## ***CHAPTER-1***

### ***INTRODUCTION***

|                                                                                       |    |
|---------------------------------------------------------------------------------------|----|
| 1.1 Pathways of radionuclides in the environment.....                                 | 1  |
| 1.2 Natural occurring radionuclide series.....                                        | 3  |
| 1.3 Anthropogenic radionuclides.....                                                  | 6  |
| 1.4 Radiochemical separation and analysis of different radionuclides of interest..... | 8  |
| 1.4.1 Radiochemical separation and analysis of uranium.....                           | 8  |
| 1.4.2 Radiochemical separation and analysis of thorium.....                           | 9  |
| 1.4.3 Radiochemical separation and analysis of radium.....                            | 10 |
| 1.4.4 Radiochemical separation and analysis of plutonium isotopes.....                | 12 |
| 1.4.5 Radiochemical separation and determination of of Sr-90.....                     | 13 |
| 1.4.6 Radiochemical separation and analysis of cesium-137.....                        | 14 |
| 1.5 Nuclear spectroscopic measurements.....                                           | 15 |
| 1.5.1 Alpha spectroscopic measurements.....                                           | 15 |
| 1.5.2 Gamma spectroscopic measurements.....                                           | 17 |
| 1.5.3 Liquid Scintillation Counting measurements.....                                 | 18 |
| 1.5.4 Gas-flow proportional counter.....                                              | 19 |
| 1.5.5 Alpha liquid scintillation spectroscopy (PERALS).....                           | 19 |
| 1.6 Statistical calculation of relative uncertainty.....                              | 20 |
| 1.7 Aim of work.....                                                                  | 21 |

## **CHAPTER-2**

### **EXPERIMENTAL**

|                                                                                                        |    |
|--------------------------------------------------------------------------------------------------------|----|
| 2.1. Chemicals and Reagents.....                                                                       | 22 |
| 2.2. Sampling.....                                                                                     | 22 |
| 2.3. Naturally Occurring Radionuclides.....                                                            | 24 |
| 2.3.1. Samples preparation.....                                                                        | 24 |
| 2.3.1.1. Ashing and spiking.....                                                                       | 24 |
| 2.3.1.2 Sample digestion.....                                                                          | 29 |
| 2.3.1.3 Sample fusion .....                                                                            | 29 |
| 2.3.2. Radiochemical separation .....                                                                  | 31 |
| 2.3.2.1. Simulation of separation of uranium, thorium and radium.....                                  | 32 |
| A. Iron hydroxide method.....                                                                          | 32 |
| A.1. Radium separation.....                                                                            | 32 |
| A.2. Uranium – thorium separation.....                                                                 | 34 |
| B. TBP Extraction Method.....                                                                          | 36 |
| B.1 Radium separation.....                                                                             | 36 |
| B.2. Uranium - thorium separation.....                                                                 | 36 |
| 2.3.2.2. Radiochemical separation of both uranium, thorium and radium in<br>environmental samples..... | 37 |
| 2.3.2.3 Determination of Ra - 226 in ground water sample.....                                          | 39 |
| 2.4 Anthropogenic Radionuclides.....                                                                   | 41 |
| 2.4.1 Sample Preparation.....                                                                          | 41 |
| 2.4.1.1 Ashing and spiking.....                                                                        | 41 |
| 2.4.1.2. Sample digestion.....                                                                         | 44 |
| 2.4.1.3. Oxidation state adjustment of plutonium.....                                                  | 44 |
| 2.4.2 Separation procedures.....                                                                       | 46 |
| 2.4.2.1. Anion exchange separation of plutonium.....                                                   | 46 |

|                                                                                  |    |
|----------------------------------------------------------------------------------|----|
| 2.4.2.2 Plutonium source preparation.....                                        | 47 |
| 2.4.2.2.1 Micro co-precipitation.....                                            | 47 |
| 2.4.2.2.2 Electrodeposition Process.....                                         | 48 |
| 2.4.3 Separation of cesium by ammonium molybdophosphate (AMP).....               | 48 |
| 2.4.4 Separation of strontium by crown ether.....                                | 49 |
| 2.4.5 Strontium source preparation by gravimetric precipitation.....             | 50 |
| 2.5 Determination of radioactivity levels of strontium-90 in sea water samples.. | 51 |
| 2.5.1 Sample preparation.....                                                    | 52 |
| 2.5.2 Strontium purification.....                                                | 52 |
| 2.6 Spectroscopic equipment.....                                                 | 55 |
| 2.6.1 $\alpha$ -Spectroscopic measuring system.....                              | 55 |
| 2.6.1.1 Instrumentation.....                                                     | 55 |
| 2.6.1.2. Energy and efficiency calibration.....                                  | 56 |
| 2.6.2 $\gamma$ - Spectroscopic measuring system.....                             | 56 |
| 2.6.2.1. Instrumentation.....                                                    | 56 |
| 2.6.2.2 Calibration of working system.....                                       | 57 |
| 2.6.3 Liquid scintillation counting system.....                                  | 57 |
| 2.6.3.1. Instrumentation.....                                                    | 58 |
| 2.6.3.2 Calibration of liquid scintillation for strontium -90 .....              | 58 |
| 2.6.4 $\alpha$ - $\beta$ Proportional Counter.....                               | 63 |
| 2.6.4.1 Instrumentation.....                                                     | 63 |
| 2.6.4.2 Calibration of working system.....                                       | 63 |
| 2.6.5 PERAL $\alpha$ - liquid scintillation counting for radium-226.....         | 67 |
| 2.6.5.1. Instrumentation.....                                                    | 68 |
| 2.6.5.2. Calibration of working system.....                                      | 70 |

