# FUNCTONAL IMPORTANCE OF LONG AXIS DYNAMICS OF THE HUMAN LEFT VENTRICLE AND ITS APPLICATIONS IN DILATED CARDIOMYOPATHY

**Thesis**

**Submitted for the Partial Fulfillment of Master Degree in**

**Cardiology**

**Presented by**

*Zakria Leon Kerollos*

(M.B.B. Ch.)

**Under The Supervision of**

***Prof. Dr. Nagwa El-Mahallawy***

Professor of Cardiology,

Faculty of Medicine, Ain Shams University

***Dr. Mohsen Fahmy***

Assistant Professor of Cardiology,

Faculty of Medicine, Ain Shams University

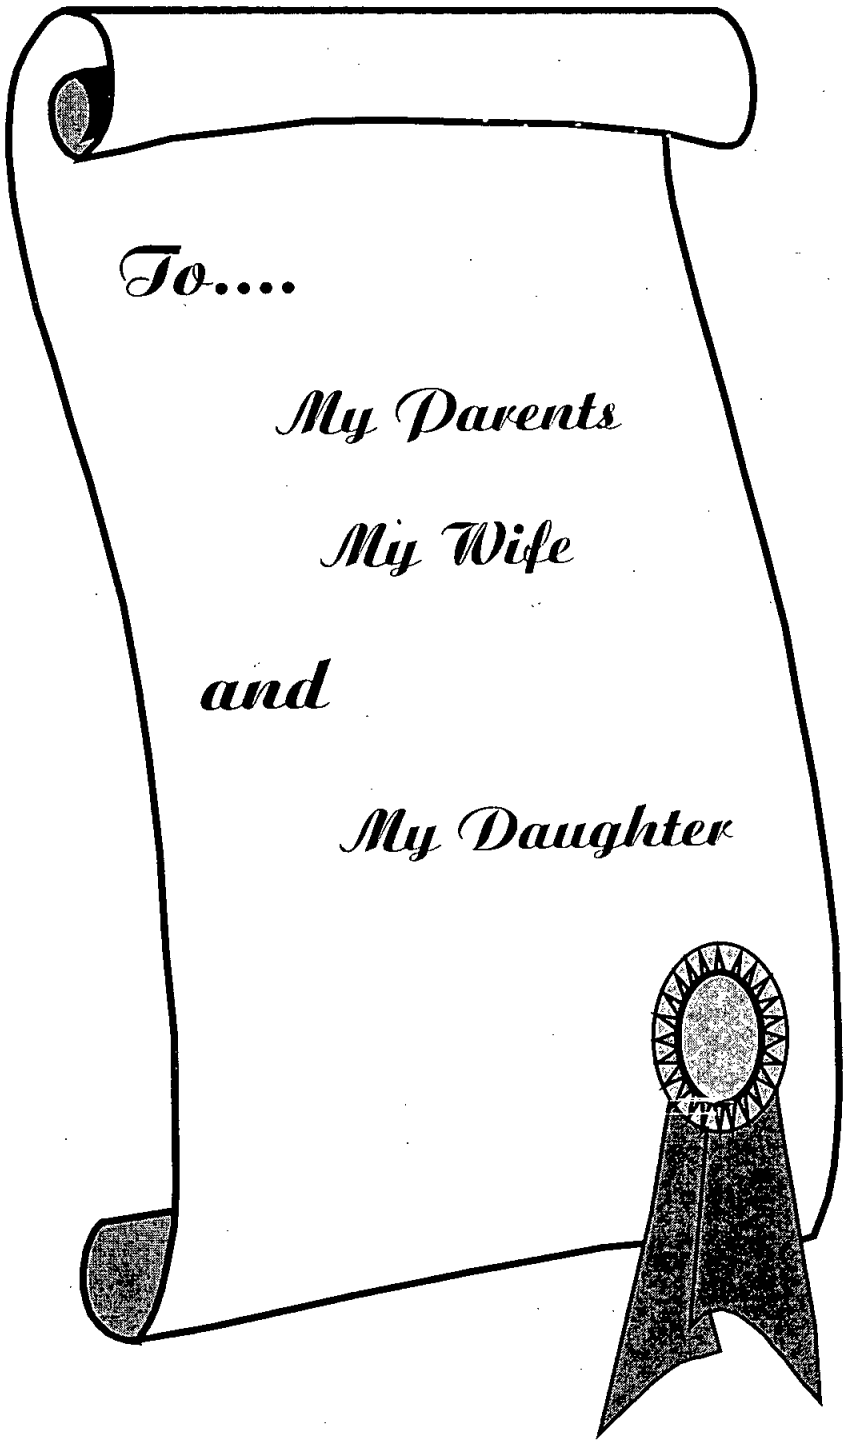
***Dr. Nabil Farag***

Assistant Prof. of Cardiology,

Faculty of Medicine,

Ain Shams University

**Faculty of Medicine**
**Ain Shams University**
**2002**



To....
My Parents
My Wife
and
My Daughter

# Acknowledgement

*First and foremost, thanks to* ***God*** *for giving me the strength and persistence to overcome every obstacle I faced to carry out this work.*

*Special thanks are due to Prof. Dr. Nagwa El-Mahallawy, Professor of Cardiology, Faculty of Medicine, Ain Shams University, for her generous encouragement, help and over all her moral support and kindness that gave me and this thesis a left to the scope of light. It was a real pleasure and great honor to work under her supervision.*

*My thanks to Dr. Mohsen Fahmy, Assistant Professor of Cardiology, Faculty of Medicine, Ain Shams University, for his guidance and supervision.*

*Special thanks to Dr. Nabil Farag, Assistant Professor of Cardiology, Faculty of Medicine, Ain Shams University, for his guidance and supervision.*

I am also offering my warmest thanks to **Dr. Hany Yonan,** Specialist of Cardiology, for his help specially in manual work, advises and continuous support.

*Finally, I am greatly indebted to my patients without whom this work would not come to light.*

# CONTENTS

| | Page |
|---|---|
| • Introduction and Aim of the Work ..... | 1 |
| • Review of Literature ..... | 3 |
| • Patients and Methods ..... | 41 |
| • Results ..... | 50 |
| • Discussion ..... | 82 |
| • Summary ..... | 89 |
| • Conclusion ..... | 92 |
| • Recommendation ..... | 93 |
| • References ..... | 94 |
| • Arabic Summary. | |

# LIST OF FIGURES

| Figure No. | | Page |
|---|---|---|
