Water Purification from Organic Waste Using Nanomodified Natural Polymers

A Thesis
Submitted for Faculty of Science
In partial fulfillment for requirements
of the degree of Master of Science in Biophysics

By

Ahmed Mohammed Bayoumy Mohammed
B.Sc. in Biophysics (2012)
Faculty of Science - Ain Shams University

Supervised by

Prof. Dr. El-Sayed Mahmoud El-Sayed
Prof. of Biophysics, Faculty of Science, Ain Shams University

Prof. Dr. Medhat Ahmed Ibrahim
Prof. of Spectroscopy, Spectroscopy Department, Physics Division,
National Research Center (NRC)

Dr. Amina Yousef Omar
Lecturer of Biophysics, Faculty of Science, Ain Shams University

(2018)

جامعة عين شمس

تنقية الماء من الملوثات العضوية باستخدام بوليمرات طبيعية معدلة بجزيئات النانو

رسالة
مقدمة لكلية العلوم
كجزء مكمل لمتطلبات
الحصول على درجة الماجستير فى الفيزياء الحيوية

مقدمة من

أحمد محمد بيومى محمد
الحاصل على بكالوريوس العلوم فى الفيزياء الحيوية (2012)
كلية العلوم – جامعة عين شمس

تحت اشراف

أ.د. السيد محمود السيد
أستاذ الفيزياء الحيوية بقسم الفيزياء - كلية العلوم – جامعة عين شمس

أ.د. مدحت أحمد ابراهيم
أستاذ الاطياف بقسم الطيف - شعبة الفيزياء – المركز القومى للبحوث

د. أمينة يوسف عمر
مدرس الفيزياء الحيوية بقسم الفيزياء - كلية العلوم – جامعة عين شمس

رسالة ماجستير فى الفيزياء الحيوية

اسم الطالب: **أحمد محمد بيومى محمد**

عنوان الرسالة: تنقية الماء من الملوثات العضوية باستخدام بوليمرات طبيعية معدلة بجزيئات النانو.

اسم الدرجة: الماجستير فى العلوم (الفيزياء الحيوية)

المشرفون	التوقيع
أ.د. السيد محمود السيد أستاذ الفيزياء الحيوية – كلية العلوم - جامعة عين شمس	
أ.د. مدحت أحمد ابراهيم أستاذ الطيف – قسم الطيف- المركز القومى للبحوث	
د. أمينة يوسف عمر مدرس الفيزياء الحيوية – كلية العلوم - جامعة عين شمس	

لجنة الحكم:

أ.د. السيد محمود السيد
أستاذ الفيزياء الحيوية – كلية العلوم - جامعة عين شمس

أ.د. أوزيريس ونيس جرجس
أستاذ الفيزياء الحيوية – كلية العلوم - جامعة القاهرة

أ.د. عايدة عبد الكريم سلامة
أستاذ الفيزياء الحيوية – كلية العلوم - جامعة الأزهر (بنات)

List of Figures

Figure	Caption	Page
2.1	Schematic representation illustrates the relationships between different quantum mechanical calculation methods ***(Ramachandran et al. 2008)***.	**44**
2.2	Chemical structure of ibuprofen (IBP) compound ***(from Georgaki et al., 2014)***.	**61**
2.3	Routes of emerging PPCPs into various types of water ***(from Amouzgar and Salamatinia 2015, Heberer 2002)***	**65**
2.4	Events of producing free radicals during TiO_2 photocatalytic oxidation process ***(from Georgaki et al., 2014)***	**82**
2.5	Chemical structure of a. chitin and b. chitosan biopolymers ***(from Tanase et al., 2014)***	**97**
2.6	Structure of a. glucosamine (monomer of chitosan) and b. glucose (monomer of cellulose). ***(From Pillai et al., 2009).***	**99**
2.7	Molecular vibrational modes; stretching (symmetric and asymmetric) and bending modes including in phase bending (scissoring and rocking) and out of phase bending (twisting and wagging).	**117**
4.1	Molecular model molecules of a. chitosan monomer (Cs), b. chitosan four units (4Cs) and c. ibuprofen	**134**

	molecule (IBP) optimized at both PM6 semiemprical calculation and DFT at B3LYP/6-311G(d,p). [C in grey, H in white grey, O in red and N in blue]	
4.2	The five interaction probabilities of Cs and IBP in the water absence named a. first (P_1), b. second (P_2), c. third (P_3), d. fourth (P_4) and e. fifth (P_5) interaction possibilities optimized at both PM6 semiemprical method and DFT at B3LYP.	**138**
4.3	The five interaction probabilities of Cs and IBP in the water presence named a. first ($P`_1$), b. second ($P`_2$), c. third ($P`_3$), d. fourth ($P`_4$) and e. fifth ($P`_5$) interaction possibilities optimized at PM6 semiemprical method.	**141**
4.4	Calculated heat of formation (HF) for a. 4Cs, Cs and IBP, b. their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and c. their proposed interactions in the water presence denoted as $P`_1$, $P`_2$, $P`_3$, $P`_4$ and $P`_5$ calculated at PM6.	**155**
4.5	Calculated heat capacity (HC) for a. 4Cs, Cs and IBP, b. their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and c. their proposed interactions in the water presence denoted as $P`_1$, $P`_2$, $P`_3$, $P`_4$ and $P`_5$ calculated at PM6.	**156**
4.6	Calculated enthalpy (En) for a. 4Cs, Cs and IBP, b. their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and c. their proposed	**158**

