Cairo University  
Faculty of Veterinary Medicine  
Department of Poultry Diseases

**INVESTIGATION ON  
ORNITHOBACTERIUM RHINOTRACHEAL  
INFECTION IN TURKEYS**

Thesis submitted

By

***Khaled Aly Youssef Abd El-Gawaad***

B.V.Sc., Cairo University, 1982, M.V.Sc., Poultry Diseases, Zagazig University, 1995

For the degree of

Doctor of Philosophy in Veterinary Science

(Poultry Diseases)

***Under the Supervision of***

***Professor Dr. Mohamed H.H. Awaad***

Professor and Head of Poultry Diseases Department,

Faculty of Veterinary Medicine, Cairo University

***Professor Dr. Elham F. El-Khashab***

Professor of Poultry Diseases,

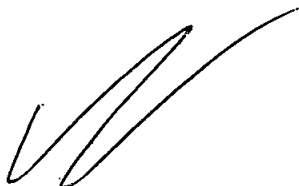

Faculty of Veterinary Medicine, Cairo  
University

***Professor Dr. A. A. El-Gohary***

Professor of Poultry Diseases and Head of

Poultry & Fish Department,  
Faculty of Veterinary Medicine, Tanta  
University

2005

**Cairo University**  
**Faculty of Veterinary Medicine**  
**Poultry Diseases Department**

---

**Approval Sheet**  
**For**  
**Ph.D. in Poultry Diseases**

**Candidate:** Khaled Aly Youssef Abd El-Gawaad  
**Major field:** Poultry Diseases

**Approved by examining committee:**

1. Prof. Dr. M.M.Z.El-Demerdash

Prof. and Head of Poultry Diseases Department  
Faculty of Veterinary Medicine - Canal El-Sues University

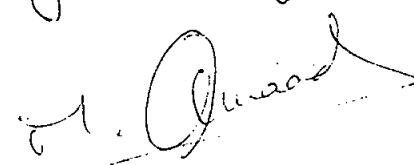

2. Prof. Dr. T.I. Youssef

Prof. of Poultry Diseases  
Faculty of Veterinary Medicine - Cairo University

3. Prof. Dr M.H.H. Awaad

Prof. and Head of Poultry Diseases Department  
Faculty of Veterinary Medicine - Cairo University

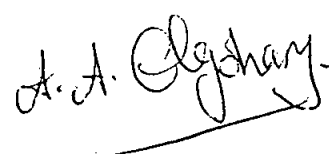

4. Prof. Dr Elham F. El-Khashab

Prof. of Poultry Diseases  
Faculty of Veterinary Medicine - Cairo University

5. Prof. Dr .A.A. El-Gohary

Prof. and Head of Poultry and Fish Department  
Faculty of Veterinary Medicine - Tanta University

2/1/2005

# **DEDICATION**

## LIST OF TABLES

Tables	Page
1 History of the investigated turkey flocks in Giza Governorate	89
2 Results of Isolation of ORT from examined turkey flocks	98
3 Incidence of ORT isolations from various organs of examined commercial turkey flocks in Giza Governorate	99
4 Biochemical characteristics of suspected bacteria isolated from naturally infected turkeys	104
5 Electrophoretic characterization of ORT field strains using SDS_PAGE	106
6 Results of in vitro sensitivity test of Ornithobacterium rhinotracheale isolated from commercial turkeys-meat-type	111
7 Results of antibody detection of ORT in the collected serum of turkeys flocks	114
8 Lesion scores of experimental aerosol infection of turkey (meat type) with the isolated strain of ORT alone and triggered with TRTV vaccine	123
9 Average body weight of turkey experimentally infected with ORT and triggered with TRTV vaccine	124
10 Feed consumption intake/feed conversion rate and body gained of turkey experimentally infected with ORT and triggered with TRT virus vaccine	125
11 Clinical observations and mortality during the first 2 weeks post vaccination	139
12 Mortality after week 2 post vaccination	139
13 The respiratory gross lesion score of respiratory disease appeared at 88 days of age	144

	Tables	Page
14	Histopathological lesion score of different organs in vaccinated and unvaccinated turkeys	144
15	The rate of histopathological lesions in vaccinated and unvaccinated turkey (sub) flocks	144
16	Results of bacteriological examination of tracheal swabs collected at different intervals from vaccinated and unvaccinated turkey (sub)flocks	154
17	Results of systemic reactions in turkeys after ORT vaccination	155
18	Results of local reactions in vaccinated turkeys after ORT vaccination	156
19	Mean body weight of vaccinated and unvaccinated turkeys with ORT vaccine	157

