# **Comparative Characterization Study of Nuclear Track Detector (CR-39) and the Used Filmstrip for Uranium Ore Exploration**

**A Thesis**

“Submitted for the degree of Master Science  
as a partial Fulfillment for requirement of the master of Science”

**By**

***Rana Sami Kotb Aita***

**Supervisors**

**Prof. Dr. Mona Mohamed Abd Latif Mohsen**

Prof. of Applied Nuclear Physics  
Faculty of Science - Ain Shams University.

**Prof. Dr. Emad Hassan Aly**

Prof. of Applied Nuclear Physics  
Faculty of Science - Ain Shams University.

**Prof. Dr. Sayed Fahmy Hassan**

Prof. of Radiation Physics  
Nuclear Materials Authority.

**(2018)**

# APPROVAL SHEET

Title of the M.Sc. Thesis

## **Comparative Characterization Study of Nuclear Track Detector (CR-39) and the Used Filmstrip for Uranium Ore Exploration**

Name of the Candidate

**Rana Sami Kotb Aita**

Submitted to

**Department of Physics, Faculty of Science, Ain Shams University**

This Thesis has been approved for submission by

بسم الله الرحمن الرحيم

(سورة العلق : آية رقم ٥)

## ACKNOWLEDGMENT

Praise is to Allah, who guided me to do this work.

I wish to express my deepest thanks and gratitude to ***Prof. Dr/ Mona Mohamed Abd Latif***, Professor of Applied Nuclear Physics, Faculty of Science, Ain Shams University, for her encouragement, supervision, valuable criticism and fruitful advice.

My deepest thanks to ***Prof. Dr/ Emad Hassan Aly***, Professor of Applied Nuclear Physics, Faculty of Science, Ain Shams University, for his supervision and valuable encouragement during the course of this work.

My gratitude and deep thanks to ***Prof. Dr/ Sayed Fahmy Hassan***, Professor of Radiation Physics, Nuclear Materials Authority, for his effort, and fruitful help, continuous supervision, guidance and valuable encouragement, and who gave me some of his valuable time and advice during my work in the laboratory as well as to provide the tools for the study of films and a microscope.

My utmost gratitude and deep thanks to ***Prof. Dr/ Ibrahim El-Kattany El-Aassy***, Professor of Applied Geology, Nuclear Materials Authority, for suggesting the problem, fruitful discussions, stimulating suggestions and for his advice throughout this work and strong interest in my work.

I wish to express my deep thanks and gratitude to my Father, ***Prof. Dr/ Sami Kotb Aita***, Professor of Sedimentology, Nuclear Materials

---

Authority, for his encouragement and helping me in the field and laboratory works.

My deepest thanks and gratitude to ***Dr/ Eman Mohamed Ibrahim***, Assistant Professor of Radiation Physics, Nuclear Materials Authority, for her everlasting encouragement, continuous supervision, fruitful advice.

My utmost gratitude and deep thanks to ***Prof. Dr/ H. M. EL-Samman***, Professor of Nuclear Physics, Faculty of Science, Menofia University, for fruitful help and strong interest in my work, as well as to provide the tools for the study of films.

I would also like to thank all members of Physics Department, Faculty of Science, Faculty of Education, Ain Shams University and the Radiation, Nuclear and Chemistry Labs in Nuclear Materials Authority, as well as all my colleges for providing guidance, tools and support in completing this research.

***My Mother, my husband Eng. Ahmed El-Garhy, my kids (Zeyad & Nada) and all my family***, their wishes and blessings have always created confidence in me to accomplish this work, sincere help and continuous encouragement.

