

**Influence of using zirconia primer on
some properties of two resin cements
bonded to zirconia**

Thesis

**Submitted to faculty of Dentistry
Ain-Shams University**

**In partial fulfillment of the requirements for the
Master degree in Dental Biomaterials**

By

Yasmin Ezz El Din Mahmoud

**B.D.S (Ain-Shams University, 2009)
Instructor of Dental Materials
Biomaterials Department
Faculty of Dentistry
Ain-Shams University**

**Biomaterials Department
Faculty of Dentistry
Ain-Shams University**

2018

Supervisors

Prof. Dr. Ghada Atef Alian

Professor of Dental Biomaterials
Biomaterials Department
Faculty of Dentistry
Ain-Shams University

Dr. Dalia Ibrahim Sherief

Lecturer of Dental Biomaterials
Biomaterials Department
Faculty of Dentistry
Ain-Shams University

Acknowledgment

*I would like to express my sincere respect and gratitude to **Prof.Dr. Ghada Atef Alian**, Professor of Dental Biomaterials, Faculty of Dentistry, Ain-Shams University, for her great support and generosity in guiding and teaching me. Deep thanks Dr. Ghada for your endless support and your valuable guidance. I am really proud to be your student.*

*I wish to faithfully express my deepest thanks and gratitude to **Dr.Dalia Ibrahim Sherief**, Lecturer of Dental Biomaterials, Faculty of Dentistry, Ain-Shams University, for her great efforts in guiding me and her continuous support throughout this work. Thanks Dr.Dalia for your guidance and for treating me as one of your family.*

My deepest thanks to all my professors and colleagues in the Biomaterials department for their continuous support and help throughout my work.

Dedication

I would like to dedicate this work to my beloved parents, they are the true reason behind any progress in my life.

*I would also like to thank my amazing husband **Mahmoud**, for his endless encouragement and support. Thanks for sharing me my life.*

*Last but not least, to my adorable kids **Jana** and **Seif El Din** who are the source of happiness in my life. God bless you.*

LIST OF CONTENTS

<i>List of contents</i>	I
<i>List of Tables</i>	IV
<i>List of figures</i>	V
<i>List of abbreviations</i>	IX
Introduction	1
Review of literature	3
1. Dental Zirconia.....	3
1.1. Historical background	3
1.2. Microstructure of zirconia	4
1.3. Types of zirconia	6
1.3.1. Depending on the microstructure	6
1.3.2. Depending on the type of stabilizer	7
1.4. Properties of Y-TZP	9
1.4.1. Physical properties.....	9
1.4.2. Mechanical properties	10
1.4.2.1. Flexural strength.....	10
1.4.2.2. Fracture toughness.....	10
1.4.2.3. Zirconia aging.....	11
1.4.2.3.1. Subcritical crack growth(SCG)	11
1.4.2.3.2. Low temperature degradation.....	12

1.4.3.	Biological properties	13
1.5.	Applications of zirconia in dentistry	14
1.5.1.	Fabrication of ceramic posts.....	14
1.5.2.	Zirconia based implants.....	14
1.5.3.	Fabrication of Implant Abutments.....	15
1.5.4.	Zirconia-Based Orthodontic Brackets	15
1.5.5.	Zirconia in removable prosthodontics	16
1.5.6.	Zirconia-Based fixed prostheses.....	16
1.6.	Bonding of dental zirconia	17
2.	Zirconia primers	20
3.	Resin cements	22
3.1.	Composition of resin cements	23
3.2.	Classification of resin cements.....	23
3.2.1.	According to the method of curing.....	23
3.2.2.	Classification according to the adhesive scheme.....	25
3.3.	Factors affecting the performance of resin cements	29
3.3.1.	Mechanical properties	29
3.3.2.	Film thickness.....	29
3.3.3.	Water sorption and solubility	29
3.3.4.	Bond strength.....	32
3.3.5.	Degree of conversion.....	32
4.	Evaluating the effect of the zirconia primer on the performance of resin cement	33

4.1. Bond strength evaluation	33
4.2. Water Sorption and solubility evaluation	37
4.3. Degree of conversion evaluation	37
Aim of the study	41
Materials & Methods	42
Results	63
Discussion.....	82
Summary and conclusions.....	99

LIST OF TABLES

	Page
Table 1: Materials used in the study, their compositions, manufacturers and lot numbers.	42
Table 2: Means, Standard deviations (SD), and Standard errors (SE) of shear bond strength (MPa) of both resin cements with and without the primer at different storage time.....	65
Table 3: Percentage % of each mode of failure within different groups. (CD=Control duolink, CB=Control Biscem, PD= Primer+ duolink, PB= Primer+Biscem)	69
Table 4: Means, standard deviations and, standard errors for water sorption ($\mu\text{g} / \text{mm}^3$) of the two resin cements with and without the use of the primer	74
Table 5: Means, standard deviations (SD) and, standard errors of (SE) for Solubility ($\mu\text{g} / \text{mm}^3$) results of the two resin cements with and without the use of the primer	76
Table 6: Means, Standard deviations (SD) and standard errors(SE) of DC% of the two resin cements with and without primer application.	81

