ACKNOWLEDGMENT

The author would like to express his deep thanks and gratitude to Prof. Dr. Ahmed E. Khazback, Nuclear Materials Authority, for his supervision, guidness and great help through all the stages of the ore dressing studies and critical reading of the manuscript.

Grateful thanks and deep gratitude are due to Prof. Dr. Ahmed M. Bishady, Geology department, Faculty of Science, Minufiya University, for proposing the point of research, supervising, constructive comments, helps through the mineralogical studies and critical reading of the manuscript.

The author is indebted to Prof. Dr. Foad A. Saad, Nuclear Materials Authority, for his supervision, guidness, and help in the electrical conductivity studies.

Indebtedness is also extended to Dr. Maher Dawoud, Geology department, Faculty of Science, Minufiya University, for his continuous supervision and reading the manuscript.

The author wants to record his grateful thanks to Ass. Prof. Dr. Mohamed Abou Bakr, Nuclear Materials Authority, for his help and offering facilities through the experimental work.

The author wishes also to thank Dr. Mohamed. I. Moustafa, Nuclear Materials Authority for his continuous help through the ore dressing works.

Appreciation for the full cooperation during the field trips rendered to Dr. Ahmed El Hadary, Nuclear Materials Authority.

My sincere thanks are rendered to my colleagues in the Nuclear Materials Authority and all who had helped me directly or indirectly during the progress of this work.

To My Father, Mother and My Brothers.

To My Wife and My Son...

Amme

Contents

	Page
CHAPTER ONE : INTRODUCTION	1
1.1. Previous work	1
1.2. Aim and scope of the present work	9
CHAPTER TWO : SEDIMENTOLOGICAL CHARACTERISTICS	10
2.1. Morphology and samples collection	10
2.2. Grain size distribution	14
2.2.1. Results and discussion	21
2.3. Variation of textural parameters	24
2.3.1. Variation of Graphic Mean (M_z) against Inclusive Graphic Skewness (Sk_I)	24
2.3.2. Variation of Graphic Mean (M_z) against Inclusive Graphic Standard Deviation (σ_I)	25
2.3.3. Variation of Inclusive Graphic Standard Deviation (σ_I) against Inclusive Graphic Skewness (Sk_I)	25
2.3.4. Linear discrimination of Sahu (1964)	25
CHAPTER THREE: ECONOMIC HEAVY MINERALS	29
3.1. Distribution and evaluation of the economic heavy minerals and their reserves.	29
3.1.1. Introduction.	29
3.1.2. Heavy medium separation.	29
3.1.3. Reserves of the economic heavy minerals.	41
3.1.3.1. The separation and calculation of magnetite content.	41
3.1.3.2. Magnetic fractionation	41
3.1.3.3. Microscopic examination.	43
3.1.4. Estimation of the economic mineral reserves.	46
3.2. Mineralogy	49
3.2.1. Titanium bearing minerals	49
3.2.1.1. Ilmenite	49
3.2.1.2. Leucoxene	68
3.2.1.3. Rutile	75
3.2.2. Magnetite.	80
3.2.3. Garnet	89
3.2.4. Zircon	93
3.2.5. Monazite	93
CHAPTER FOUR : BENEFICIATION OF THE ECONOMIC BEACH MINERALS	99
4.1. METHODOLOGY.	99
4.1.1. Gravity Concentration	99
4.1.1.1. Flowing-film concentration	100

