ACKNOWLEDGEMENT

Thank God, the beneficent, the merciful, for helping me to accomplish this work.

I wish to express my deepest gratitude and appreciation to my supervisors for their guidance and encouragement.

*It is a great pleasure to express my deepest gratitude and indebtedness to **Prof. Dr. Medhat attia**, Professor of Mental Health, High Institute of Public Health, Alexandria University, for his helpful advice generous supervision, and for suggestion of the research point..*

*My sincerest thanks and warmest appreciation to **Prof. Dr. Enaya Abd El Kader** Professor of School Health, High Institute of Public Health, Alexandria University, for her precise, close, and valuable supervision, helpful suggestions and constructive criticism.*

*It is with great pleasure, deep satisfaction and gratitude that I acknowledge the collaboration of **Prof. Dr. Samiha Mokhtar** Professor of Biostatistics, High Institute of Public Health, Alexandria University. She gave generously and patiently her precious time in continuous encouragement and excellent supervisions.*

*Great thanks are due to **Dr. Ashraf Abdel Hamid** Assistant Professor of School Health, High Institute of Public Health, Alexandria University.*

*No words can express my appreciation to **Dr. Mona Shama** Assistant Professor of Health Education, High Institute of Public Health, Alexandria University, for her unlimited effort, cooperation, supervision and her immense help over the course of this work.*

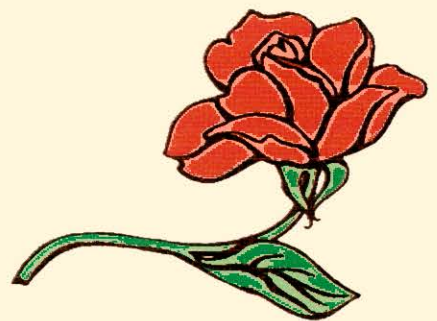

My thanks are extended to all members of Health Insurance Organization in Alexandria, specifically doctors working in Allergy, Diabetes and, Cancer clinics (Sporting Insurance Student's Hospital) for their cooperation. In particular I would express my greatest appreciation to all medical and paramedical staff working in Allergy Clinic for the facilities they provided me during my work. I am also grateful for all patients and their mothers for helping me in accomplishing this work.

Last but not least I present my sincere thanks and appreciation to my husband whose precious understanding and support were indeed helpful in accomplishing this work.

Dedicated to

My Dear Parents
Encouraging Husband,
and lovely Moustafa
and Menna

List of Tables

Table	Page
(I) Distribution of the sample (chronically ill and healthy children) according to their sociodemographic characteristics.	73
(II) Distribution of the chronically ill children according to their sex and type of chronic illness.	74
(III) Mean age, time since diagnosis of chronically ill children	74
(IV) Distribution of the sample (chronically ill and healthy children) according to interparental relationship.	75
(V) Distribution of the sample (chronically ill and healthy children) according to their relationships with others.	76
(VI) Distribution of the sample (chronically ill healthy children) according to the attitude of the care giver towards the child.	78
(VII) Distribution of the sample (chronically ill and healthy children) according to the presence of hobbies.	80
(VIII) Distribution of the sample (chronically ill and healthy children) according to their scholastic achievement.	80
(IX) Distribution of the sample (chronically ill and healthy) according to the occurrence of bad life events in the last 6 months	82
(X) Distribution of the sample (chronically ill and healthy children) according to psychosocial adjustment, self-esteem, maternal depression, and family function	87
(XI) Risk of depression and family dysfunction among chronically ill children as compared to healthy group.	89

Table		Page
(XXV)	Distribution of the chronically ill children according to the duration of hospitalization and psychosocial adjustment.	111
(XXVI)	Distribution of the chronically ill children according to the duration of absentism and psychosocial adjustment	113
(XVII)	Comparison between intervention group and control group before intervention	115
(XXVIII)	Mean prof PAS III sub scale among intervention and control group before and after intervention program.	116
(XXIX)	Mean percentage change for intervention and control group in relation to PARS III subscale score	117
(XXX)	Mean self-esteem, knowledge, and asthma severity among intervention and control group before and after intervention program.	120
(XXXI)	Mean percentage change for intervention and control group in relation to knowledge, self esteem, and asthma severity	120
(XXXII)	Comparison of locus of control sub scale for the intervention group before and after intervention program.	122
(XXXIII)	Stepwise logistic regression of dependent variable (adjustment) on different independent variables for (cases and controls)	124
(XXXIV)	Stepwise logistic regression of dependent variable (adjustment) on different independent variables for (cases).	125

List of Figures

Figure		Page
(1)	Percentage of children (chronically ill and healthy) having good relations with their surroundings.	77
(2)	Attitudes of care-giver towards the children (chronically ill and healthy)	79
(3)	Distribution of the sample (chronically ill and healthy) according to their scholastic achievement	81
(4)	Percentage of children (chronically ill and healthy) having psychosocial maladjustment, low self-esteem, maternal depression, and family dysfunction..	88
(5)	Percentage of chronically ill children having psychosocial maladjustment, low self-esteem, maternal depression, family dysfunction.	91
(6)	Distribution of the chronically ill children according to their self-esteem and psychosocial adjustment.	101
(7)	Distribution of the chronically ill children according to their knowledge about their disease and psychosocial adjustment.	102
(8)	Distribution of the chronically ill children according to their socioeconomic level and psychosocial adjustment.	106
(9)	Distribution of the chronically ill children according to their maternal depression and psychosocial adjustment.	107
(10)	Distribution of the chronically ill children according to their maternal depression and psychosocial adjustment	109

Table		Page
(XII)	Distribution of the chronically ill children according to type of chronic illness and psychosocial adjustment, self-esteem, maternal depression and family function.	90
(XIII)	Risk of psychosocial maladjustment, low self-esteem, maternal depression and family dysfunction among chronically ill children according to type of disease in relation to healthy children.	92
(XIV)	The mean scores of the PARS III sub-scale among chronically ill and healthy children	96
(XV)	The mean scores of PARS III subscale among the chronically ill children according to the type of illness	96
(XVI)	Distribution of the chronically ill children according to their sex and psychosocial adjustment.	99
(XVII)	Distribution of the chronically ill children according to their chronological age and psychosocial adjustment.	99
(XVIII)	Distribution of the chronically ill children according to their self-esteem and psychosocial adjustment.	100
(XIX)	Distribution of the chronically ill children according to their knowledge about their disease and psychosocial adjustment	100
(XX)	Distribution of the chronically ill children according to their socioeconomic level and psychosocial adjustment.	105
(XXI)	Distribution of the chronically ill children according to their family function and psychosocial adjustment	105
(XXII)	Distribution of the chronically ill children according to their maternal depression and psychosocial adjustment.	108
(XXIII)	Distribution of the chronically ill children according to the age onset of disease and psychosocial adjustment.	108
(XXIV)	Distribution of the chronically ill children according to the duration of the disease and psychosocial adjustment.	111
