Abstract

Researcher's Name: Amira Ahmed Mahmoud Abd-Allah.

Research Title: *Using E-portfolio for developing preparatory stage students' EFL critical writing skills.*

Source: Ain shams University, Faculty of Education, Curriculum & Instruction: TEFL Department. Cairo, Egypt.

The purpose of the present study was to investigate the effect of using e-portfolio for developing the 2nd year preparatory stage students' EFL critical writing skills. Participants of the present study were 60 second year prep stage students (N=60). They were assigned equally to two groups; a control group and an experimental one. The instruments used in the present study were a pre-post test to measure the students' critical writing skills, and a critical writing skills' checklist. The suggested program was administrated to the experimental group in the first term of the academic school year 2014-2015 at Elshrouk private school in Giza governorate. Results showed that the program was effective in enhancing the experimental group members' critical writing skills. Implications and recommendations, as well as suggestions for further studies were provided.

Key Words: e-Portfolio - critical Writing Skills .

Acknowledgements

**First and foremost thanks to Allah,
the most Gracious and Merciful.**

I wish heartily to express my deep appreciation and profound gratitude to DR. ***Asmaa Ghanem Gheith***, Professor of curriculum & instruction, Faculty of Education, Ain shams university, for her kind close supervision and encouragement. She has her finger prints on every part of this thesis. She enriched my personality and career with her vast experience. I really appreciate her agreement for giving me the honor of working under her supervision.

I owe gratitude to ***Dr. Ramadan Farid Nassar*** who provided time throughout the whole work.

Thanks are extended to ***DR. Magdy Mahdy Ali***, Professor of curriculum & instruction, Faculty of Education, Ain shams university and ***DR. Eid Abdelwahed Ali***, Professor of curriculum & instruction, Faculty of education, Al Minya university and Director of academic professional for teachers for accepting and examining this research and to be part of the dissertation committee giving their valuable time and effort to enrich and modify this work.

I am deeply and forever indebted to ***my lovely mother***, who taught me to be responsive to today's realities. Really, this work would not have been possible without her support and help.

I owe a depth of gratitude to my Uncle ***Dr. Fathalla*** for his support and encouragement.

I would like to thank **MR. Essam Negm**, Director of Alshrouk private school for his agreement of applying the suggested program in his school.

I would like to thank each student in my study group, without their participations in the experimental part of this study, I could not have obtained any realistic data.

CHAPTER ONE

BACKGROUND AND

PROBLEM

CHAPTER ONE

Background and problem

Introduction:

In this age the speed at which technology has developed plays a major role in the changes taking place around us. Technological devices are definitely influential in our lives. It can enhance the learning process in schools in various ways. With the increasing popularity of computer technology, it is essential for administrators to encourage computer technology in the education system.

Technology is important in education because it motivates us to reconsider how people learn, how they are empowered, and the nature of learning and useful information is. We cannot avoid the role of technology in our schools because it enables educators to re-evaluate the nature of what and how we teach.

Technology is at the core of virtually every aspect of our daily life and work. We need to leverage it to provide powerful learning experiences and content, as well as resources and assessments that measure the students' achievement in more complete, authentic, and meaningful ways. Technology-based learning and assessment systems will be pivotal in improving the students' learning and generating data that can be used to continuously improve the education system at all levels. Technology will help us execute collaborative teaching strategies combined with professional learning that better prepare and enhance educators.

(National Education Technology Plan, 2010)

One of the most important uses of technology is in the field of assessment. Assessment that makes use of technology is far from being traditional.

Traditional assessments, which are made according to a student's memory of the messages given by instructors, are unable to effectively measure the results of these two learning theories. The changes in the student's cognition and learning process, involvement and interaction have become the new foundation for learning effect assessment. (skaalid ,2003)

Therefore, when traditional assessment is unable to effectively reflect a student's learning process, there is a need for new types of assessment.

E-portfolios are a valuable learning and assessment tool. An e-portfolio is a digitized collection of artifacts including demonstrations, resources and accomplishments that represent an individual, group, or institution. This collection can be comprised of text-based, graphic, or multimedia elements archived on a website or on other electronic media such as a CD-Rom or DVD.

An e-portfolio is more than a simple collection. It can also serve as an administrative tool to manage and organize work created with different applications and to control who can see the work. Eportfolios encourage personal reflection and often involve the exchange of ideas and feedback.