## LIST OF FIGURES

Figure	Page
1 Commercial turkeys meat type naturally infected with ORT showing facial edema, sinusitis with swelling, conjunctivitis and expectoration of blood-stained mucous just prior to death	91
2 "	91
3 "	92
4 Commercial turkeys meat type naturally infected with ORT showing depression, ruffling feathers, poor performance recumbancy , dyspnea and facial oedema	93
5 "	93
6 Lung of commercial turkey-meat type naturally infected with ORT showed (in right) congestion and (in left) normal which give the picture of unilateral pneumonia	94
7 Airsacs of commercial turkey-meat type, naturally infected with ORT, showed thickness, airsacculitis and formation of a big masses of caseated materials	95
8 Trachea of commercial turkey-meat type naturally infected with ORT showed tracheitis and blood stained mucous in the lumen	96
9 Tendon sheath of commercial turkey-meat type naturally infected with ORT showed enlargement, and congestion	96
10 Colonies of ORT cultured on 10% sheep blood agar media showing pin head in size circular, non haemolytic and grayish white	103
11 Biochemical reaction of ORT isolates using API 20 NE microtest system	103

	Figure	Page
12	Electrophoretic characterization of ORT strain No. 1 in comparison to the marker	107
13	Electrophoretic characterization of ORT strain No. 2 in comparison to the marker	08
14	Comparative electrophoretic characterization of ORT field strain	109
15	Shows antibiogramme sensitivity test against ORT strains	112
16	Section in trachea of commercial turkey naturally infected with ORT showed desquamation of epithelium, depletion of lymphoid follicles and submucosal edema (H & E x 33)	116
17	Section in lung of commercial turkey naturally infected with ORT, showed fibrin exudate and cellular infiltration mainly esinophils and heterophils in the primary bronchus and air capillaries (H&E X 33)	116
18	Section in lung of commercial turkey naturally infected with ORT, showed the hetero-esinophilic cells infiltration around the secondary bronchus (H&E x 134)	117
19	Section in lung of commercial turkey naturally infected with ORT, showed multiple giant cells around parabronchus (H&E x 134)	117
20	Section in liver of commercial turkey naturally infected with ORT, showed granulome consists of aggregation of lymphocytes and macrophages surrounded by C.T. capsule (H&E x 134)	118
21	Section in liver of commercial turkey naturally infected with ORT, showed coagulative necrosis around the portal traid (H&E x33)	118
22	Section in heart of commercial turkey naturally infected with ORT, showed free RBCs in between cardiac muscle (H&Ex33)	119

Figure	Page
23 Commercial turkeys meat type experimentally infected with ORT, showed conjunctivitis sneezing, nasal discharge, depression and lowering in performance	126
24 Commercial turkey meat type experimentally infected with ORT, showed conjunctivitis, and supraorbital and submandibular cutaneous nodules	126
25 Trachea of commercial turkey meat type experimentally infected with ORT, showed tracheitis with some exudate in the tracheal lumen	127
26 lung of commercial turkey meat type experimentally infected with ORT, showed unilateral pneumonia (Right lobe was normal and left lobe was pneumonic)	127
27 Section in trachea of commercial turkey experimentally infected with ORT, showed desquamation of epithelial lining and depletion of subepithelial lymphoid follicles (H&E x 33)	128
28 Section in trachea of commercial turkey experimentally infected with ORT, showed oedema in the submucosa and desquamation of epithelial lining (H & E x 33)	128
29 Section in lung of commercial turkey experimentally infected with ORT, showed congestion of blood capillaries inbetween air capillaries (H&E x 33)	129
30 Section in lung of commercial turkey experimentally infected with ORT, showed heavy inflammatory cell infiltrations around the secondary bronchus. Notice the fibrin exudate and inflammatory cells inside the secondary bronchus (H&E x 33)	129
31 Section in liver of commercial turkey experimentally infected with ORT, showed congestion of central veins and sinusoids (H&E x 33)	130

Figure	Page
32 Section in liver of commercial turkey experimentally infected with ORT, showed macrophages and lymphocytes aggregation in portal area (H&E x 66)	130
33 Commercial turkey meat type experimentally infected with ORT and triggered with TRTv <sub>v</sub> , showed depression, stunted growth, ruffling feathers and paralysis of wing.	131
34 Commercial turkey meat type experimentally infected with ORT and triggered with TRTv <sub>v</sub> , showed stunted growth, ruffling feathers and watery diarrhea	131
35 Commercial turkey meat type experimentally infected with ORT and triggered with TRTv <sub>v</sub> , showed Nodules & edema in Comb	132
36 Commercial turkey meat type experimentally infected with ORT and Triggered with TRTv <sub>v</sub> , showed conjunctivitis, formation of supraorbital nodules, sinusitis and nodules in dewlap	132
37 Airsacs of commercial turkey meat type experimentally infected with ORT and triggered with TRTv <sub>v</sub> , showed very turbid and thickness, with gap formation containing caseous like materials	133
38 Lung of commercial turkey meat type experimentally infected with ORT and triggered with TRTv <sub>v</sub> , showed bilateral pneumonia	133
39 Section in trachea of commercial turkey experimentally infected with ORT and triggered with TRTv <sub>v</sub> , showed vacuolation of goblet cells and edema in the submucosa (H&E x 33)	134