## **CHAPTER-3**

### **RESULTS AND DISCUSSION**

|                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------|-----|
| 3.1 Naturally Occurring Radionuclides.....                                                                | 72  |
| 3.1.1. Ra analysis.....                                                                                   | 72  |
| 3.1.1.1 Determination of chemical recovery and counting efficiency.....                                   | 73  |
| 3.1.1.2 The counting efficiency of Ra-226 at 186 keV using $\gamma$ - spectroscopy.....                   | 75  |
| 3.1.1.3 Counting efficiency of Ra-226 for $\alpha$ -LSC (PERALS).....                                     | 75  |
| 3.1.1.4 Chemical Recovery of Radium-226 measurement by different simulated<br>methods.....                | 77  |
| 3.1.1.5 Radium-226 measurements in environmental samples.....                                             | 77  |
| 3.1.1.5.1 Chemical recovery for environmental samples.....                                                | 80  |
| 3.1.1.5.2 Determination of radioactivity level of Ra-226 by $\gamma$ -spectroscopy.....                   | 80  |
| 3.1.1.5.3 Determination of radioactivity level of Ra-226 by PERALS.....                                   | 84  |
| 3.1.2. Thorium analysis .....                                                                             | 86  |
| 3.1.2.1 Th-229 measurements in simulated tests.....                                                       | 86  |
| 3.1.2.2 Th measurements in environmental sample.....                                                      | 88  |
| 3.1.2.2.1 Chemical recovery of Th isotopes .....                                                          | 88  |
| 3.1.2.2.2 Determination of radioactivity levels of Th isotopes by Si (Li) $\alpha$ -<br>spectroscopy..... | 91  |
| 3.1.2.2.3 Determination of radioactivity levels of Th-232 daughter.....                                   | 94  |
| 3.1.3 Uranium analysis.....                                                                               | 98  |
| 3.1.3.1 U-232 measurements in simulated tests.....                                                        | 99  |
| 3.1.3.2. Uranium measurements in environmental samples.....                                               | 99  |
| 3.1.3.2.1 Chemical recovery of uranium isotopes .....                                                     | 100 |
| 3.1.3.2.2 Determination the radioactivity levels of uranium isotopes.....                                 | 103 |
| 3.1.3.2.3 Comparison between radioactivity level of U-238 and its relative<br>daughter.....               | 105 |

|                                                                                            |     |
|--------------------------------------------------------------------------------------------|-----|
| 3.1.3.2.4. Determination of isotopic composition of uranium.....                           | 109 |
| 3.2 Determination of Anthropogenic Radionulides in Environmental Reference<br>Samples..... | 113 |
| 3.2.1 Plutonium measurements.....                                                          | 113 |
| 3.2.1.1 Counting efficiency.....                                                           | 114 |
| 3.2.1.2 Chemical Recovery of Pu-242 in each sample.....                                    | 114 |
| 3.2.1.3 Specific radionativity level of plutonium isotopes.....                            | 114 |
| 3.2.2 Cs-137 measurements.....                                                             | 118 |
| 3.2.2.1 Counting efficiency.....                                                           | 118 |
| 3.2.2.2 Chemical recovery of Cs-137.....                                                   | 118 |
| 3.2.2.3 Specific radioactivity level of Cs-137.....                                        | 120 |
| 3.2.3 Sr - 90 measurements.....                                                            | 120 |
| 3.2.3.1 Counting efficiency and contribution factor.....                                   | 124 |
| 3.2.3.2 Chemical recovery determination of Sr-90.....                                      | 124 |
| 3.2.3.3 Specific radioactivity levels of Sr-90 in test samples.....                        | 124 |
| 3.2.4 Sr - 90 measurements Mediterranean sea water.....                                    | 127 |
| 3.2.4.1 Chemical recovery determination of Sr-90 in sea water.....                         | 127 |
| 3.2.4.2 Specific radioactivity level of Sr-90 in sea water samples.....                    | 130 |
| 3.3 Conclusion.....                                                                        | 133 |
| Summary.....                                                                               | 136 |
| References.....                                                                            | 143 |
| Arabic summary.....                                                                        | 149 |

