Abstract

Cairo University
Faculty of Veterinary Medicine
Department of Microbiology
Bacteriology, Mycology and Immunology

Name: Seham Zaher Bottros

Nationality: Egyptian

B. V. Sc., Fac. Vet. Medicine Assiut University (1993)

M. V. Sc., Fac. Vet. Medicine Beni-suef University (2008)

For the Degree of Ph. D. in Veterinary Medical Sciences

Specialty: Microbiology (Bacteriology – Immunology - Mycology)

Under the supervision of

Prof. Dr. Wagih A. Gad El-Said

Professor of Microbiology

Fac. Vet. Med., Cairo University (Supervisor)

Prof. Dr. Sabry D. Morgan

Prof. of Milk Hygiene and Control

Faculty of Veterinary Medicine

Cairo University

Prof. Dr. Mohamed M. Mohamed El-Garhy

Prof. Chief Researcher

Animal Reproduction Research Institute

(2017)

Title of thesis:

Probiotics and bacteriological aspect of bovine genital tract

The recent increase in the number and severity of cases of bovine genital disorders has prompted in the use of probiotics for the prevention and control of this disease. A systemic review was performed to assess the effectiveness of probiotic therapy.

Data was extracted on the number of cases in 2 farms to receive probiotic. The study was applied on two groups, treated group (no.=103) and control group (no.=10). A total of one hundred and three cows and buffaloes with endometritis or cervicitis or vaginitis were supplied with antibiotic-free ration before the beginning of the experiment.

Out of 103 examined female animals “cows and buffaloes”, 173 bacterial isolates were secured include (103/173) Gram-positive micro-organisms [68 isolates *Staphylococcus* spp. and 35 isolates *Streptococcus* spp.] in addition to 70 isolates were Gram-negative bacilli identified as *Escherichia coli*.

Isolates were characterized and identified using the most important conventional biochemical tests as catalase test, coagulase test, nitrate reduction

test, urea hydrolysis, oxidase test, gelatin liquefaction test, sugar fermentation test in addition to IMVIC test and Triple sugar iron.

Experimental oral administration of probiotic bacteria *Lactobacillus acidophilus* to the treated group were performed after the first day of genital swabbing, in a dose of 20g before meal per day per animal divided on two meals while the control group was fed their diet only.

Oral administration of a probiotic preparation was shown to be effective in improving bovine endometritis; cervicitis and vaginitis in addition to enhance reproductive performance and fertility.

The choice of probiotic bacteria; optimal dose and timing of administration have yet to be determined.

Key words: genital disorders, Probiotics, *Staphylococcus aureus*, *Streptococcus* spp., *E. coli*, *Lactobacillus acidophilus*

Dedication

To My family

Acknowledgment

Acknowledgment

Firstly, my deepest prayerful thanks to "God" who gives me everything I have.

*All words are unable to express my cordial thanks, appreciation and deep gratitude for **Professor Dr. Wagih A. Gad El-Said**. Professor of Microbiology, Department of Microbiology, Faculty of Veterinary Medicine Cairo University, for his valuable supervision, ideal guidance and encouragement through this work. He gave me the best example of what a university professor should be.*

*It is pleasure to record all meaning of appreciation to **Prof. Dr. Sabry D. Morgan**, Professor of milk Hygiene and control, Department of Food Hygiene and control, Faculty of Veterinary Medicine Cairo University, who offered me a lot of his time and devoted his experience to provide me with the best possible piece of advice and guidance supervision to complete this work.*

*I wish to express my sincere gratitude and sincere thanks to **Prof. Dr. Mohamed Mostafa Mohamed El-Garhy**, Prof. chief Researcher, Animal Reproduction Research Institute for his kind supervision, continuous encouragement and fatherhood treatment and also for his extensive help to supply me many facilities and articles needed to accomplish this work.*

*I wish to express gratitude to **Prof. Dr. Ibrahim Gad** head of the Reproductive Disease Dept. Al-haram Reproductive Disease Institute for his valuable cooperation during the field and bacteriological study, identification of the detected organisms and revising manuscript for publication.*

Also, appreciations are specified to all the staff member of Al-haram Reproductive Disease Institute for their great help and support during the practical work of this thesis for their cooperation, valuable help and assistance during the course of this work.

Appendices

List of Contents

Subject	Page no.
1. Introduction.....	(1)
2. Review of Literature.....	(5)
2.1. Probiotic.....	(5)
2.1.1. Definition and Historical view.....	(5)
2.1.2. Microorganisms used as probiotics.....	(15)
2.1.3. Antimicrobial activity of probiotic against pathogenic agent.....	(22)
2.1.4. Administration and dose of probiotics.....	(30)
2.1.5. Role of probiotics in improving immune function and preventing infection.....	(34)
2.1.6. Potential benefits of probiotics.....	(47)
2.2. Bovine genital disorders.....	(52)
2.2.1. Definition of genital disorders.....	(52)
2.2.2. Etiology of bovine genital disorders (endometritis, cervicitis and vaginitis).....	(57)
2.2.2.1. Predisposing factors.....	(57)
2.2.2.2. Bacteria of uterine and cervico-vaginal mucus in bovines with genital disorders.....	(63)
2.2.3. Prevalence and risk factor of genital disorders in bovines.....	(78)
3. MATERIALS & METHODS.....	(94)
3.1. Materials.....	(94)
3.1.1. Farms and animal conditions.....	(94)
3.1.2. Animals.....	(97)
3.1.2.1. Experimental tested group (Samples used for bacteriological examination).....	(97)
3.1.2.2. Control group.....	(97)
3.1.3. Culture media and constituents.....	(97)
3.1.4. Stains.....	(100)
3.1.5. Media used for bacteriological examination (isolation and identification).....	(100)
3.1.5.1. Media used for isolation and preservation of microorganisms.....	(100)
3.1.5.2. Media used for biochemical identification of the isolates	(103)
3.1.6. Biological Materials.....	(108)
3.1.7. Reagents and solutions used in biochemical tests.....	(108)
3.1.8. Normal physiological saline 0.85%.....	(110)
3.1.9. Bacterial strains.....	(110)
3.2. Methods.....	(111)
3.2.1. Clinical examination.....	(111)
3.2.2. Collection of female genital mucous swabs.....	(112)
3.2.3. Bacteriological examination.....	(113)
3.2.3.1. Cultivation and isolation of different causative microorganisms.....	(113)
3.2.3.2. Morphological examination of the isolated bacteria	(114)