	interactions in the water presence denoted as P`$_1$, P`$_2$, P`$_3$, P`$_4$ and P`$_5$ calculated at PM6.	
4.7	Calculated entropy (ET) for a. 4Cs, Cs and IBP, b. their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and c. their proposed interactions in the water presence denoted as P`$_1$, P`$_2$, P`$_3$, P`$_4$ and P`$_5$ calculated at PM6.	**160**
4.8	Calculated free energy (FE) for a. 4Cs, Cs and IBP, b. their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and c. their proposed interactions in the water presence denoted as P`$_1$, P`$_2$, P`$_3$, P`$_4$ and P`$_5$ calculated at PM6.	**162**
4.9	Calculated IR spectra for 4Cs, Cs and IBP, their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and also in the water presence that denoted as P`$_1$, P`$_2$, P`$_3$, P`$_4$ and P`$_5$ using PM6 semiemprical calculation.	**163**
4.10	The optimized interaction sites of interacting chitosan monomer (Cs) (at right) and ibuprofen (IBP) molecule (at left) for a. the OH…HO P_2 and b. the NH…HO P_4 probabilities.	**170**
4.11	Calculated IR spectra for 4Cs, Cs and IBP, their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 using B3LYP method.	**175**
4.12	a. FTIR spectra of 2% Cs microspheres (Cs exp.) versus the calculated IR spectra of 4Cs using	**179**

	B3LYP method (Cs theo.), b. FTIR spectra of ibuprofen powder (IBP exp.) versus the calculated IR spectra of IBP molecule using DFT at B3LYP method (IBP theo.).	
4.13	FTIR spectra of chitosan (Cs), silica and chitosansilica (Cs/Silica) microspheres.	**181**
4.14	SEM and EDX analyses of chitosan microspheres before sorbing ibuprofen (a) and after mixed with it for 24H (b).	**183**
4.15	SEM and EDX analyses of chitosansilica microspheres before sorbing ibuprofen (a) and after mixed with it for 24H (b).	**184**
4.16	FTIR spectra of Cs before sorbing IBP and Cs after mixing with it for 5min. (5m), 10min. (10m), 30min. (30m) , 60min. (60m), 90min. (90m) and 24hr (24H) at pH 5.0.	**189**
4.17	FTIR spectra of CS before sorbing IBP and CS after mixing with it for 5min. (5m), 10min. (10m), 30min. (30m) , 60min. (60m), 90min. (90m) and 24hr (24H) at pH 5.0.	**190**
4.18	FTIR spectra of Cs before sorbing IBP and Cs after mixing with it for 5min. (5m), 10min. (10m), 30min. (30m) , 60min. (60m), 90min. (90m) and 24hr (24H) at pH 10.0.	**191**

List of Tables

Table	Caption	Page
2.1	List of the common polysaccharides and their sources ***(obtained from Olatunji, 2015, Olatunji et al., 2014, Brostow, 2010, Abdelfadeel, 2012).***	**94**
3.1	Codes and composition of the prepared microsphere samples.	**127**
4.1	Calculated physical, electronic and QSAR properties of 4Cs, Cs and IBP, their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and also in the water presence that denoted as $P`_1$, $P`_2$, $P`_3$, $P`_4$ and $P`_5$ using PM6 semiemprical calculation.	**144**
4.2	Net atomic charges of the active sites of Cs and IBP, their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and also in the water presence that denoted as $P`_1$, $P`_2$, $P`_3$, $P`_4$ and $P`_5$ calculated at PM6 semiemprical level.	**149**
4.3	Calculated thermal properties for 4Cs, Cs and IBP, their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5 and also in the water presence that denoted as $P`_1$, $P`_2$, $P`_3$, $P`_4$ and $P`_5$ calculated at PM6 semiemprical level at 298 K.	**153**
4.4	Calculated physical and electronic properties of 4Cs, Cs and IBP and their proposed interactions in the	**166**

	water absence denoted as P_1, P_2, P_3, P_4 and P_5 calculated at B3LYP/6-311G(d,p) DFT level.	
4.5	Calculated geometrical parameters involving bond lengths (L) and bond angles (A) for Cs, IBP and their most probable interactions denoted as P_2 and P_4 calculated using DFT at B3LYP/6-311G(d,p).	**172**
4.6	Calculated entropy (S), heat capacity (CV) and thermal energy (E) for 4Cs, Cs and IBP and their proposed interactions in the water absence denoted as P_1, P_2, P_3, P_4 and P_5calculated using DFT at B3LYP/6-311G(d,p) at 298 K.	**174**
4.7	Elemental Percentage of pristine chitosan beads (Cs) and IBP sorbed chitosan beads obtained by EDX analysis.	**183**
4.8	Elemental Percentage of chitosansilica beads (CS) and IBP sorbed chitosansilica beads obtained by EDX analysis.	**184**
4.9	Swelling percentage (%S) of Cs and CS sample microspheres after 0.5hr, 1.0hr, 1.5hr and 24hr.	**186**
4.10	Uptake percentage % of IBP using Cs and CS beads after 5min., 10min., 30min., 60min., 90min. and 1440 min. (24H) at both pH 5.0 and pH 10.0 for Cs and pH 5.0 for CS.	**189**
