Comparison Between the Effects of Stem Cells and Lepidium Sativum on the Healing of Extraction Socket in Albino Rats (Histological and Immunohistochemical Study)

Thesis Submitted to Faculty of Dentistry – Ain Shams University
in Partial Fulfillment of the Requirements
for Doctorate Degree in Oral Biology

By

Zeinab Mahmoud Ahmad Abulwafa

B.D.S Cairo University (2002)
M.D.S Al-Azhar University (2012)

Under the Supervision of

Prof. Dr. Medhat Ahmed El-Zainy

Professor in Oral Biology Department
Faculty of Dentistry - Ain Shams University

Co-supervisor

Dr. Khaled El-Sayed Nour El-Haddad

Lecturer in Oral Biology Department
Faculty of Dentistry - Ain Shams University

Faculty of Dentistry
Ain Shams University
2018

بسم الله الرحمن الرحيم

وَقَالُواْ ٱلْحَمْدُ لِلَّهِ
ٱلَّذِى هَدَىٰنَا لِهَٰذَا
وَمَا كُنَّا لِنَهْتَدِىَ لَوْلَآ أَنْ هَدَىٰنَا ٱللَّهُ ۖ

صدق الله العظيم

الأعراف (٤٣)

Acknowledgement

First and foremost, all praise and thanks to Allah for His grace and giving's. From the grace of Allah up on me, guided and enabled me by his mercy to fulfill this thesis, which I hope to be beneficial for people.

With all love and respect, I would like to express my sincere gratitude and appreciation to the chief supervisor, **Prof. Dr. Medhat Ahmed El-Zainy,** Professor of Oral Biology, Faculty of Dentistry-Ain Shams University, for his valuable guidance and kind support. Not only did he suggest the main theme of this study, but also, he provided me with continuous encouragement throughout the whole study. I would like to take this opportunity to say that his supervision on my thesis was a great honor for me.

All sincere thanks to the talented co-supervisor **Dr. Khaled El-Sayed Nour El-Haddad**, Lecturer of Oral Biology, Faculty of Dentistry-Ain Shams University, for his great patience and constant provocation.

Finally, special thanks to all staff members of the Oral Biology Department for their cooperation, they contained me as if I were one of them.

Dedication

To my great teacher and messenger, prophet Mohammed (prayers of Allah and peace be upon him), who taught us the purpose of life

To my great parents, who did not stop their sacrifices for me throughout my life, may God help me for getting their satisfaction

My loving husband, who always standing behind me sharing life troubles

To my supporting sister and brothers, who are very special

To my beloved children; hoping that this work may

answer their continuous inquiries:

"Mama, when would you finish studying?

List of Figures

Fig. No	Title	Page
1	Photographs showing injection of anesthesia (a) and procedure of tooth extraction in the rat (b).	37
2	A photomicrograph showing granulation tissue and bone spicules connected to the original bone in subgroup 1A (H&E original magnification x40).	46
3	A magnification of fig 2, showing granulation tissue with blood vessels and bone spicules (H&E original magnification x100)	46
4	A photomicrograph showing osteocytes in lacunae, with eccentric small nuclei or with larger central nuclei, osteoblasts with different outlines, spindle fibroblasts, inflammatory cells and collagen fibrils in subgroup 1A (H&E original magnification x400).	47
5	A photomicrograph showing interconnected woven bone with marrow cavities with wide central region of the socket with less trabeculae in the socket of subgroup 1B (H&E original magnification x40).	47
6	Higher magnification of fig.5 showing bone trabeculae and marrow cavities with no evidence of compact bone (H&E original magnification x100).	48
7	A photomicrograph showing bone trabeculae with some empty lacunae, marrow cavities with darkly stained cells and occasional ossifications in subgroup 1B (H&E original magnification x200).	48
8	A photomicrograph showing bone trabeculae, marrow cavities, osteoblasts, scattered osteocytes, Haversian canal surrounded by osteocytes and Volkmann's canal in subgroup 1C (H&E original magnification x200).	49

9	A photomicrograph showing scattered bone trabeculae, blood vessels in the granulation tissue in the socket of subgroup 2A (H&E original magnification x100).	52
10	Higher magnification of fig. 9 showing well developed endothelium, ill-defined endothelium and bone spicules with entrapped osteocytes (H&E original magnification x400).	52
11	A photomicrograph showing highly cellular granulation tissue (GT) with blood vessels and new bone formation in subgroup 2B (H&E original magnification x100).	53
12	A higher magnification of fig 11, showing osteon with Haversian canal and surrounding osteocytes and blood vessels and the fibrous connective tissue with observable collagen fibrils (H & E original magnification x 100).	53
13	A photomicrograph showing new bone enclosing osteocytes and bordered by osteoblasts in the socket of subgroup 2B (H&E original magnification x400).	54
14	A photomicrograph showing various sizes of blood vessels, regularly oriented collagen fibrils associated with fibroblasts and developing osteoid in the extraction socket of subgroup 2B (H&E original magnification x400).	54
15	A photomicrograph showing that the socket almost filled with mature bone, Haversian canals, Volkmann's canal and widely separated marrow cavities in subgroup 2C (H&E original magnification x100).	55
16	A photomicrograph showing area of compact bone with Haversian canals, surrounded by circumferentially oriented osteocytes in subgroup 2C (H&E original magnification x400).	55

