**Title of Thesis: NUMERICAL INVESTIGATION FOR SMOKE SPREAD IN UNDERGROUND TUNNELS**

**Key Words:** (Smoke Control-Jet fans- Underground Tunnels -FDS)

**Summary:**

The present work is a numerical simulation for smoke control in underground tunnels, simulation cases investigation aims to study the Smoke propagation, Toxic gases, Temperature and Visibility For these purposes, various simulations were performed in Al-Azhar road tunnel having: 2.4 km length; curved cross section with a width of 8 m and height of 6.5 m; two lanes (each of them used only for one traffic direction); The tunnel investigated was equipped with a longitudinal ventilation system .

Three different burning vehicles (Single car, Four Cars, and a bus), placed in the center of the driving lane. Peaks of the heat release rate were assumed to be: 5, 20 and 30 MW for the Single car, Four Cars, and a bus, respectively, simulated as a fire with an unsteady heat release rate resulted from burning Heptane as a fuel at jet fan velocity of 22, 26 m/sec. In this investigation, Fire Dynamics Simulator (FDS) software version 5.5.3 is utilized to simulate six case studies in 80 m long, 8 m wide and 6.5 m height domain with a different fire source (single passenger car, four cars and Bus)

## **Disclaimer**

I hereby declare that this thesis is my own original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

Name: Ahmed Emad el-din Mohamed Hamdy

## **ACKNOWLEDGEMENT**

Firstly, I would like to thank ALLAH, whom I owe everything, for His generousness and support through all my life.

I would like to express my gratitude to a number of people for their guidance, help, and support during my work on this thesis. I owe a great debt to my supervisor Prof. Prof. Mahmoud A Fouad, Professor of Power Mechanical, Faculty of Engineering, Cairo University for his continuous support and his close supervision and decent guidance throughout the work and during the final editing phase.

My sincere thanks are due to Dr.Hatem Haridy, Faculty of Engineering, Cairo University for her instructive comments, directive views and cooperation throughout the work.

My deepest gratitude goes to my family for their continuous support, patience, and encouragement. Last, but not least, I would like to emphasize the sincere cooperation and kind consideration offered by my friends and colleagues.

## Table of Contents

1. INTRODUCTION .....	1
1.1 General .....	1
1.2 The Hazards of Smoke .....	1
1.2.1 Toxicity .....	1
1.2.2 High Temperatures .....	1
1.2.3 Reduced Visibility .....	2
1.2.4 Back layering .....	2
1.3 Tunnel Fires History .....	3
1.4 Systems of Tunnel Ventilation .....	5
1.4.1 The parameters of ventilation system .....	5
1.4.2 Natural Ventilation .....	6
1.4.3 Longitudinal Mechanical Ventilation .....	6
1.4.4 Fully Transverse Ventilation .....	7
1.4.5 Semi Transverse Ventilation .....	8
1.4.6 Hybrid (Combination) Ventilation Systems .....	8
1.5 Jet fans ventilation .....	9
1.6 Types of jet fans .....	9
1.6.1 Axial Jet Fans .....	10
1.6.2 Radial Jet Fans .....	10
1.7 Computer Modeling and Simulation .....	11
2. LITERATURE REVIEW .....	12
2.1 Design fire in a tunnel .....	12
2.2 Human Exposure to Smoke .....	15
2.3 Human Exposure to Toxic Gases .....	16
2.3.1 Carbon dioxide (CO <sub>2</sub> ) .....	16
2.3.2 Carbon monoxide (CO) .....	17
2.4 Safe visibility limits .....	19
2.5 Human Exposure to Heat & Thermal Radiation .....	20
2.6 Previous Experimental and Numerical work on Al-Azhar Tunnel .....	22
2.7 Aim of present work .....	26
2.8 Outline of the Thesis .....	26
3. GOVERNING EQUATIONS .....	27
3.1. Description of FDS .....	27
3.1.1. Hydrodynamic Model .....	27
3.1.2. Combustion Model .....	27
3.1.3. Radiation Transport .....	28
3.2. Governing Equations .....	28
3.2.1. Mass and Species Transport .....	28
3.2.2. Momentum Transport .....	29
3.2.3. Energy Transport .....	29
3.2.4. Equation of State .....	30
3.3. Visibility .....	31
3.4. Large Eddy Simulation (LES) .....	31
3.6. Combustion (Mixture Fraction Model) .....	32
3.7. Radiation (Radiation Transport Equation) .....	33
3.8. The Heat Conduction Equation for a Solid .....	34