***Rana Sami Kotb Aita***

## CONTENTS

<b>LIST OF FIGURES</b> .....	<b>Vi</b>
<b>LIST OF TABLES</b> .....	<b>Xi</b>
<b>ABSTRACT</b> .....	<b>Xiii</b>
<b>CHAPTER ONE</b> .....	<b>1</b>
<b>LITERATURE REVIEW</b>	
1.1 Introduction.....	<b>1</b>
1.2 Literature Review.....	<b>1</b>
1.2.1 Radon Concentration - Track Density Calibration Factor.....	<b>1</b>
1.2.2 Etching Conditions.....	<b>3</b>
1.2.3 Radon Gas Concentration, Exhalation and Emanation	<b>7</b>
1.2.4 Activity Measurements of U, Th, K and Ra and Hazard Indices.....	<b>16</b>
1.2.5 Solid State Nuclear Track Detectors.....	<b>22</b>
1.2.6 Positron Annihilation Lifetime Spectroscopy.....	<b>28</b>
1.3 Main Characteristics of the Studied Area.....	<b>30</b>
1.3.1 Geologic Setting.....	<b>30</b>
1.3.2 Climate.....	<b>32</b>
1.4 Aim of the Work .....	<b>32</b>
<b>CHAPTER TWO</b> .....	<b>34</b>
<b>THEORITICAL BACKGROUND</b>	
2.1 Natural Decay Series.....	<b>34</b>
2.2 Radioactive Equilibrium.....	<b>39</b>
2.2.1 Secular Equilibrium.....	<b>39</b>
2.2.2 Transient Equilibrium.....	<b>40</b>
2.2.3 No Equilibrium.....	<b>41</b>

2.3 Uranium Series Disequilibria .....	41
2.4 Radionuclides in Nature.....	45
2.4.1 Uranium.....	45
2.4.2 Thorium.....	47
2.4.3 Radium.....	48
2.4.4 Radon.....	49
2.4.4.1 Physical and Chemical Properties of Radon.....	50
2.4.4.2 Radon Sources in Nature.....	52
2.4.4.3 Radon Movement.....	53
2.4.4.4 Radon Emanation.....	55
2.4.4.5 Factors Affecting Radon Emanation.....	57
2.4.4.6 Radon Migration.....	59
2.4.4.7 Radon Exhalation.....	60
2.4.4.8 Radon and Radium Health Hazards .....	61
2.5 Radon Measurement Techniques.....	62
2.5.1 Active Techniques.....	62
2.5.1.1 Scintillation Cells.....	62
2.5.1.2 Ionization Chamber.....	63
2.5.1.3 Electrostatic Collection of Decay Products.....	63
2.5.2 Passive Techniques.....	63
2.5.2.1 Charcoal Detectors.....	63
2.5.2.2 Electret Ion Chamber.....	64
2.5.2.3 Etched Track Detectors.....	65
2.6 Solid State Nuclear Track Detectors .....	65
2.6.1 Advantages of SSNTDs.....	65
2.6.2 Applications of SSNTDs .....	66
2.6.2.1 Uranium Exploration .....	66
2.6.2.2 Quantitative Determination of Uranium in Soil and Leaf Samples.....	67
2.6.2.3 Very Low Level Alpha Estimation in Waste Streams.....	67

2.6.2.4 Measurements of Alpha to Spontaneous Fission Ratios of Heavy Actinides.....	68
2.6.3 Types of SSNTDs.....	68
2.6.4 Special Features of SSNTDs.....	71
2.6.5 Energy Loss Mechanisms.....	72
2.6.5.1 Total Energy Loss (dE/dx).....	72
2.6.5.2 Primary Ionization Loss (J).....	73
2.6.5.3 Restricted Energy Loss (REL).....	74
2.6.6 Principles of Track Formation on the Solid State Nuclear Track Detector.....	75
2.6.7 CR-39 SSNTD.....	76
2.7 Positron Annihilation Lifetime Spectroscopy in Materials.....	77
2.8 The Free Volume and Hole Theory in Polymers.....	80
<b>CHAPTER THREE.....</b>	<b>84</b>
<b>EXPERIMENTAL TECHNIQUES</b>	
3.1 Laboratory Experiments for Cinema Film Preparation.....	84
3.1.1 Clearing Process.....	84
3.1.2 Structure Determination .....	86
3.1.3 Etching Conditions Optimization for Cinema Film.....	88
3.1.3.1 Irradiation Process .....	88
3.1.3.2 Track Visualization.....	89
3.1.4 Calibration Process.....	90
3.1.4.1 Radon Calibration Chamber.....	90
3.1.4.2 Calibration Methodology.....	92
3.1.4.3 Etching Process of Cinema Film and CR-39 ....	94
3.1.4.4 Tracks Counting Methods and Statistics.....	96
3.2 Comparison between CR-39 and Cinema Film in Some Laboratory Experiments .....	96
3.2.1 Rock Samples Selection.....	96
3.2.2 Gamma Ray Measurements.....	98

