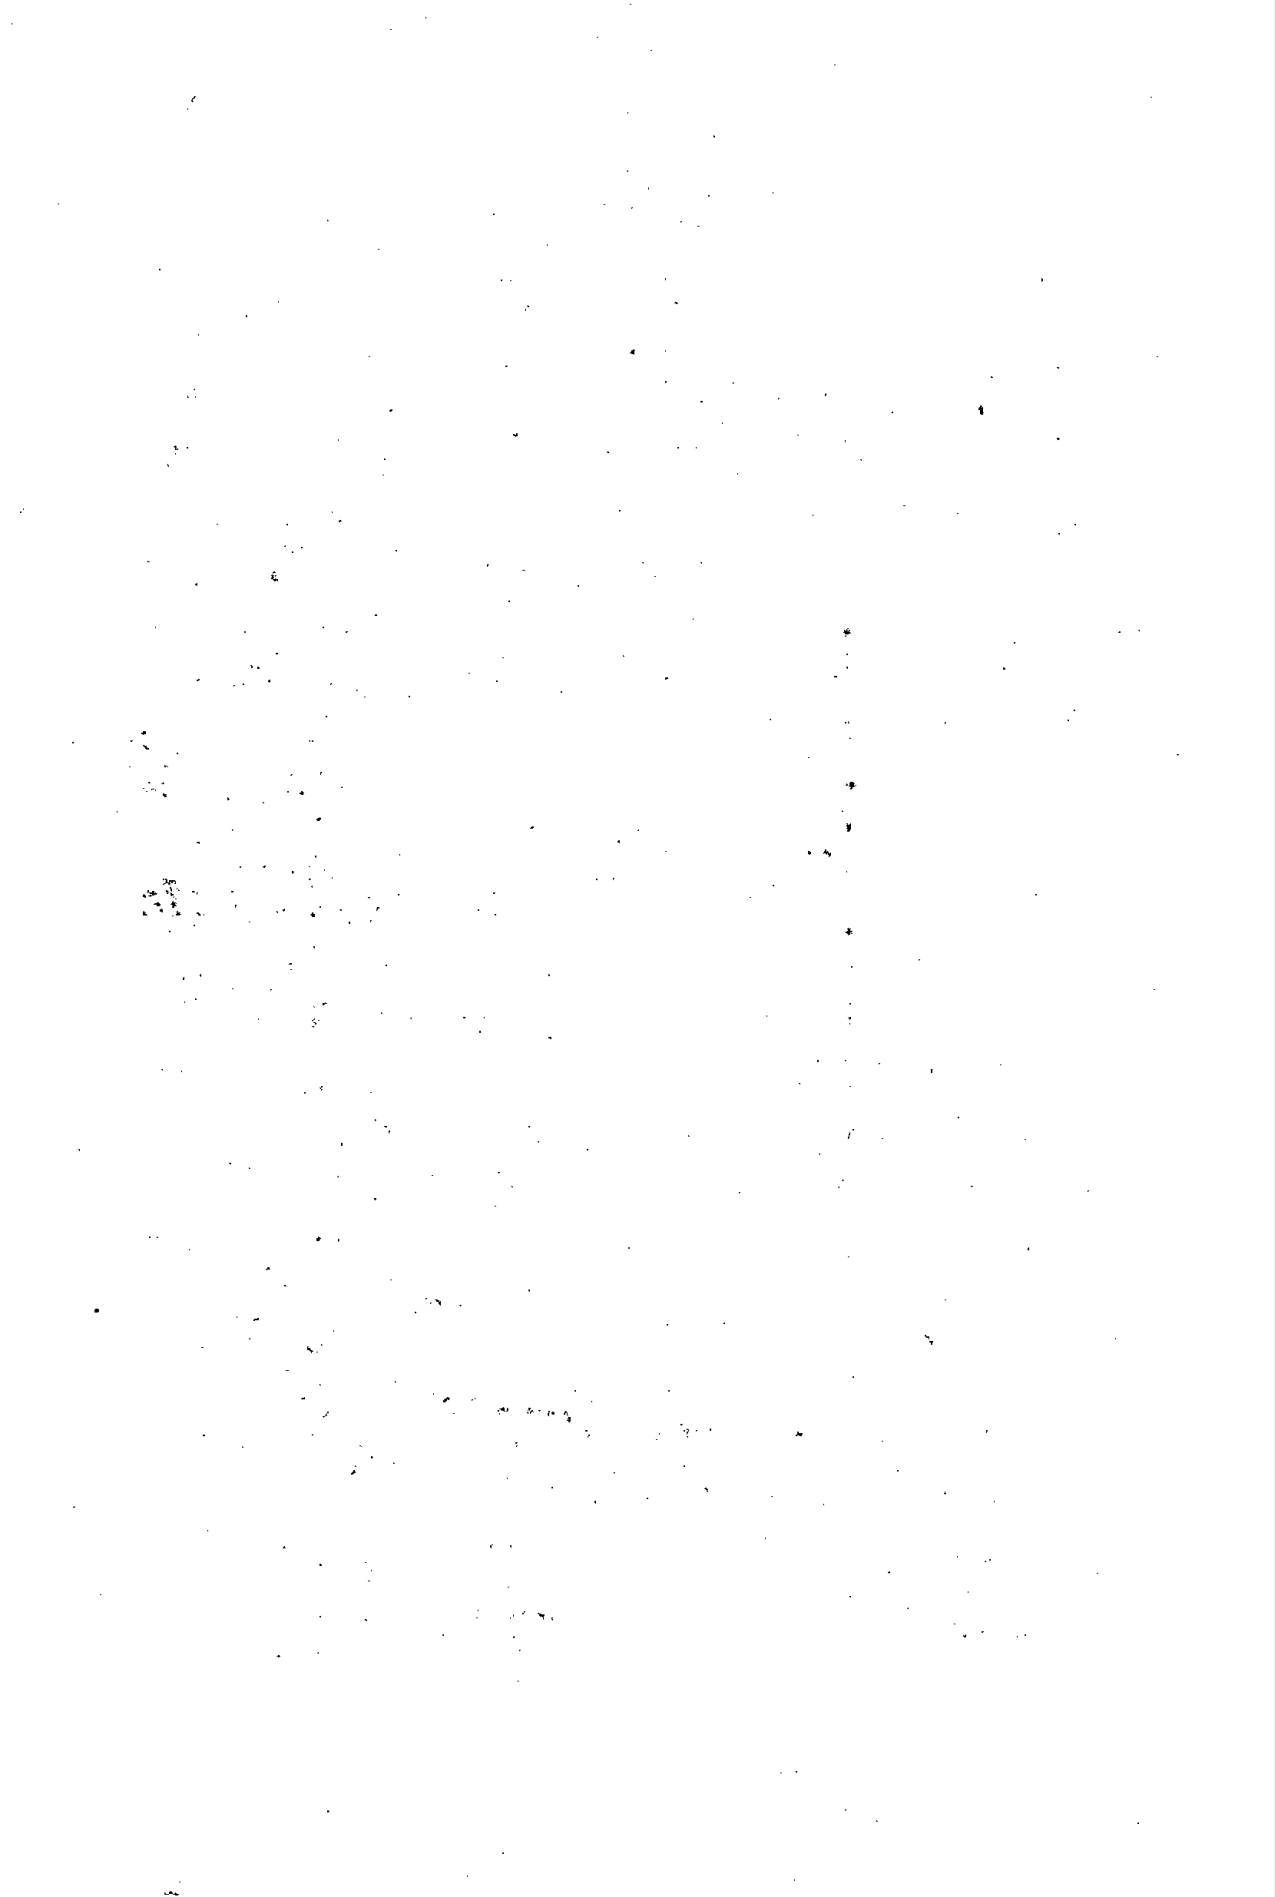

Dr. Azza Abdalla Ibrahim El Fiky

*Lecturer of Cardiology
Faculty of Medicine, Ain Shams University*

Faculty of Medicine
Ain Shams University
2001

B
0121

Acknowledgement

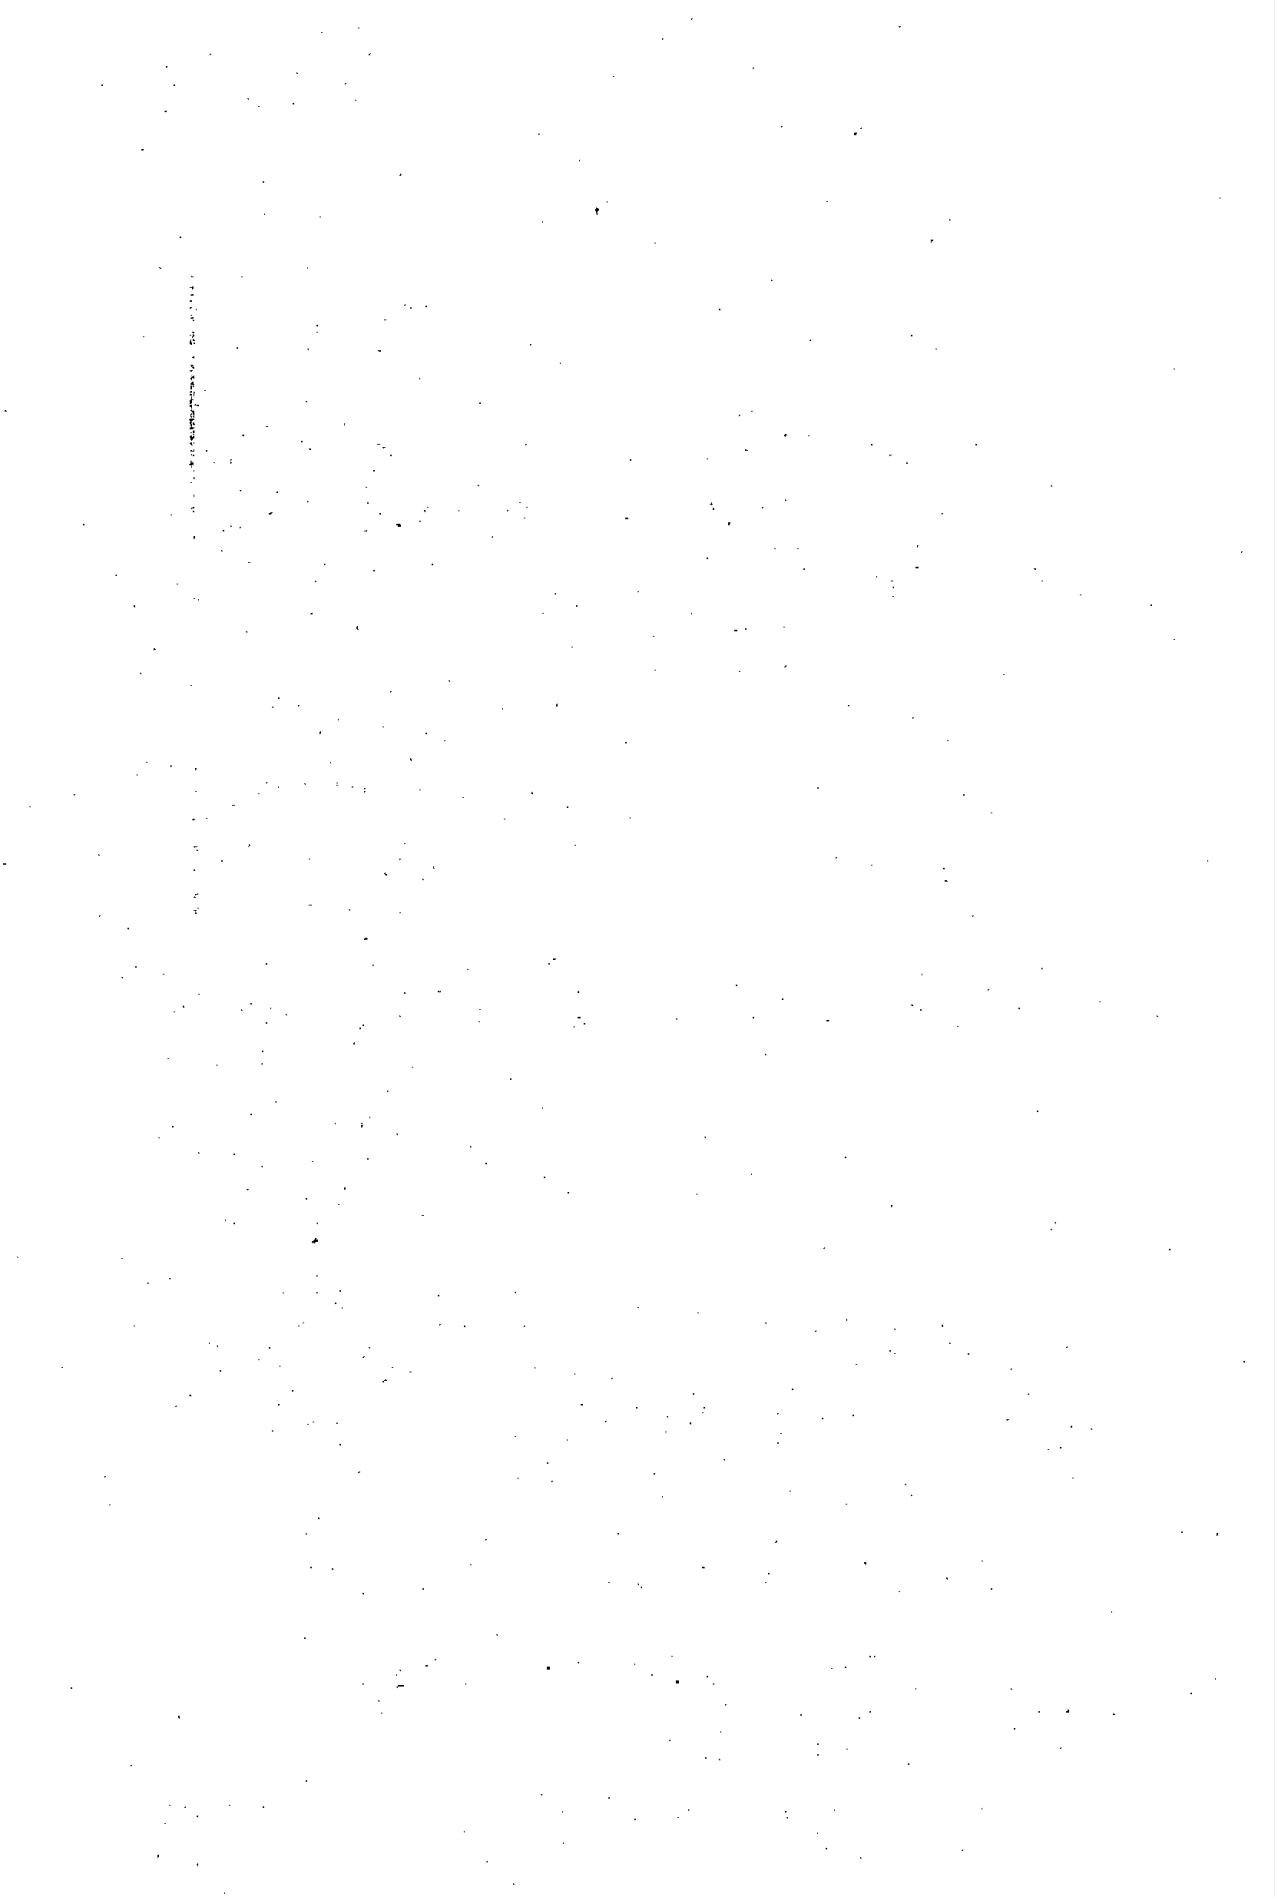

First, I should thank "God" who helped me all through to achieve this work.

*I wish to express my deepest gratitude to **Professor Ali Ahmed**, Professor of Cardiology, Faculty of Medicine, Ain Shams University, for his worthy time he spent in revising this work and for his encouragement, support and kindness, which enabled me to go ahead and complete this work.*

*I am also indebted to **Professor Samir Wafa** Professor of Cardiology, Faculty of Medicine, Ain Shams University, for his kind, continuous assistance and his precious remarks.*

*I am sincerely grateful to **Dr Ayman Saleh** Assistant Professor of Cardiology, Faculty of Medicine, Ain Shams University, he has been of great help in accomplishing the practical part of the research and revising the whole thesis.*