3.9. Radiation Heat Transfer to Solids .....	34
3.10. Convective Heat Transfer to Solids .....	35
3.11. The Finite Volume Discretization Technique .....	35
3.11.1 Second Order Upwind.....	35
3.11.2. The QUICK Scheme .....	36
3.11.3. Pressure Interpolation Method .....	36
3.11.4. Pressure Velocity Coupling.....	36
3.11.5. Temporal Discretization.....	37
3.11.6. Under-Relaxation Parameters .....	37
3.12 Linearization Techniques (Implicit Vs Explicit).....	37
3.13 Solution Algorithm .....	38
4. NUMERICAL INVESTIGATION PRINCIPLES.....	39
4.1. Validation of FDS .....	39
4.1.1. Test description .....	40
4.1.2. Fire Source .....	40
4.1.3. Upper Layer Temperature .....	40
4.1.4. FDS simulations .....	40
4.1.5. Comparison between the FDS prediction and a real scale compartment pool fire test.....	41
4.2. Grid Sensitivity analysis .....	42
4.3. Problem Design Description. ....	43
4.3.1 Al Azhar Tunnel.....	44
4.3.2 Computational Domain .....	45
4.3.3 Jet Fans.....	47
4.3.4 Vehicles.....	48
4.3.5 Fire Design and HRR .....	48
4.3.6 Simulation cases of the present study analysis .....	50
5. RESULTS AND DISCUSSION .....	51
5.1 Smoke Spread & Back-layering.....	51
5.2 Carbon dioxide (CO <sub>2</sub> ) concentration .....	59
5.3 Carbon monoxide (CO) concentration .....	66
5.4 Temperature Distribution.....	74
5.5 Visibility.....	81
6. SUMMARY AND CONCLUSION.....	88
6.1 Conclusions .....	88
6.2 Suggested future work.....	89
REFERENCES.....	90

## LIST OF SYMBOLS AND ABBREVIATIONS

Symbol	Quantity
$At_v$	Ceiling jet velocity decrement factor
$c_p$	Constant pressure specific heat
$C_s$	Smagorinsky constant
$c_s$	Solid material specific heat
$D$	Diffusion coefficient, Dilution parameter
$f_b$	External force vector (excluding gravity)
$g$	Acceleration of gravity
$h$	Enthalpy; heat transfer coefficient
$h_\alpha$	Enthalpy of species $\alpha$
$H$	Plume height ,m
$\Delta H$	Heat of combustion
$I$	Radiation intensity
$I_b$	Radiation blackbody intensity
$I_n$	Radiation intensity integrated over the band n
$I_{b,n}$	Radiation intensity of black body integrated over the band n
$k$	Thermal conductivity; suppression decay factor
$K$	Light extinction coefficient
$K_m$	Mass extinction coefficient
$L$	Length scale
$\dot{m}_{b,\alpha}'''$	Mass production rate of species a by evaporating droplets/particles
$\dot{m}_F''$	Fuel mass flux
$\dot{m}_\alpha'''$	Mass production rate of species a per unit volume
$p$	Pressure
$\bar{p}_m$	Background pressure of m <sup>th</sup> pressure zone
$Pr$	Prandtl number
$\dot{Q}$	Total heat release rate
$Q^*$	Characteristic fire size
$\dot{q}''$	Heat flux vector
$\dot{q}'''$	Heat release rate per unit volume
$\dot{q}_c''$	Convective flux to a solid surface

$\dot{q}_r''$	Radiative flux to a solid surface
$R$	Universal gas constant
$r$	Radial distance from the impinging point of the plume into the ceiling
$Re$	Reynolds number
$\mathbf{s}$	Unit vector in direction of radiation intensity
$S$	Visibility, m
$Sc$	Schmidt number
$S_{ij}$	Symmetric rate of strain tensor
$T$	Temperature, C
$t$	Time, Sec
$\mathbf{U}$	$(u, v, w)$ Velocity vector, m/s
$u^+$	Non-dimensional stream-wise velocity
$u^*$	Friction velocity
$\bar{W}$	Molecular weight of the gas mixture
$W_\alpha$	Molecular weight of gas species $\alpha$
$\mathbf{x}$	$(x, y, z)$ Position vector
$X_\alpha$	Volume fraction of species $\alpha$
$Y_{O_2}^\infty$	Mass fraction of oxygen in the ambient
$Y_F^1$	Mass fraction of fuel in the fuel stream
$Y_\alpha$	Mass fraction of species $\alpha$
$Y_s$	Soot yield
$Z$	Mixture fraction
$Z_f$	Stoichiometric value of the mixture fraction

## Greek Letters

$\delta_{ij}$	Kronecker delta, = 1 for $i = j$ and = 0 for $i \neq j$
$v_s$	Yield of solid residue in solid phase reaction
$v_\alpha$	Stoichiometric coefficient, species $\alpha$
$\sigma_s$	Scattering coefficient
$\tau_{ij}$	Viscous stress tensor
$\chi_r$	Radiative loss fraction
$\nabla$	Gradient
$\varepsilon$	Dissipation rate
$\theta$	Azimuth angle (cylindrical coordinates)
$\kappa$	Absorption coefficient
$\lambda$	Wave length
$\mu$	Dynamic viscosity
$\rho$	Density
$\sigma$	Stefan-Boltzmann constant