LIST OF FIGURES

	Page
Figure 1: Structural formula of 10- MDP monomer, n=10.....	22
Figure 2. The materials used in the study	43
Figure 3: Flow chart for bond strength specimens' grouping.....	44
Figure 4: The prepared bond strength specimens	46
Figure 5: Macro-shear bond strength testing.....	47
Figure 6: Flow chart for water sorption, solubility and DC specimens' grouping.....	49
Figure 7. (A) Assembled split Teflon mold (B) Disassembled split Teflon mold (C&D) Steps of specimens preparation for water sorption and solubility test.....	51
Figure 8. Schematic diagram showing the curing technique of water sorption and solubility specimens.....	51
Figure 9: A photograph showing the specimens in the desiccator.	52
Figure 10: A photograph showing water sorption specimen during weighing	53
Figure 11: A photograph showing the Teflon mold used for preparation of DC specimens.....	57
Figure 12: Schematic diagram for the mold used for DC specimens ...	57
Figure 13: The mortar and pestle used in the specimens grinding	59

Figure 14: The pelleting device	59
Figure 15: The hydraulic press	59
Figure 16: A photograph showing FTIR spectrometer.....	61
Figure 17: Schematic representation of the baseline method used to determine the ratio of the aliphatic absorbance peak (1638 cm ⁻¹) and aromatic peak at (1608 cm ⁻¹). The peak heights were measured in relation to the base line indicated by the red lines.....	61
Figure 18: Column chart showing mean values of SBS at 24 h for different groups.....	65
Figure 19: Column chart showing mean values of shear bond strength at 6 months for different groups.	67
Figure 20: Column chart showing mean values of SBS at 24 h and 6 months for different groups.	67
Figure 21: A histogram showing %modes of failure in different groups.	68
Figure 22: Stereomicroscope image 20x showing the adhesive mode of failure.....	70
Figure 23: Stereomicroscope images 20x showing mixed mode of failure.....	70
Figure 24: Stereomicroscope image 20x showing cohesive mode of failure.....	71
Figure 25: Scanning electron micrograph at 500x showing clean zirconia surface indicating the adhesive mode of failure.	71

Figure 26: Scanning electron micrograph showing the mixed mode of failure with low magnification 100x (a) and higher magnification 200x (b), R is the remnants of detached resin cement specimen, Z is the zirconia surface and the yellow arrows point to traces of the cement..	72
Figure 27: Scanning electron micrograph at 100x showing a cohesively broken resin cement specimen,R is the resin cement specimen and Z is the zirconia surface.....	72
Figure 28: Column chart showing mean values of water sorption for the different groups.....	74
Figure 29: Column chart showing mean values of solubility for different groups.	76
Figure 30: Scanning electron micrograph at 100x of water sorption specimens (BisCem group).....	77
Figure 31: Scanning electron micrograph at 100x of water sorption specimens (BisCem+primer group). The arrows point to the air voids present in the specimen.....	78
Figure 32: Scanning electron micrograph at 100x of water sorption specimens (Duolink group)	79
Figure 33: Scanning electron micrograph at 100x of water sorption specimens (Duolink+primer group). The arrows point to the air voids present in the specimen.....	79
Figure 34: Column chart showing mean degree of conversion in different groups.	81
Figure 35: Models suggested for mechanism of primer bonding.	88

List of abbreviations

Abbreviation	Explanation
6-MHPA	6-methacryloyloxyhexyl phosphonoacetate
ADA	American Dental Association
ANOVA	Analysis of variance
AR	Adhesive resin cements
ATR	Attenuated total reflectance
Bis-GMA	Bisphenol A-glycidyl methacrylate
BPDMA	Biphenyl dimethacrylate
C	Cubic phase
Ce-TZP	Ceria stabilized zirconia
CR	Conventional resin cements
CQ	Camphorquinone

DC	Degree of conversion
DSC	Differential scanning calorimetry
DTA	Differential thermal analysis
EDMAB	Ethyl-4-dimethylaminobenzoate
EPR	Electron paramagnetic resonance
Er:YAG	Erbium-doped yttrium aluminium garnet laser
FIR	Far-infraed
FPD	Fixed partial denture
FTIR	Fourier transform infrared spectroscopy
HEMA	Hydroxyethyl methacrylate
IR	Infrared
ISO	International Organization for Standardization
K.V	Kilovoltage
KBr	Potassium bromide
LED	Light emitting diode
LTD	Low temperature degradation

M	Monoclinic phase
MDP	Methacryloyloxydecyl dihydrogen phosphate
MEHQ	4-Methoxyphenol
META	4-methacrylethyl trimellitic anhydride
Mg-PSZ	Magnesia partially stabilized zirconia
MIR	Mid-infrared
NIR	Near-infrared
NMR	Nuclear magnetic resonance
Phenyl-p	2-Methacryloyloxyethyl phenyl phosphate
PMGDM	Pyromellitic glycerol dimethacrylate
PMGDM	Pyromellitic glycerol dimethacrylate
PPD	Phenyl propanedione
PSZ	Partially stabilized zirconia
R	Resin cement