*I am also grateful to **Dr. Azza El-Fiky**, Lecturer of cardiology, Faculty of Medicine, Ain Shams University, for her worthy time in performing the practical part of the work and for her keen supervision, continuous guidance, and precious advice all through the work.*

List of Contents

	Page
* Introduction	1
* Aim of the work	4
* Review of literature	5
▪ Coronary reserve: Concept and physiological variations	5
▪ Methods of evaluation & of interpretation of coronary flow reserve	17
▪ Structural and functional alterations of the intramyocardial coronary arterioles in patients with arterial hypertension.	62
▪ Coronary reserve in patients with diabetes mellitus	79
▪ Effects of nicotine smoking on coronary vascular reserve	82
▪ Role of endothelial function in coronary vasomotion	86
* Patients and Methods	103
* Results	116
* Discussion	149
* Summary and Conclusion	163
* Recommendations	165
* References	166
* Arabic Summary	

List of Tables

<i>Table</i>	<i>Page</i>
Table (1): Showing successive stages of Treadmill protocol according to ACC/AHA task force recommendations for exercise test	105
Table (2): Personal and anthropometric characteristics of the control and hypertensive groups	117
Table (3): Comparison between group (1) (Control) and group (2) (HTN) as regard LVH, sex and smoking.	118
Table (4): Comparison between group (1) (control) and group (2) (Hypertensive) regarding heart rate before and after dipyridamole and treadmill test.	119
Table (5): Comparison between group (1) (control) and group (2) (HTN) as regard echocardiography parameters	121
Table (6): Comparison between group (1) (control) and group (2) (HTN) as regard coronary reserve parameters before dipyridamole	123
Table (7): Comparison between group (1) (Control) and group (2) (HTN) as regard coronary reserve parameters after dipyridamole	127
Table (8): Comparison between group (1) and group (2) as regard coronary flow reserve	131

List of Figures

Figure	Page
Fig (1): Perfusion pressure versus flow before (autoregulation) and after maximal vasodilatation (hyperaemia) of the coronary circulation	6
Fig (2): Effect of a change in oxygen consumption on the basal coronary reserve (R_1) an increase in oxygen consumption decreases coronary reserve (R_2) and vice visa	10
Fig (3): The anatomy of adult esophagus.	44
Fig (4): Left coronary arteries; horizontal basal short-axis view. The left main artery (LM) and its bifurcation to the left anterior descending (LAD) and circumflex (LCx) coronary arteries are well visualized.	51
Fig (5): M-mode echo cardiogram demonstrating the left ventricular measurements as recommended by the American Society of echocardiography.	107
Fig (6): Showing normal pulsed Doppler flow pattern in a normal proximal LAD. Notice the bigger diastolic wave form than the systolic one	110
Fig (7): Showing measurement of peak systolic velocity, peak diastolic velocity, systolic velocity integral, diastolic velocity integral and total velocity integral	111
Fig (8): Shows the case sheet used in collecting data of patients enrolled in the study	114

Fig (9): Comparison between group 1 and group 2 as regard diastolic integral, systolic integral and total integral before dipyridamole	124
Fig (10): Comparison between group 1 and group 2 as regard peak diastolic velocity and peak systolic velocity before dipyridamole	124
Fig (11): Comparison between group 1 and group 2 as regard total coronary flow, systolic coronary flow and diastolic coronary flow before dipyridamole.	125
Fig (12): Comparison between group 1 and group 2 as regard diastolic integral, systolic integral and total integral after dipyridamole.	128
Fig (13): Comparison between group 1 and group 2 as regard peak diastolic velocity and peak systolic velocity after dipyridamole.	128
Fig (14): Comparison between group 1 and group 2 as regard total coronary flow, systolic coronary flow and diastolic coronary flow after dipyridamole.	129
Fig (15): Comparison between group 1 and group 2 as regard coronary reserve.	131
Fig (16): Comparison between group 2A and group 2B as regard effect of LV mass index on coronary reserve parameters.	134
Fig (17): Correlation between LV mass index and peak diastolic velocity reserve.	139
Fig (18): Correlation between LV mass index and peak systolic velocity reserve	139
Fig (19): Correlation between LV mass index and diastolic velocity integral reserve.	140