3.2.2.1 Rock Samples Preparation.....	98
3.2.2.2 HPGe Detector.....	98
3.2.2.3 Calibration of Gamma Spectrometer .....	100
3.2.2.4 Activity Measurements .....	104
3.2.3 Closed - Can Technique Set Up.....	105
3.2.4 Radon Concentration Measurement .....	107
3.2.5 Surface Exhalation Rate Measurement .....	107
3.2.6 Effective Radium Content .....	108
3.2.7 Emanation Coefficient .....	109
3.2.8 Positron Annihilation Lifetime (PAL) Spectroscopy...	109
3.2.8.1 Positron Source.....	109
3.2.8.2 PAL Instrumental Set Up.....	112
3.2.8.3 Data Analysis of PAL Spectra.....	117
3.3 Field Work .....	121
3.3.1 Cup Preparation (The Open-Cup Mode Detectors).....	121
3.3.2 Cups Planting and Rock Samples Collection.....	124
3.3.3 Hazard Indices .....	125
3.3.3.1 Absorbed Dose Rate.....	125
3.3.3.2 Annual Effective Gamma Dose.....	125
3.3.3.3 Radium Equivalent Activity.....	126
3.3.3.4 External Hazard Index.....	126
3.3.3.5 Internal Radiation Hazard Indexes.....	126
3.3.3.6 Gamma Activity Concentration Index.....	127
3.3.3.7 The Annual Effective Alpha Dose.....	127
3.3.3.8 Alpha Index.....	128
3.3.4 Cups collection and Radioactivity Study for Area under Investigation.....	128
<b>CHAPTER FOUR.....</b>	<b>129</b>
<b>RESULTS AND DISCUSSION</b>	
4.1 Comparison between CR-39 and Cinema Film.....	129

---

4.1.1 Laboratory Experiments.....	129
4.1.1.1 Track Densities.....	131
4.1.1.2 Radon Gas Concentrations.....	132
4.1.1.3 Radon Exhalation Rates .....	132
4.1.1.4 Emanation Coefficient.....	133
4.1.2 Field Measurements.....	136
4.2 Radionuclides Distribution.....	139
4.2.1 Activity Ratios.....	146
4.2.2 Thiel Diagram.....	159
4.2.3 Radionuclides Concentration.....	162
4.3 Comparison between Gamma and Alpha Measurements...	164
4.3.1 Radon Measurements and Radionuclides Concentration.....	164
4.3.2 Contour Maps for Radionuclides Distribution.....	169
4.4 Hazard Indices of the Study Area.....	171
4.5 Positron Annihilation Lifetime Spectroscopy.....	178
4.6 Infrared Spectroscopy.....	184
<b>SUMMARY AND CONCLUSION.....</b>	<b>187</b>

<b>ARABIC SUMMARY</b>	

## LIST OF FIGURES

(1-1)	Landsat image showing the location of Um Bogma region including Talat Seliem locality.....	31
(1-2)	Geologic map of Talat Seliem locality.....	32
(2-1)	Natural decay series: Uranium-238.....	36
(2-2)	Natural decay series: Thorium-232.....	37
(2-3)	Natural decay series: Uranium-235.....	38
(2-4)	Secular equilibrium state.....	40
(2-5)	Relationship between half-lives in transient equilibrium	40
(2-6)	Schematic of activity in non-equilibrium.....	41
(2-7)	(a) Schematic diagram of recoil ejection of $^{234}\text{Th}$ from a spherical grain as a result of the alpha decay of $^{234}\text{U}$ , followed by beta decay of $^{234}\text{Th}$ to $^{234}\text{U}$ (b) Radioactive decay of $^{238}\text{U}$ and $^{234}\text{U}$ .....	44
(2-8)	Natural radiation exposure to human.....	51
(2-9)	Radon can move through cracks in rocks and through pore spaces in soils.....	54
(2-10)	Some radon atoms remain trapped in the soil and decay to reach stable lead; other atoms escape quickly into the air.....	55
(2-11)	Scheme of radon emanation phenomenon. Emanation: (A), (B), (E) and (F). Not emanation: (C), (D) and (G). If radon cannot diffuse out from inner pore into outer, radon in point (F) should not be regarded as being emanated. Arrows following terminal points of recoil represent diffusion process, which are not to scale.....	57
(2-12)	Radon emanation, migration and exhalation.....	61
(2-13)	A latent track is formed in: (a) inorganic solid by the ionization and production of dense positive ions along	

