..بسم الله الرحمن الرحيم..

( ٤٤ )

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (2000) has published a strategy for the ageing population, which sets out the government's commitment to improve the health and quality of life of older people. The strategy is based on the following principles:

- Older people should be able to live independently and actively in their own homes.
- Older people should be able to access the services and facilities they need to live well.
- Older people should be able to participate in the decisions that affect their lives.
- Older people should be able to live in a safe and secure environment.

The strategy also sets out a number of key objectives, including:

- To reduce the number of older people who are in long-term care.
- To improve the health and quality of life of older people.
- To ensure that older people are able to access the services and facilities they need to live well.
- To ensure that older people are able to participate in the decisions that affect their lives.

The strategy is a key document in the development of policies and services for the ageing population. It provides a framework for the development of policies and services that are based on the principles and objectives of the strategy.

The strategy also sets out a number of key actions, including:

- To develop a national strategy for the ageing population.
- To develop a national framework for the ageing population.
- To develop a national system of care for the ageing population.
- To develop a national system of funding for the ageing population.

The strategy is a key document in the development of policies and services for the ageing population. It provides a framework for the development of policies and services that are based on the principles and objectives of the strategy.

The strategy also sets out a number of key actions, including:

- To develop a national strategy for the ageing population.
- To develop a national framework for the ageing population.
- To develop a national system of care for the ageing population.
- To develop a national system of funding for the ageing population.

## **Abstract**

Omphalocele, as a malformation of the abdominal wall in neonates is still a challenging surgical emergency for the pediatric surgeons. Several prognostic factors have been identified, regarding the prognosis and the outcome of management of omphalocele cases. The aim of this work is to try to make a protocol for the treatment strategy of neonatal omphalocele.

Key words:

(Omphalocele- congenital umbilical hernia- management –  
prognosis-outcome)

# ACKNOWLEDGEMENT

I can not sufficiently express my gratitude and appreciation to my *Professor Dr. Montasser Mohammad El-Kotby* , Professor of Pediatric Surgery, Faculty of Medicine, Cairo University, for his kind approval to supervise this work. The credit of bringing this work to light goes to him.

My warmest thanks go to *Dr. Gamal Hassan El-Tagy*, Assistant Professor of Pediatric Surgery, Faculty of Medicine, Cairo University, for his kind care and keen interest in the progress and accomplishment of this work.

A great help was offered by *Dr. Mohammad Magdy El-Barbary*, Assistant Professor of Pediatric Surgery, Faculty of Medicine, Cairo University. His continuous guidance, assistance and sincere co-operation during the planning of this work were invaluable.