4.1.1.2. Wet tabling.	101
4.1.1.2.1 Operation of the shaking table	103
4.1.2. Magnetic Separation.	104
4.1.2.1. Introduction.	104
4.1.2.2. Types of magnetic separators	105
4.1.2.2.1. Low-intensity magnetic separators	106
4.1.2.2.2. High-intensity magnetic separators	107
4.1.3. Electrostatic Separation Technique	108
4.1.3.1. Mechanisms of Particle Charging	109
4.1.3.1.1. Corona charging (Ion bombardment charging)	109
4.1.3.1.2. Induction charging (conductive-induction charging)	112
4.1.3.1.3. Tribocharging (Frictional charging)	113
4.1.3.2. Types of electrostatic separators	114
4.1.3.2.1. The roll-type electrostatic separator	115
4.1.3.2.1.1 Variables affecting the separation in the roll-type separators	118
4.1.4. DC- Electrical characteristics	120
4.1.4.1 Conductivity cell description	120
4.1.4.1. Computational method	120
4.1.4.2. DC- Electrical measurements	122
4.1.5. AC- Electrical characteristics	124
4.1.5. 1. R-C-L meter	124
4.2. EXPERIMENTAL WORKS.	128
4.2.1. General	128
4.2.2. Preparation of the technological sample	129
4.2.3. Separation of the light gangue minerals	129
4.2.4. Magnetic separation	132
4.2.5. Separation and upgrading of both ilmenite and garnet concentrates	136
4.2.6. Concentration and upgrading of rutile.	140
4.2.7. Upgrading of zircon	143
CHAPTER FIVE: SUMMARY AND CONCLUSION	149
REFERENCES	155
ARABIC SUMMARY	162

List of Figures

Fig. No.		page
1	Location map of El Kharrouba area.	2
2	Topographic map of El Kharrouba area.	11
3	Ripple marks on the sand dunes surfaces exhibiting the concentration of the heavy minerals in their truffs.	12
4	Dark and light coloured laminae in a trench.	12
5	Sampling pattern in El Kharrouba area.	13
6	Histograms of the grain size distribution of the studied samples in El Kharrouba area.	16
7	Cumulative curves of the grain size analyses of the studied samples in El Kharrouba area.	18
8	Contour map representing the variation in the graphic mean (Mz) in El Kharrouba area.	19
9	Variation of textural parameters.	26
10	Histograms showing the distribution of the heavy bromoform mineral percentages (sp.gr.>2.81gm/cm ³) in the different size fractions in each profile.	32
11	Isoconcentration map of the total heavy mineral percentages (sp.gr.>2.81gm/cm ³) in El Kharrouba area.	35
12	Histograms showing the distribution of the heavy clerici mineral percentages (sp.gr.>4.01 gm/cm ³) in the different size fractions in each profile.	38
13	Isoconcentration map of the total economic mineral percentages (sp.gr.>4.01gm/cm ³) in El Kharrouba area.	40
14	Photo showing Frantz Isodynamic Magnetic Separator.	42
15	Histograms showing the magnetic fractionation of the heavy clerici economic minerals.	44
16	Blocks pattern in El Kharrouba area.	47
17	Photomicrograph of ilmenite mineral grains showing their variability in grain habit.	50
18	Bar diagram of the grain size distribution of ilmenite.	51

19	Photomicrograph of a polished surface showing hematite-ilmenite exsolution intergrowths.	53
20	Photomicrograph of a polished surface of ilmenite grain showing specks and seriate exsolution intergrowths of hematite exhibiting the mottled texture.	53
21	Two photomicrographs of a polished surface showing hematite-ilmenite intergrowths.	54
22	Photomicrograph of a polished surface showing hematite-ilmenite intergrowths with the presence of nonreflecting lamellae. P.P.L.	55
23	Photomicrograph of a polished surface showing ilmenite-hematite intergrowths.	55
24	Photomicrograph of a polished surface of alternating hematite-ilmenite intergrowths of equal dimensions.	57
25	Photomicrograph of a polished surface of twinned hematite grains intergrown by ilmenite.	57
26	Photomicrograph of a polished surface showing linear intergrowths of titanomagnetite in ilmenite.	58
27	Photomicrograph of a polished surface showing irregular intergrowths of titanomagnetite in ilmenite.	58
28	Photomicrograph of a polished surface showing an early stage of leucoxenation of ilmenite along its (0001) plane.	61
29	Photomicrograph of a polished surface showing an advanced stage of alteration of ilmenite.	61
30	Photomicrograph of a polished surface showing the replacement of ilmenite by sphene.	62
31	Backscattered SEM Photos of some ilmenite grains, with the analysed spots on each photo.	63
32	X-ray diffraction pattern of ilmenite-1.	66
33	X-ray diffraction pattern of ilmenite-2.	67
34	Photomicrograph of some leucoxene grains showing different colours and shapes. Rough pitting and caves are common.	70