In general, e-portfolios are helping students become critical thinkers and aiding in the development of their writing and multimedia communication skills. E-portfolios can help students

learn information and technology literacy skills and how to use digital media. **(Lorenzo & ittelson,2005).**

(Thomas, 2000) declared that critical writing is a kind of self-expression or personal visions. It is innovation not imitation and it is characterized by the beauty of language. It has a strong influence on the listeners and readers' minds. It helps to develop imagination and creativity. It starts innate and develops by training. Critical writing provides a fertile area to practice the use of language, as it helps to master the skills of reading, writing and enables the students to express thoughts and emotions and transfer them to the others.

Success in teaching critical writing is based on an interesting education process. That is far from the traditional method of teaching. Critical writing is viewed as a productive skill as well as, it is related to the critical ability that not everybody has. Critical writing, thus, is one of the most difficult skills.

Because of the tremendous development in the field of communication and information, and what the age of globalization has imposed, openness to different cultures, in addition to the complexity of life, innovative non-traditional solutions for old problems was necessary to develop critical writing skills to the learners. This will not come unless there is sufficient awareness of the importance of transferring from instructional goals to the conservation to move towards a culture of innovation, and must use methods and modern trends that make education based on the higher

levels, hence the need to use e-portfolio for developing preparatory stage students' critical writing skills.

Context of the problem:

There are no space for piling papers or accumulating materials for learning and assessment in the classrooms. To have access to the students' performance / results anytime, anywhere, e-portfolio is one of the most important devices for analyzing and judging the students' work.

An e-portfolio is more than a simple collection. It can also serve as an administrative tool to manage and organize work created with different applications and to control who can see the work. E-portfolios encourage personal reflection and often involve the exchange of ideas and feedback.

In general, e-portfolios are helping students become critical thinkers and aiding in the development of their writing and multimedia communication skills. E-portfolios can help students learn information and technology literacy skills and how to use digital media. **(Lorenzo and Ittelson, 2005).**

As the world changes, technology should be connected to assessment. Electronic assessment is a process of assessment through the use of multiple electronic media as a part of the e-learning process.

(Reynolds, 2000) declared that critical writing is a kind of self-expression or personal visions. It is innovation not imitation and it is characterized by the beauty of language. It has a strong influence on the listeners and readers' minds. It helps to develop

imagination and creativity. It starts innate and develops by training. Critical writing provides a fertile area to practice the use of language, as it helps to master the skills of reading and writing, and enables the students to express thoughts and emotions and transfer them to the others.

Success in teaching critical writing is based on an interesting education process. That is far from the traditional method of teaching. Critical writing is viewed as a productive skill , as well as, it is related to the critical ability that not everybody has. Critical writing, thus, is one of the most difficult language arts.

Because of the tremendous development in the field of communication and information, and what the age of globalization has imposed, openness to different cultures, in addition to the complexity of life, innovative non-traditional solutions for old problems was necessary to develop critical writing skills to the learners. This will not be unless there is sufficient awareness of the importance of transferring from instructional goals to the conservation to move towards a culture of innovation, and must use methods and modern trends that make education based on technology, hence the need to use e-portfolio for developing preparatory stage students' critical writing skills.

In a study conducted in the **University of Leceister, (2009)** an important question was raised. Why there is a need for cw?

With critical writing students are participating in the academic debate. This is more challenging and risky. Students need to weigh up the evidence and arguments of others, and to contribute their own. Students will need to consider the quality of the evidence and

argument they have read, identify key positive and negative aspects they can comment upon; assess their relevance and usefulness to the debate that they are engaging in for their assignment, and identify how best they can be woven into the argument that they are developing.

The pilot study:

The current research problem is the weakness of the preparatory stage students in critical writing skills. Therefore, the researcher made two pilot studies to further investigate this problem.

***First** a questionnaire was designed for English teachers and supervisors in the preparatory stage, where the researcher conducted the pilot study, the schools were Pioneer, Royal international, Ecole Franco city, Badr tiger.. and other schools at El-Mohandseen and 6th of October city. The questionnaire presented in the form of a structure interview (**appendix A**)

The researcher got the following results:

- 1- Ten teachers mentioned that the preparatory stage students do not know what is critical writing?. Four teachers saw that the class time is not enough for developing this linguistic domain. Three of them mentioned that the lack of supported devices of the learning process like, labs and school magazines may be the reason, and three others referred to the lack of clear strategy that describes how to develop critical writing. Five teachers indicated that most teachers do not care for developing the critical reading and writing, as most students do not prefer to participate or engage in dialogues during class.
