

List of abbreviations

ALP	Alkaline Phosphatase
ALT	Alanine transaminase
ASGE	American society for gastrointestinal endoscopy
AST	Aspartate transaminase
BDI	Bile duct injury
CBD	Common bile duct
CBDS	Common bile duct stones
CC	Cholangio-carcinoma
CCL	Cholecysto-Choledocho-lithiasis
CT	Computed tomography
EAES	European association for endoscopic surgery
EGD	Esophago-Gastro-Duodenoscopy
ERC	Endoscopic Retrograde Cholangiography
ERCP	Endoscopic Retrograde Cholangiopancreatography
ES	Endoscopic Sphincterotomy
EUS	Endoscopic Ultrasound
Fr	French
GGT	Gamma glutamyl transferase
HIDA	Hydroxyl-Imino-Diacetic-Acid
ICG	Indocyanine green
INR	International normalized ratio
IOC	Intraoperative cholangiography
LC	Laparoscopic cholecystectomy
LCBDE	Laparoscopic common bile duct exploration
LFTs	Liver function tests
LUS	Laparoscopic ultrasound
MHZ	Mega-Hertz
MRCP	Magnetic resonance cholangiopancreatography
NOTES	Natural orifice transluminal endoscopic surgery
NSAIDs	Non-steroidal anti-inflammatory drugs
OPUS	One port umbilical surgery

PTC	Percutaneous transhepatic cholangiography
PV	Portal vein
RCT	Randomized controlled trial
RVT	Rendez-vous technique
SILS	Single incision laparoscopic surgery
SMA	Superior mesenteric artery
SMV	Superior mesenteric vein
SPA	Single port access
TCBDE	Trans-cystic bile duct exploration
TUS	Transabdominal ultrasound
TVCCE	Trans-vaginal cholecystectomy
US	Ultrasound

List of figures

No.	Figure	Page
1	<i>Anatomy of biliary tree</i>	12
2	<i>variations of cystic duct junction.</i>	14
3	<i>Patterns of biliary-pancreatic duct junction and insertion into the duodenal wall.</i>	16
4	<i>Diagnostic endoscopic retrograde cholangiopancreatography. Pancreatic duct orifice</i>	16
5	<i>Sphincter of Oddi</i>	17
6	<i>usual anatomy of Calot triangle</i>	18
7	<i>blood supply of bile ducts</i>	20
8	<i>Variability in cystic duct anatomy</i>	22
9	<i>Variations in the arterial supply to the gallbladder</i>	23
10	<i>Appearance of fundus of gallbladder, first look</i>	25
11	<i>laparoscopic view of gall bladder in situ, retracted upwards by grasper</i>	25
12	<i>Critical view of safety</i>	26
13	<i>A view from below demonstrates the point for beginning dissection (arrow). Just below this point can be seen a cleft in the liver known as Rouvier's sulcus</i>	27
14	<i>Ultrasound examination. Gallstones noted at the neck of the gall bladder with associated acoustic shadowing.</i>	37
15	<i>Transverse sonogram of the liver reveals “too many tubes” (circled areas), consistent with intrahepatic biliary dilatation</i>	37
16	<i>Longitudinal view of the common bile duct (cbd) shows an echogenic stone (arrow) that produces acoustic shadowing (arrowheads)</i>	38
17	<i>Ultrasound of dilated biliary tree. The CBD is dilated. As it travels parallel to the portal vein</i>	38
18	<i>Endoscopic ultrasonography. CBD, common bile duct; PD, pancreatic duct</i>	39
19	<i>radial EUS showing choledocholithiasis in the distal CBD</i>	40
20	<i>Solid, irregular, hypoechoic mass (M) in the pancreatic head seen with abrupt termination of a dilated common bile duct</i>	40
21	<i>ERCP: normal cholangiogram</i>	43
22	<i>ERCP showing a common bile duct stone and guidewire</i>	43