17	A photomicrograph showing patchy distribution of newly formed bone within the granulation tissue in the socket of subgroup 3A (H&E original magnification x100).	58
18	A photomicrograph showing trabecular architecture occupied extensive areas of the field in the socket of subgroup 3B (H&E original magnification x100).	58
19	Higher magnification of fig 18 showing relatively dense trabeculae and Haversian systems (H&E original magnification x200).	59
20	Higher magnification of fig 19 showing marrow cavities displayed scattered calcified masses. Darkly stained osteocytes (H&E original magnification x400).	59
21	A photomicrograph of the socket showing Haversian canals lined by osteoblasts, bone trabeculae containing osteocytes and marrow cavities lined by active osteoblasts in the socket of subgroup 3C (H&E original magnification x400).	60
22	A photomicrograph showing blue stained areas of randomly arranged immature collagen fibrils and small amounts of newly formed bone segments in the extraction socket of subgroup 1A (Trichrome stain x100).	63
23	A photomicrograph showing randomly arranged immature collagen fibrils and fewer mature fibrils in the socket of subgroup 1A (Trichrome stain x400).	63
24	A photomicrograph showing blue stained osteoid in the extraction socket of subgroup 1A (Trichrome stain x400).	64
25	A photomicrograph showing immature central zone of the socket surrounded by areas of maturation in the extraction socket of subgroup 1B (Trichrome stain x100).	64

26	A photomicrograph showing densely packed well-organized bluish stained areas of immature collagen fibrils and spots of maturation in the developed bone in the extraction socket of subgroup 1B (Trichrome stain x200).	65
27	A photomicrograph showing few reddish mature collagen fibrils adjacent to bluish immature fibrils in the socket of subgroup 1C (Trichrome stain x100).	65
28	A photomicrograph showing highly cellular granulation tissue with newly formed hyaline matrix and newly deposited bone fragment in the extraction socket of subgroup 2A (Trichrome stain x400).	68
29	A photomicrograph showing blue color stained immature collagen fibrils, developing bone masses with growing margins and few mature fibrils in the extraction socket of subgroup 2A (Trichrome stain x400).	68
30	A photomicrograph showing new bone islands separated by cellular granulation tissue containing mixture of new and mature collagen which were organized in the extraction socket of subgroup 2B (Trichrome stain x200).	69
31	A photomicrograph showing immature bone bordered with active osteoblasts in the extraction socket of subgroup 2B (Trichrome stain x400).	69
32	A photomicrograph showing dense extracellular matrix, abundant organized collagen concentration in the extraction socket of subgroup 2C (Trichrome stain x200).	70
33	A photomicrograph showing lamellar bone with areas of maturation in the extraction socket of subgroup 2C (Trichrome stain x400).	70

34	A photomicrograph showing blue immature newly formed bone with surrounded by collagenous connective tissue containing mature and immature collagen fibrils in the extraction socket of subgroup 3A (Trichrome stain x400).	72
35	A photomicrograph showing well-organized collagen fibrils in the immature region and mature region of the in the extraction socket of subgroup 3B (Trichrome stain x100).	72
36	A photomicrograph showing well-organized bone mass with well-arranged osteocytes in the extraction socket of subgroup 3C (Trichrome stain x200).	73
37	A photomicrograph showing faint reddish regions of initiation of bone matrix maturation in the extraction socket of subgroup 3C (Trichrome stain x400).	73
38	A Photomicrograph showing immunopositive cytoplasmic reaction of osteoblasts of irregular outlines and osteocytes. Negative reaction is observed in the bone matrix and some flat osteoblasts, osteocytes and areas in granulation tissues in subgroup 1A (Anti-osteonectin original magnification x400).	76
39	A Photomicrograph showing more observable positive reaction in the cells of granulation tissue in subgroup 1B (Anti-osteonectin Original magnification x400).	76
40	A Photomicrograph showing more positive reaction intertrabecular granulation tissue in subgroup 1C (Anti-osteonectin Original magnification x200).	77
41	A photomicrograph showing many positive active osteoblasts and few positive recent osteocytes and cells of granulation tissue in the socket of subgroup 2A (Anti-osteonectin original magnification x400).	79