	the ion path (b) the breakage of polymeric chains by the passage of charge particles.....	70
(2-14)	Schematic representation of the basic relations of the irradiation, track etching and track visualization phase	75
(2-15)	Show an etch pit profile with prolonged chemical etching.....	76
(2-16)	Positron annihilation to two gamma quanta.....	78
(2-17)	Ps localization diagram in the free volume holes of a polymer before its annihilation.....	81
(2-18)	Tao-Eldrup model.....	82
(3-1)	Cinema film structure.....	85
(3-2)	The cinema film before and after cleaning.....	85
(3-3)	Schematic of an FTIR system.....	86
(3-4)	IR spectrum of cinema film.....	87
(3-5)	Chemical structure of: a) cinema film and b) CR-39...	88
(3-6)	Schematic diagram of experimental arrangement used to irradiate the cinema film.....	89
(3-7)	Optical images of alpha particle's tracks on Cinema film at different etching times: a) 15min, b) 35min, c) 45min.....	89
(3-8)	Radon calibration chamber.....	91
(3-9)	Variation of measured track density as a function of radon concentration.....	93
(3-10)	Block diagram of the gamma spectrometer.....	99
(3-11)	Gamma-ray spectra for IAEA reference materials: RGU-1, RGTh-1 and RGK-1, respectively.....	102
(3-12)	The absolute efficiency for volume 200ml for the gamma-ray energies emitted by reference materials: RGU-1, RGTh-1 and RGK-1.....	103

<b>(3-13)</b>	Schematic drawing of the closed-can technique with the selected samples.....	<b>106</b>
<b>(3-14)</b>	The nuclear decay scheme of $^{22}\text{Na}$ .....	<b>110</b>
<b>(3-15)</b>	Positron energy distribution.....	<b>111</b>
<b>(3-16)</b>	The source-sample sandwich.....	<b>111</b>
<b>(3-17)</b>	Schematic diagram of positron annihilation lifetime spectrometer.....	<b>112</b>
<b>(3-18)</b>	Cinema film and CR-39 samples preparation for PAL analysis.....	<b>113</b>
<b>(3-19)</b>	PAL spectra.....	<b>118</b>
<b>(3-20)</b>	Typical (a) raw and (b) resolved PALS spectrum of polymer.....	<b>121</b>
<b>(3-21)</b>	Open-cup detectors arrangement.....	<b>122</b>
<b>(3-22)</b>	Landsat image of Talet Selim Locality showing location of samples and film cups.....	<b>123</b>
<b>(3-23)</b>	The Cup detector technique used in the underground monitoring stations with the two SSNTDs.....	<b>124</b>
<b>(4-1)</b>	The measured track densities for different samples by the two SSNTDs (CR-39 and Cinema film).....	<b>131</b>
<b>(4-2)</b>	The calculated radon gas concentrations for different samples by the two detectors.....	<b>132</b>
<b>(4-3)</b>	Variation of surface exhalation rates for different samples by the two detectors.....	<b>133</b>
<b>(4-4)</b>	Variation of the $^{234}\text{U} / ^{238}\text{U}$ activity ratio for different types of the studied samples. The equilibrium state is shown with the solid line while the dashed lines represent the equilibrium range. ....	<b>149</b>
<b>(4-5)</b>	Variation of the $^{230}\text{Th} / ^{238}\text{U}$ activity ratio for different types of the studied samples. The equilibrium state is shown with the solid line while the dashed lines represent the equilibrium range. ....	<b>150</b>