	<i>prior to the performance of a sphincterotomy</i>	
23	<i>Mirizzi syndrome. A large gallbladder calculus has eroded into the common hepatic duct (arrow),</i>	43
24	<i>ERCP showing a carcinoma of the head of the pancreas</i>	44
25	<i>an ERCP from the same patient showing a leak from the cystic duct stump (arrow)</i>	44
26	<i>ERCP, a filling defect noted within the lumen of the common bile duct</i>	44
27	<i>Sclerosing cholangitis in a patient with ulcerative colitis visualised by ERCP</i>	45
28	<i>Normal MRCP demonstrating the gallbladder and common bile duct. The pancreatic duct is also displayed</i>	46
29	<i>MRCP demonstrating cholelithiasis and choledocholithiasis</i>	46
30	<i>MRCP, the dilated common bile duct ends abruptly, with a convex intraluminal filling defect (arrow) consistent with choledocholithiasis</i>	47
31	<i>Transhepatic cholangiogram showing a stricture of the common hepatic duct</i>	48
32	<i>Primary biliary sclerosis with typical irregularity and beading of large ducts</i>	48
33	<i>normal intraoperative cholangiogram, no filling defects</i>	49
34	<i>An intraoperative cholangiogram showing common bile duct stone (arrow)</i>	51
35	<i>intraoperative cholangiogram demonstrating multiple CBD stones with one impacted 3 cm proximal to ampulla</i>	51
36	<i>Hepatocellular carcinoma in a noncirrhotic liver</i>	53
37	<i>Radionuclide biliary (HIDA) scans. A, With and B, without visualization of the gallbladder</i>	55
38	<i>photograph of a liver and a gallbladder from the mummy of a priestess of Amenhotep of the 18th dynasty (circa 1500 B.C.). Presented to the Royal College of Surgeons Museum in London by Sir Grafton Elliot-Smith</i>	56
39	<i>Karl Langenbuch (1846-1901)</i>	58
40	<i>Theodore Kocher</i>	58
41	William Halsted	59
42	Ludwing Curvoisier	59
43	<i>Professor Pablo Luis Mirizzi</i>	59
44	<i>Open common bile duct exploration. (a) The common bile duct is opened vertically between laterally positioned stay</i>	61

	<i>sutures. (b) A catheter is then used to irrigate and flush stones</i>	
45	<i>a T tube is fashioned and is placed into the duct. (b) Interrupted 4-0 absorbable sutures are used to close the choledochotomy snug</i>	62
46	<i>side-viewing endoscope</i>	66
47	<i>Therapeutic ERCP. After endoscopic sphincterotomy, CBD stones may be retrieved with balloons (a) or baskets (b, c, d)</i>	66
48	<i>a side-viewing duodenoscope is positioned opposite the papilla, which can then be cannulated using either a catheter or a guidewire</i>	67
49	<i>Endoscopic view of cannulation attempt with guidewire sounding</i>	67
50	<i>Endoscopic view showing a picture of the sphincterotomy performing a sphincterotomy</i>	68
51	<i>Endoscopic common bile duct stone extraction with the use of wire basket</i>	69
52	<i>ERCP showing a nondilated bile duct containing a single distal stone (white arrow) and extraction balloon (black arrow, right) placed above the stone</i>	69
53	<i>biliary sphincterotomy and stent placement</i>	70
54	<i>Self-expanding metallic stent</i>	70
55	<i>Multiple common bile duct stones lying above a mid-common bile duct stricture and not amenable to endoscopic extraction. Biliary drainage is maintained with two endoscopically placed stents</i>	70
56	<i>pathophysiology of cholangitis; combination of biliary obstruction and bactibilia. Bacteria reflux into the hepatic veins and perihepatic lymphatics, resulting in systemic bacteremia</i>	75
57	<i>Room setup for minimally invasive surgery. All core equipment is located on easily movable consoles</i>	79
58	<i>North American positioning (a), European positioning</i>	80
59	<i>port placement for LCBDE</i>	81
60	<i>The gallbladder in situ. The gallbladder is being suspended by the fundus to expose the infundibulum and porta hepatis</i>	82
61	<i>The superior border of the cystic duct has been dissected. Funneling of the gallbladder into the cystic duct is clearly</i>	82

	seen (arrow)	
62	<i>Triangle of Calot</i> that has been dissected. The cystic artery can be seen crossing the dissected area upward and to the left	82
63	incision of the cystic duct	83
64	<i>Catheterization of the cystic duct with cholangiocatheter</i>	84
65	<i>Olsen cholangiogram forceps securing within the the catheter cystic duct</i>	84
66	<i>laparoscopic cholangiography. The catheter has been advanced through the specialized cholangiogram clamp into the cystic duct</i>	84
67	<i>Preoperative cholangiography using a radiolucent tabletop</i>	85
68	<i>IOC showing absence of a bile duct calculus with free flow of contrast medium into the duodenum</i>	85
69	<i>IOC showing a filling defect in distal CBD with no flow of contrast into the duodenum</i>	85
70	<i>A transverse intraoperative ultrasound scan of the hepatoduodenal ligament reveals a typical Mickey Mouse head appearance</i>	86
71	<i>Ballon dilatation of cystic duct</i>	87
72	<i>Laparoscopic choledochotomy for common bile duct exploration</i>	89
73	<i>A V-shaped incision was made using electrocautery along the medial wall of the cystic duct and the lateral wall of the common hepatic duct</i>	90
74	<i>Confirmation of CBD clearance using the choledochoscope through a V-shaped incision.</i>	91
75	<i>mechanical flushing of CBD stones</i>	91
76	<i>Stone retrieval using a balloon catheter</i>	92
77	<i>stone extraction by Fogarty catheter ballon Technique</i>	93
78	<i>Dormia basket</i>	93
79	<i>transystic choledochoscopy over guidewire</i>	93
80	<i>transystic wire basket extraction of stone through choledochoscope</i>	94
81	<i>Choledochoscope with Dormia basket is used to extract stone</i>	95
82	<i>Stone retrieval basket inserted through cholangiography catheter</i>	95
83	<i>Visualization of distal CBD using choledochoscope</i>	96

