Title of Thesis:

Enhancement of Grid Connected Variable Speed Direct-Drive PMSG-Based Wind Energy Conversion System (WECS) through integration of Flywheel Energy Storage System (FESS)

Key Words:

Wind Energy Conversion Systems, Flywheel Energy Storage Systems, Maximum Power Point Tracking, Active and Reactive Power Control, Low Voltage Ride-Through Capability

Summary:

This thesis presents a study of improving grid connected wind energy conversion systems through the integration with flywheel energy storage systems. The study has shown the effectiveness of flywheel system to control the grid active and reactive power simultaneously, while extracting the maximum power from the wind generator considering a variable wind speed profile. Also, the study has proved the ability of the flywheel system to enhance the low voltage ride-through capabilities of the wind generator. MATLAB / SIMULINK models have been conducted showing the different integration topologies between the wind and flywheel systems. Finally, the study presents recommendations for the convenient integration topology based on the performance required from the integrated system.

ACKNOWLEDGMENTS

First of all, I would like to thank Allah, the most gracious, the most merciful, for giving me the patience and guidance to complete this work.

I would like to express my thanks to my supervisor, **Prof. Dr. Amr Adly**, for his encouragement, helpful advice and the time he offered me during research period. His patience and kindness are greatly appreciated. I couldn't accomplish my present achievements without his support and motivation. I feel tremendously lucky to have had the opportunity to work with him.

I would like deeply to express my sincere thanks and heartiest gratitude to my supervisor, **Dr. Ahmed Huzayyin**, for his great faithful supervision, his guidance and encouragement during all stages of this research. His knowledge as well as his kind and friendly personality have been always inspirational to me. Without his constructive comments and insightful discussions, this dissertation would not have been possible.

I would like deeply to express my sincere thanks and heartiest gratitude to **Dr. Haitham Mahmoud Yassin**, and **Dr. Tamer Mamdoh** for their great support and cooperation.

Finally, I would like to express all of my sincere and appreciated thanks for **my parents, my sisters, and my friends** for their sincere support.

LIST OF SYMBOLS AND ABBREVIATIONS	v
List of Abbreviations	v
List of Symbols	viii
LIST OF FIGURES	xi
LIST OF TABLES	xiv
ABSTRACT	xv
CHAPTER ONE: INTRODUCTION	1
1.1 General Background	1
1.1.1 Overview on Various Technologies of Energy Storage Systems (ESS)	3
1.1.2 Applications of Energy Storage Systems in Electrical Networks with Renewable Generation.....	9
1.2 Problem Statement and Research Motivation.....	12
1.3 Thesis Objectives	13
1.4 Thesis Layout.....	14
CHAPTER TWO: LITERATURE REVIEW	17
2.1 Introduction.....	17
2.2 Optimum Operation of Grid Connected Wind Systems	17
2.2.1 Active Power Control	17
2.2.2 Reactive Power Control.....	19
2.2.3 Low Voltage Ride-Through Capability	19
2.3 General Review on Wind Energy Conversion Systems Configurations	21
2.3.1 Fixed Speed Wind Energy Conversion Systems	22
2.3.2 Limited Variable Speed Wind Energy Conversion Systems.....	22
2.3.3 Variable Speed Wind Energy Conversion Systems	23
2.3.3.1 Doubly-Fed Induction Generator Based Wind System	23
2.3.3.2 Permanent Magnet Synchronous Generator Based Wind System	24
2.4 Flywheel Energy Storage Systems.....	25

