Acknowledgement

Thanks first and last to God as we owe him for his great care, support and guidance in every step in our life.

I would like to express my sincere gratitude to my dear Professor Dr. Jannette Boushra Hanna, Professor of Radiodiagnosis, Faculty of Medicine, Ain Shams University for her moral support and valuable supervision throughout this work.

Special thanks are due to Dr. Azza Abdel Ghafar Boraei, Assistant Professor of Radiodiagnosis, Faculty of Medicine, Ain Shams University for her gentle, kind constant guide and her tremendous help and support.

Abeer

The first part of the paper discusses the importance of understanding the local context in which a project is implemented. This includes a thorough analysis of the social, cultural, and economic factors that may influence the success or failure of the intervention. It is essential to engage with the community from the outset, ensuring that their voices are heard and their needs are addressed.

The second part of the paper explores the challenges faced by researchers and practitioners in the field. These challenges often stem from limited resources, lack of infrastructure, and complex political environments. Despite these obstacles, it is crucial to maintain a commitment to ethical standards and to strive for transparency and accountability in all aspects of the work.

The third part of the paper presents a series of case studies that illustrate the application of the principles discussed in the previous sections. These examples demonstrate how a deep understanding of the local context can lead to more effective and sustainable outcomes. They also highlight the importance of collaboration and partnership between different stakeholders in the process.

In conclusion, the paper emphasizes the need for a holistic and context-specific approach to development work. By taking the time to understand the unique challenges and opportunities of each community, we can design interventions that are more likely to succeed and have a lasting impact. The journey is often long and difficult, but the potential for positive change is immense.

CONTENTS

	<u>Page</u>
Introduction and Aim of the Work	1
Radiological and Imaging Anatomy of the Mandible.	2
Pathological Causes of Mandibular Lesions	21
Radiological and Imaging Techniques of the Mandible	38
Radiological and Imaging Manifestations of Mandibular Lesions	53
Summary and Conclusion	97
References	99
Arabic Summary	--

LIST OF ABBREVIATIONS

- CT Computed Tomography
- MRI Magnetic Resonance Imaging
- TMJ Temporomandibular Joint
- U/S Ultrasound
- OKC Odontogenic keratocyst .

LIST OF FIGURES

	<u>PAGE</u>
1. Normal anatomy of the mandible and muscle attachment	7
2. Mandibular symphysis in a new born infant	10
3. Genial tubercles cross-sectional mandibular occlusal view.....	11
4. Mental foramen.....	12
5. Mandibular canal	13
6. Mylohyoid ridge.....	14
7. External oblique ridge	15
8. Coronoid process of the mandible.....	16
9. Normal axial CT scan of the TMJ	17
10. Normal axial CT scan of the mandible	18
11. Normal MRI of TMJ.....	20
12. Paralleling technique of mandibular canine projection	39
13. Cross-sectional mandibular occlusal projection	41
14. Patient positioning of a waters' projection of the skull.....	42
15. Patient positioning of a submentovertex projection of the skull	43
16. Patient positioning for an oblique lateral projection of the mandibular body	44
17. Panoramic machine.....	45
18. Normal panoramic radiography.....	47
19. Linear and spiral tomogram of the TMJ.....	48