84	<i>placement of T-tube</i>	97
85	<i>CBD suturing after t-tube placement</i>	98
86	<i>closure of choledochotomy around a T-Tube</i>	98
87	<i>primary closure of CBD</i>	99
88	<i>Decompression of the extrahepatic biliary tract by trans-cystic duct drainage cannula</i>	99
89	<i>cystic duct ligation with endoloop</i>	100
90	<i>Separation of gallbladder from liver using hook</i>	101
91	<i>laparoscopic choledocho- duodenostomy</i>	102
92	<i>Laparoscopic transection choledochoduodenostomy for multiple ductal calculi and grossly dilated duct</i>	102
93	<i>laparoscopic cholecysto-jejunostomy</i>	103
94	<i>Stones extracted from the common bile duct by laparoscopic transcystic instrumentation with a wire retrieval basket</i>	105
95	<i>Transgastric cholecystectomy using natural orifice transluminal endoscopic surgery technology</i>	108
96	<i>Room setup and position of surgeon and assistant for robotic surgery</i>	109

List of tables

1	<i>liver function aberrations in obstructive and hepatocellular jaundice</i>	35
2	<i>difficult bile duct stones at ERCP</i>	71
3	<i>comparison between one vs two-staged management of CBD stones in multiple trials</i>	114
4	<i>comparison of the available approaches to concomitant lithiasis of gallbladder and common bile duct</i>	114

List of Diagrams

1	<i>ASGE guidelines for management of choledocholithiasis</i>	117
----------	--	------------

Approach To Jaundiced Patient

• Risk assessment	28
• Clinical assessment	29
• Laboratory tests	33
Liver profile	33
Coagulation profile	35
CBC	35
Serologic tests	35
Urine analysis	36
• Imaging studies	36
Ultrasonography	37
Abdominal	37
Endoscopic	39
Laparoscopic	40
Cholangiography	42
ERCP	42
MRCP	45
PTC	47
IOC	49
Computed tomography	53
Choledochoscopy	53
Intraductal endoscopy	54
Biliary Scintigraphy	54

ERCP OR LCBDE

- Common practice 110
- ERCP: advantages and drawbacks 110
- LCBDE: advantages and challenges 111
- What is the best strategy? 111
- Principles of selection 114

Management of CBD Stones

• Development of biliary surgery	56
Early times	56
Modern surgery	57
CBD surgery	59
• Therapeutic options for CBDS	60
Open surgery.....	60
Endoscopic management	64
Laparoscopic managent	74
Preoperative preparation	76
Operative room setup	77
Operative technique	81
Special postoperative care	104
Complications of LCBDE	105
Emerging techniques	108

Anatomy

• Surgical anatomy	12
Common hepatic duct.....	12
Gall bladder	13
Cystic duct	13
Common bile duct	14
Triangle of Calot	17
Arterial supply	18
Venous drainage	21
Lymphatics	21
• Aberrant anatomy	22
Ductal anomalies	22
Vascular anomalies	23
• Laparoscopic anatomy	24
Laparoscopic view	24
Common bile duct	25
Gall bladder-cystic duct junction	26
Critical view of safety	26
Rouvieres sulcus	26

Laparoscopic management of Calcular Obstructive Jaundice

Essay

Submitted for the fulfillment of master degree in general surgery

By

علاج الصفراء الانسدادية الناتجة عن حصوات بمنظار البطن الجراحي

رسالة

توطئة للحصول علي درجة الماجستير في الجراحة العامة

مقدمة من

الطبيب / ريمون نسيم صبحي

تحت إشراف

الأستاذ الدكتور / إسماعيل عبد الحكيم قطب

أستاذ الجراحة العامة

كلية الطب – جامعة عين شمس

الأستاذ الدكتور مساعد / محمد عبد المنعم مرزوق

أستاذ مساعد الجراحة العامة

كلية الطب – جامعة عين شمس

الدكتور / كمال ممدوح كمال

مدرس الجراحة العامة

كلية الطب – جامعة عين شمس