2.4.1 Theory of Operation	25
2.4.2 Flywheel Energy Storage Systems Configuration.....	26
2.4.2.1 Flywheel Disk Design	27
2.4.2.2 Electrical Motor / Generator.....	28
2.4.2.3 Bi-Directional Power Electronic Converter	29
2.4.2.4 Bearings and Enclosure	29
2.5 Merits of Wind and Flywheel Energy Systems Integration.....	31
2.6 Brief Review on Both systems Integration from Literature.....	31
CHAPTER THREE: MODELING OF PMSG VARIABLE SPEED WIND SYSTEM INTEGRATED WITH FLYWHEEL SYSTEM	33
3.1 Introduction.....	33
3.2 Direct-Drive PMSG Wind System Model	33
3.2.1 Aerodynamic Model.....	34
3.2.2 Two Mass Drive Train Model	36
3.2.3 Permanent Magnet Synchronous Generator Model	37
3.2.4 Bi-directional Power Electronic Converter Model.....	39
3.2.4.1 Machine Side Converter Model.....	40
3.2.4.2 Grid Side Converter Model	42
3.2.4.3 DC LINK Model.....	42
3.3 Grid Model.....	42
3.4 Flywheel Energy Storage System Model.....	44
3.5 Proposed Topologies of System Integration	45
3.5.1 First Topology (STATCOM)	45
3.5.2 Second Topology (ON DC LINK)	46
CHAPTER FOUR: CONTROL PHILOSOPHY OF WECS-FESS INTEGRATED SYSTEM IN THE TWO PROPOSED TOPOLOGIES	49
4.1 Introduction.....	49
4.2 Field Oriented Control Basics.....	49
4.3 Coordinate Transformation and Space Vector Modulation	50
4.4 Maximum Power Point Tracking Strategies	56
4.5 Low Voltage Ride-Through Strategies	60

4.6 Control Structure of the system power electronic converters	64
4.6.1 Grid Side Converter Control	65
4.6.2 Machine Side Converter Control.....	66
4.7 Control Strategy of the Proposed First Topology “STATCOM”	70
4.8 Control Strategy of the Proposed Second Topology “ON DC LINK”	75
CHAPTER FIVE: DEVELOPED SIMULINK MODELS, SIMULATION SCENARIO, AND RESULTS DISCUSSION	79
5.1 Developed SIMULINK Model	79
5.2 SIMULINK Model Validation.....	83
5.3 Simulation Scenario	84
5.4 Results and Discussion	86
CHAPTER SIX: SUMMARY, CONCLUSIONS AND FUTURE WORK.....	95
6.1 Summary	95
6.2 Conclusions.....	95
6.3 Recommendations for Future Work.....	98
REFERENCES.....	99
APPENDIX A: DATA OF WIND AND FLYWHEEL ENERGY SYSTEMS USED IN MATLAB/SIMULINK MODEL	103
APPENDIX B: DESIGN OF PI CONTROLLERS OF THE MACHINE AND GRID SIDE CONVERTERS.....	104

LIST OF SYMBOLS AND ABBREVIATIONS

- **List of Abbreviations**

APS	Active Power Stabilization
BESS	Battery Energy Storage System
CAES	Compressed Air Energy Storage
CPC-S	Conditioning Power Control System
DD-WECS	Direct Drive Wind Energy Conversion System
DFIG	Doubly Fed Induction Generator
DOD	Depth of Discharge
DTC	Direct Torque Control
DVR	Dynamic Voltage Restorer
EEHC	Egyptian Electrical Holding Company
ESS	Energy Storage System
FACTS	Flexible AC Transmission Systems
FBESS	Flow Battery Energy Storage System
FC	Frequency Control
FESS	Flywheel Energy Storage System
FOC	Field Oriented Control
FRT	Fault Ride-Through
GSC	Grid Side Converter
HCS	Hill Climb Searching
IDFOC	Indirect Field Oriented Control
IM	Induction Machine
IPP	Independent Power Producer

LVRT	Low Voltage Ride-Through
MMC	Modular Multilevel Converters
MPPT	Maximum Power Point Tracking
MSC	Machine Side Converter
MTPA	Maximum Torque per Ampere
NREA	New and Renewable Energy Authority
OTC	Optimal Torque Control
PCC	Point of Common Coupling
PHS	Pumped Hydro Storage
PLL	Phase Locked Loop
PMSG	Permanent Magnet Synchronous Generator
PMSM	Permanent Magnet Synchronous Machine
PPA	Power Purchase Agreement
PSF	Power Signal Feedback
PSO	Power System Operator
PWM	Pulse Width Modulation
RSC	Rotor Side Converter
SCE	Supreme Council for Energy
SCSS	Super Capacitor Energy Storage System
SCIG	Squirrel Cage Induction Generator
SDBR	Series Dynamic Braking Resistor
SMES	Super Magnetic Energy Storage System
SOC	State of Charge
SPWM	Sinusoidal Pulse Width Modulation
STATCOM	Static Compensator
SVC	Static VAR Compensator
SVM	Space Vector Modulation

