ACKNOWLEDGMENT

The all thanks are for Allah the most merciful, the most beneficent for all his bounties, for all his arrangements to put some of his servants in my way in all my life and to help me completing this work.

I would like to express my deep gratitude to *Prof. Dr. Mostafa Sileet and Dr. Aly M. Soliman* for supervising this dissertation, for their sound advice, technical guidance, continuous support, attention, discussion, professional examples and great encouragement during the preparation of the research.

Great thanks are given to my parents for their continuous support, patience, sacrifice, help, care and encouragement during all my life.

Finally this thesis is dedicated to my husband, for all what he gave to enhance my capabilities and help me going in the way of success.

TABLE OF CONTENTS

	Page
Acknowledgment.....	iv
List of Tables.....	vii
List of Figures.....	viii
Nomenclature.....	xii
Abstract.....	xiv
CHAPTER 1: INTRODUCTION.....	1
1.1 General.....	1
1.2 Objectives of the Current Study.....	4
CHAPTER 2: LITRATURE REVIEW.....	6
Part (I) Unsaturated Hydraulic Conductivity.....	6
2.1 Introduction.....	6
2.2 Determination of Unsaturated Hydraulic Conductivity.....	6
2.2.1 Direct Methods.....	7
2.2.2 Indirect Methods.....	8
Part (II) Methods for Solving the Flow Equation.....	13
2.3 Introduction.....	13
2.4 Solution Techniques.....	14
2.4.1 Analytical Method.....	14
2.4.2 Graphical Method.....	15
2.4.3 Models and Analogies.....	15
2.4.4 Numerical Methods (Mathematical Models).....	16
2.5 Studies and Applications on Earth Dams.....	24
CHAPTER 3: GOVERNING EQUATION AND FORMULATION.....	27
3.1 Introduction.....	27
3.2 Governing Flow Equation and Mathematical Formulation.....	27
3.3 Time Discretization.....	34
3.4 Permeability- Pressure Relationship.....	36
3.5 Residual Flow Algorithm.....	41
3.6 Summary.....	42

CHAPTER 4: MODEL VALIDATION AND RESULTS	43
4.1 Introduction.....	43
4.2 Model Verification.....	43
4.2.1 Flow in Long River Banks Simulated by Parallel Plate Viscous Flow Model.....	43
4.2.2 Aquifer Connected to a Stream via a Permeable Stream Bed.....	47
4.2.3 Aquifer Connected to a Stream via a Semi- Permeable Stream Bed.....	51
4.2.4 Three – Dimensional Transient Free Surface in Glass Bead Model.....	56
4.3 Summary.....	59
CHAPTER 5: MODEL APPLICATIONS	60
5.1 Introduction.....	60
5.2 Two- Dimensional Unconfined Seepage Flow Through an Earth Fill Dam.....	60
5.3 Three- Dimensional Unconfined Seepage Flow from an Irrigation Canal.....	76
5.3.1 Case of Earth Canal.....	76
5.3.2 Case of Lined Canal.....	86
CHAPTER 6: SUMMARY, CONCLUSIONS AND RECOMMENDATIONS	97
6.1 Summary.....	97
6.2 Conclusions.....	98
6.3 Recommendations for Future Work.....	99
REFERENCES	100

LIST OF TABLES

	Page
Table (2-1): Methods Used to Predict $K(h)$ from Textural Data	9
Table(2-2): Methods Used to Determine $\theta(h)$ from Soil Textural and Related Data	9
Table (2-3): Different Values for Parameters β, γ, η	12
Table (3-1): Soil Parameters Values	39
Table (4-1): Total Head at Time 30.0 min for U.S.W.L. of 10.0 m	45
Table (4-2-a): Comparison between the Case of Using Permeable and Semi- Permeable Stream bed, at $X=5.0$ m	55
Table (4-2-b): Comparison between the Case of Using Permeable and Semi- Permeable Stream bed, at $X=10.0$ m	55
Table (5-1): Total Head Values for the Exit Point Out of the Core.....	61
Figure (5-2): Seepage Losses foe Different Lining Slab Permeability at Different Time.....	88
