
Transcranial Direct Current Stimulation in Hyperacute Ischaemic Middle Cerebral Artery Infarction: Impact on Outcome

A thesis presented for the partial fulfillment of
MD Degree in Neurology

By

Ahmed Mohammed El Bokl

M.B.B.Ch, M. Sc. Ain Shams University

Supervised By

Prof. Dr. Mohammad Ossama Abdulghani

Professor of Neurology

Faculty of Medicine, Ain-Shams University

Prof. Dr. Nevine Medhat El Nahas

Professor of Neurology

Faculty of Medicine, Ain-Shams University

Prof. Dr. Ayman Mohamed Nassef

Professor of Neurology

Faculty of Medicine, Ain-Shams University

Prof. Dr. Yousry Abo-El Naga Abdel-Hamid

Assistant Professor of Neurology

Faculty of Medicine, Ain-Shams University

Faculty of Medicine
Ain Shams University
Cairo, 2015

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

Acknowledgements

*Firstly, I would like to express my deep gratitude to **Prof. Dr. Mohammad Ossama Abdulghani**, professor of Neurology, faculty of medicine, Ain Shams university, for his guidance and support as well as his invaluable remarks. I extend to him my feelings of being honored to work under his considerate supervision and fatherly encouragement.*

*I would also like to extend my appreciation and thankfulness to **Prof. Dr. Nevine El Nahas**, professor of Neurology, faculty of medicine, Ain Shams university, for her immense patience and great attention to details. Her great knowledge paved the way for this work to appear as it is now.*

*To **Prof. Dr. Ayman Nassef**, professor of neurology, faculty of medicine, Ain Shams university, I express my profound gratefulness. I sincerely appreciate his close and kind supervision as well as his perfectionism which added value to my work.*

*I am also deeply grateful to **Prof. Dr. Yousry Abo-El Naga**, assistant professor of Neurology, faculty of medicine, Ain Shams university. I am grateful for his helpful notes and recommendations. His genuine and kind help enabled me to achieve this work.*

*I am heavily indebted to **Prof. Dr. Tamer Emara**, assistant professor of Neurology, faculty of medicine, Ain Shams university, who provided me with the original idea of this work. His great enthusiasm, encouragement and trust inspired me through hard times.*

*Furthermore, I would like to express my sense of gratitude to **Prof. Dr. Ramez Reda Moustafa** and **Prof. Dr. Amr Abdel Monem**, assistant professors of Neurology, faculty of medicine, Ain Shams university, for the genuine help they provided in statistics and discussion as well as their continuous mentorship.*

*I extend special thanks to my colleagues **Dr. Randa Amin**, **Dr. Shahinaz Helmy** and **Dr. Hosam Shokry**, assistant lecturers of neurology, for their consideration and constant support in many critical situations throughout my work. I also thank my colleagues, residents of neurology department, who helped me*

collect my study subjects specially Amr Said and Mohammed El Shiekh.

Finally, I want to extend my appreciation to all my professors and colleagues at the department of neuropsychiatry, Ain Shams University who influenced, encouraged and inspired me throughout the years.

List of Figures

1	Leão's original illustration of spreading depression	7
2	Dohmen's first ever recording of CSD in human ischaemic stroke	10
3	Effect of spreading depolarization on healthy tissue versus tissue at risk	14
4	Spreading ischaemia in the rat brain	15
5	Biphasic pattern of PID	16
6	Vascular cascade in the ischaemic penumbra	21
7	CSD in relation to body temperature	22
8	Common torpedo electric fish.	41
9	Illustration of Aldini's early tDCS device	42
10	Principle features of tDCS	44
11	Mind Alive Oasis Pro transcranial direct current stimulation device.	57
12	International 10-20 system	59
13	GCS means among active and sham groups at T ₀ , T ₁ and T ₂	71
14	NIHSS means among active and sham groups at T ₀ -T ₄	71
15	FMSUL means among active and sham groups at T ₀ -T ₄	72
16	FMSLL means among active and sham groups at T ₀ -T ₄	72
17	Infarct volume over time in active and sham groups.	74

18	Reduction (%) in infarct volume among active and sham groups	74
19	Subgroups based on stroke subtypes	77
20	GCS means among active and sham groups in the non-watershed subgroup.	79
21	Infarct volume over time among active and sham groups in the non-watershed subgroup.	82
22	Reduction (%) in infarct volume among active and sham groups in the non-watershed subgroup.	82
23	Subgroups based on infarction depth	87
24	GCS means among active and sham groups in the cortical subgroup.	88
25	GCS means among active and sham groups in the deep subgroup.	90

List of Tables

1	Summary of neuroprotective strategies combined with therapeutic hypothermia for the treatment of acute CVS	29
2	Summary of common tDCS adverse effects	48
3	Comparison between active and sham groups as regard sample characteristics.	68
4	Clinical outcome measures and its 5-point assessment among active and sham groups.	70
5	Percent change in clinical outcome measures between T ₀ and T ₁ among active and sham groups	70
6	Infarct volume and percent reduction in volume among active and sham groups.	75
7	Time to treatment in relation to infarct volume.	75
8	Comparison between active and sham groups as regard sample characteristics of the non-watershed subgroup.	78
9	Clinical outcome measures among active and sham groups, in the non-watershed subgroup.	80
10	Infarct volume and percent reduction in volume among active and sham groups in the non-watershed subgroup.	81
11	Time to treatment in relation to infarct volume in the non-watershed subgroup.	81

12	Comparison between active and sham groups as regard sample characteristics of the watershed subgroup.	84
13	Clinical outcome measures among active and sham groups, in the watershed subgroup.	85
14	Infarct volume and percent reduction in volume among active and sham groups in watershed subgroup.	86

List of Abbreviations

AF	Atrial Fibrillation	FMS	Fugl-Meyer Motor Scale
ANOVA	Analysis Of Variance		
COSBID	Cooperative Studies On Brain Injury Depolarizations	FMSLL	Fugl Meyer Motor Subscale For Lower Limb
CSD	Cortical Spreading Depression	FMSUL	Fugl Meyer Motor Subscale For Upper Limb
CVS	Cerebrovascular Stroke	GCS	Glasgow Coma Scale
DM	Diabetes Mellitus	HTN	Hypertension
DWI	Diffusion Weighted Imaging	ISHD	Ischaemic Heart Disease
ECoG	Electrocorticogram	LTD	Long-term Depression
EEG	Electroencephalogram		
ER	Emergency Room	LTP	Long-term Potentiation
FLAIR	Fluid-attenuated Inversion Recovery	M1	Primary Motor Cortex