TCSR	Thyristor Controlled Series Reactor
TSO	Transmission System Operator
TSR	Tip Speed Ratio
TSRC	Tip Speed Ratio Control
UPF	Unity Power Factor
VAR	Volt Ampere Reactive
VC	Voltage Control
VRM	Variable Reluctance Machine
VSC	Voltage Source Converter
VSWG	Variable Speed Wind Generator
WPP	Wind Power Plant
WRIG	Wound Rotor Induction Generator
WWEA	World Wind Energy Association

• List of Symbols

A	: The area covered by rotor blades, m^2
C	: The DC link capacitor, F
C_p	: The power conversion coefficient
D_f	: The Damping Coefficient of the Flywheel Rotor, N.m/rad/sec
D_r	: The damping coefficient of the generator, Nm/(rad/sec)
D_t	: The damping coefficient of the wind turbine rotor, Nm/(rad/sec)
E_C	: The Energy Stored in capacitor, Joules
E_f	: The Energy Stored in flywheel, Joules
E_L	: The Energy Stored in inductor, Joules
e_m	: The Energy stored per unit mass, MJ / kg
E_s	: The Grid voltage amplitude, V
e_v	: The Energy stored per unit volume, MJ / m^3
i_{dg}	: The d -axis component of the GSC current, A
i_{ds}	: The d -axis component of the stator current, A
i_{qg}	: The q -axis component of the GSC current, A
i_{qs}	: The q -axis component of the stator current, A
J_f	: The flywheel inertia, kg/m^2
J_r	: The generator inertia, kg/m^2
J_t	: The wind turbine inertia, kg/m^2
k	: The shaft stiffness, N/rad
K	: The Flywheel Shape Factor
L_{df}	: The d -axis component of the filter inductance, H
L_{ds}	: The d -axis component of the stator inductance, H
L_f	: The filter inductance, H
L_{qf}	: The q -axis component of the filter inductance, H

L_{qs}	: The q -axis component of the stator inductance, H
L_s	: The stator inductance, H
p	: The pair poles
P_g	: The grid active power, W
P_s	: The PMSG active power, W
P_t	: The extracted mechanical power from the wind, W
Q_g	: The reactive power output to the grid, VAR
Q_s	: The PMSG reactive power, VAR
R	: The radius of the wind turbine rotor, m
R_f	: The filter resistance, Ω
R_s	: The stator resistance, Ω
T_e	: The generator electromagnetic torque torque, Nm
T_{efw}	: The electromagnetic torque of flywheel generator rotor , N.m
T_t	: The wind turbine torque, Nm
V_{dc}	: The dc-link voltage, V
V_{dg}	: The d -axis component of the GSC output voltage, V
V_{ds}	: The d -axis component of the terminal stator voltage, V
V_{qg}	: The q -axis component of the GSC output voltage, V
V_{qs}	: The q -axis component of the terminal stator voltage, V
V_{wind}	: The wind speed, m/s
β	: The pitch angle of the rotor blades, deg
θ_g	: The angular position of the grid voltage, rad
θ_r	: The rotational angle of the generator rotor, rad
θ_t	: The rotational angle of the wind turbine rotor, rad

λ	: The tip speed ratio
ρ	: The air density, Kg/m ³
ρ_f	: The Flywheel Material Density, kg / m ³
σ	: The Material Tensile Strength, MPa
ψ_{ds}	: The d -axis component of the stator flux linkage, Wb
ψ_f	: The permanent magnet flux, Wb
ψ_{qs}	: The q -axis component of the stator flux linkage, Wb
ω	: The angular frequency of the grid voltage, rad/sec
ω_{fw}	: The angular frequency of the grid voltage, rad/sec
ω_r	: The rotational angular speed of the generator, rad/sec
ω_t	: The angular speed of wind turbine rotor, rad/sec