| 1 | Apical four-chamber view from which LV volume has been calculated using Simpson's rule ..... | 13 |
| 1a | Cannulation configuration for the thoracic ventricular assist device ..... | 32 |
| 2 | Diagram showing dissection in a normal left ventricular myocardium with the longitudinal fibres running between the apex and mitral ring and occupying the subendocardial and subepicardial layers ..... | 36 |
| 3 | Normal long axis M-mode of the left site of the left ventricular free wall with a superimposed ECG and phonocardiogram. Vertical line represents A2, aortic valve closure sound ..... | 40 |
| 4 | Schematic apical four chamber cross sectional view showing the M-mode cursor positioned through the posterior aspect of the mitral ring. The cursor angulation was altered slightly to obtain M-modes through the left ventricular apex ..... | 42 |
| 5 | M-mode echocardiograms of the mitral ring and left ventricular apex in a healthy control. The total amplitude of apical motion was less than 1 mm, indicating that changes in the position of the mitral ring reflect changes in left ventricular long axis dimension ..... | 43 |

# LIST OF FIGURES (Cont.)

| Figure No. | | Page |
|---|---|---|
| 6 | Recording the atrioventricular plane by two dimensionally guided M-mode guided by the cross sectional four chamber view, the cursor is placed at the lateral region of the atrioventricular plane perpendicular to the direction of movement (left), thus allowing a M-mode recording of the displacement (right) ..... | 43 |
| 7 | Minor (a) and long (b) axis echocardiograms of a control showing the earlier onset of long axis shortening and normal posterior wall thickening. Changes in long and minor axes were synchronous at end ejection and in early diastole. The Q-wave and the vertical lines indicate the onset of fibre shortening ..... | 45 |
| 8 | Time interval from the Q-wave to the onset of minor axis shortening in millisecond ..... | 46 |
| 9 | Time interval from the Q-wave to the long axis shortening ms ..... | 46 |
| 10 | Time interval from the Q-wave to the minimum minor axis shortening ms ..... | 46 |
| 11 | Time interval from the Q-wave to the minimum long axis shortening ms ..... | 47 |
| 12 | The extent of minor axis change during the initial 100 ms from the Q-wave (cm) ..... | 47 |