|                                                                                                                                                                                             |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Table(2-1) Chemicals and reagents.....                                                                                                                                                      | 23 |
| Table (2-2) Selected environmental samples for analysis.....                                                                                                                                | 25 |
| Table (2-3) Mean nuclear characteristics of some radionuclides of<br>interest.....                                                                                                          | 26 |
| Table (2-4) Specific data of radiotracers for analysis .....                                                                                                                                | 27 |
| Table (2-5) Determination the sample weight for ashing.....                                                                                                                                 | 28 |
| Table (2-6) Check the residual activity by proportional counter of the digested<br>sample before and after molten salt fusion.....                                                          | 30 |
| Table (2-7) Ash/ Dry ratios of IAEA reference samples.....                                                                                                                                  | 43 |
| Table (2-8) chemical recovery determination of Sr- 90 efficiency calibration....                                                                                                            | 61 |
| Table (2-9) Efficiency calibration of LSC for Sr-90 measurements.....                                                                                                                       | 62 |
| Table (2-10) Determination of chemical recovery of yttrium oxalate for<br>efficiency calibration of proportional counter.....                                                               | 65 |
| Table (3-1) Determination of chemical recovery of Ra. 226 using non isotopic<br>tracer Ba-133 for efficiency calibration of both $\gamma$ - and $\alpha$ -spectroscopy.....                 | 74 |
| Table (3-2) Determination of counting efficiency of Ra-226 using PERALS<br>liquid scintillation alpha spectrometry.....                                                                     | 76 |
| Table (3-3) Determination the chemical recovery of Th-229, U-232 and Ba- 133<br>and Ra-226 in two simulate tests for Ra separation by $\text{Fe}(\text{OH})_3$ and TBP.....                 | 78 |
| Table (3-4) Determination the radioactivity levels of Ra-226 by PERALS<br>spectrometry in two simulation tests separated by $\text{Fe}(\text{OH})_3$ and (TBP).....                         | 79 |
| Table (3-5) Determination the chemical recovery of Ra-226 using non isotopic<br>tracer Ba-133 in several Egyptian soil samples and IAEA reference<br>samples by $\gamma$ -spectroscopy..... | 81 |
| Table (3-6) Determination of the radioactivity level of Ra-226 by<br>$\gamma$ -spectroscopy in Egyptian soil and IAEA reference samples.....                                                | 83 |

|                                                                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Table (3-7) Determination of the radioactivity levels of Ra-226 by PERAL<br>γ-spectroscopy in Egyptian soil and IAEA sediment reference samples.....                                 | 85  |
| Table (3-8) Determination the chemical recovery of thorium Isotopes using<br>Th-229 prepared by electrodeposition process.....                                                       | 89  |
| Table (3-9) Determination the chemical recovery of th isotopes in different<br>environmental samples using th-229 Radiotracer by α-spectroscopy.....                                 | 90  |
| Table (3-10a) Determination of the radioactivity levels of Th isotopes in different<br>environmental samples using th-229 radiotracer by α-spectroscopy.....                         | 92  |
| Table (3-10b) Determination of the relative uncertainty of Th isotopes in different<br>environmental samples .....                                                                   | 93  |
| Table( 3-11) Determination of the radioactivity levels of th-232 daughters<br>in different environmental samples using α-spectrometry.....                                           | 97  |
| Table (3-12) Determination the chemical recovery of U isotopes in different<br>environmental samples using U-232 radiotracer for sources prepared by<br>electrodeposition.....       | 101 |
| Table (3-13) Determination the chemical recovery of U isotopes In different<br>environmental samples using U-232 radiotracer for sources prepared<br>by micro co-precipitation ..... | 102 |
| Table (3-14) Determination the radioactivity levels of uranium isotopes<br>in different environmental samples using U-232 radiotracer by<br>α-spectroscopy.....                      | 104 |
| Table (3-15) Radioactivity level of U-238 and its α-emitting relative daughters....                                                                                                  | 107 |
| Table (3-16) Determination of the isotopic composition of uranium in different<br>environmental samples using by α-spectroscopy.....                                                 | 110 |
| Table (3-17) Concentration of natural occurring radionuclides (U, Th and Ra)<br>in different environmental samples in ppm.....                                                       | 112 |
| Table (3-18) Determination of chemical recovery for Pu-239 + 240 and anthropogenic<br>Pu-238 in different reference environmental samples using pu-241 tracer.....                   | 115 |
| Table (3-19) Calculation of specific radioactivity levels of pu-239 + 240 and<br>pu-238 in Reference samples.....                                                                    | 117 |
| Table (3-20) Determination the chemical recovery of Cs-137 based on<br>Cs-134 in different environmental reference samples.....                                                      | 121 |
| Table (3-21) calculation of specific radioactivity levels of Cs-137 in reference<br>Samples.....                                                                                     | 122 |
| Table (3-22) Determination of the chemical recovery of Sr by gravimetry<br>in different environmental samples.....                                                                   | 125 |

Table (3-23) Calculation of specific radioactivity levels of Sr-90 in  
reference samples..... 126

Table (3-24) The ratios between the different anthropogenic radionuclides  
(Pu, Cs137 and Sr-90) in different reference samples..... 128

Table (3-25) Calculation of specific radioactivity levels of Sr-90 in  
Mediterranean sea water..... 129
