Accuracy of Different Impression Techniques for Dental Implants

Thesis

Submitted to the Faculty of
Oral & Dental Medicine, Cairo University
in partial fulfillment of the requirements
for the Master Degree in Prosthodontics

By
Mohammed Farouk Abd Alla
B. D. S. (Cairo)

Prof. Dr. Khaled A. Zekry

Professor of Prosthodontics
Faculty of Oral & Dental Medicine
Cairo University

Prof. Dr. Adel M. El-Khodary

Professor and Head of Biomaterials Dept.
Faculty of Oral & Dental Medicine
Cairo University

Prof. Dr. Hoda A. Mokie El-Din

Professor of Prosthodontics
Faculty of Oral and Dental Medicine
Cairo University

وَيَا أَيُّهَا الَّذِينَ آمَنُوا اتَّقُوا اللَّهَ حَقَّ تَقَاتِهِ لَعَلَّكُمْ تُفْلِحُونَ

Acknowledgement

Words will never be enough to express how I am deeply thankful to ALLAH. It was his blessings that made this work be accomplished.

I would like to express my grateful appreciation and sincere gratitude to Prof. Dr. Khaled A. Zekry, Professor of Prosthodontics, Faculty of Oral and Dental Medicine, Cairo University, for his valuable suggestions on the subject, kind help and support, constant encouragement, unselfish advice and unyielding guidance throughout the work.

I would like also to express my deepest thanks and appreciation to Prof. Dr. Adel M. El-Khodary, Professor and Head of Biomaterial Department, Faculty of Oral and Dental Medicine, Cairo University, for his continuous help and cooperation, valuable suggestions and guidance.

I Would like to express my deepest admiration and indebtness to Prof. Dr. Hoda A. Mohie El-Din, Professor of Prosthodontics, Faculty of Oral and Dental Medicine, Cairo University for her intensive cosupervision, kind and gentle help in all phases of this thesis.

My deep gratitude also extends to Dr. Enas El-Attar, professor of Biostatistics, National cancer Institute, Cairo University, Dr. Ashraf Taher, associate lecturer of Fixed Prosthodontics, Faculty of Oral and Dental Medicine, Cairo University, Dr. Nihal Abu Rayah, associate Lecturer of Biomaterials, Faculty of Oral and Dental Medicine, Cairo University and Mr. Fathy El-Ghamry, senior technician of Prosthodontics, Faculty of Oral and Dental Medicine, Cairo University, Drs. Ahmed Rabah, Seham Sabra and my dear friend Dr. Ehab Abul Roos, Lecturer of Prosthodontics, Faculty of Oral and Dental Medicine, Cairo University, for working day and night to make all facilities possible to carry this work forward.

I Will also be forever indebted to my uncle Dr. M.A. Marzouk, Emeritus Professor, Washington University, St. Louis, which without him, this study would not be completed.

I send my deepest regards and appreciation to the generosity of Paragon Implant company, Core Vent, Las Vegas, Nevada, USA, for granting me the materials used in this study.

To all those who stood beside me and empowered me with advice and care, my friends and colleagues.

Mohammed Farouk Abd Alla

To

My Father, my idol

My Mother, my sanctuary

and

My Wife, my sweetheart

Table of Contents

	<i>Page</i>
* Introduction	1
* Review of Literature	2
• Implant definition	3
• Classification of dental implants	3
• Classification of root form implants	6
- According to design	6
- According to material	8
- According to surface characteristics	8
- According to time of implant installation	8
- According to manner of insertion	9
- According to the surgical stage	10
- According to mode of attachment between implant & bone	10
• Osseointegration	11
• Requirements of achieving proper osseointegration	12
• Implant components	13
• Implant abutment	13
• Other implant components	17
• Types of implant prosthesis	17
• Criteria of success of dental implants	18
• Impression materials & techniques	22
- Impression materials	25
- Impression techniques	27
• Methods used for measuring dimensional changes of different dental materials	30
* Aim of the Study	33
* Materials & Methods	34
* Results	60
* Discussion	67
* Summary & Conclusions	74
* Bibliography	76
* Arabic Summary	

LIST OF TABLES

	<i>Page</i>
Table 1 : Comparison between impression of implant heads and master cast average measurements with standard deviation	62
Table 2 : Comparison between closed tray (indirect) technique and master cast in means and Standard deviation	63
Table 3 : Comparison between direct unsplinted technique and master cast average measurements with standard deviation	64
Table 4 : Comparison between direct splinted technique and master cast average measurements with standard deviation	65
Table 5 : Comparison between all impression techniques and master cast average measurements with standard deviation	66

LIST OF FIGURES

	<i>Page</i>
Fig. 1 : Acrylic master model, with 4 implant analogues in place and 3 acrylic stoppers for the tray	36
Fig. 2 : Metal stock tray, placed on master model	36
Fig. 3 : Impression taking of master model without transfer copings (Imp. of implant heads)	38
Fig. 4 : Impression of implant heads after removal	38
Fig. 5 : Acrylic master model, with transfer copings in place	40
Fig. 6 : Impression of transfer copings after removal (indirect technique)	40
Fig. 7 : Transfer coping and analogue; a) Separate, b) Connected	42
Fig. 8 : Placement of transfer copings and implant analogues in the impression	42
Fig. 9 : Impression pins added to the transfer copings	44
Fig. 10 : Opening the tray occlusally for the use in the direct impression techniques	44
Fig. 11 : Tray placed with impression pins extending beyond the occlusal surface of the tray	45

Fig. 12	: Wax placed in the tray to prevent extrusion of impression material	45
Fig. 13	: Syringing of the impression material around the transfer copings	46
Fig. 14	: After setting of the impression material, the impression pins are unscrewed	46
Fig. 15	: After removal of the impression, the transfer copings are picked-up in the impression	48
Fig. 16	: Transfer coping with impression pin; a) Separate b) Connected to analogue	48
Fig. 17	: Implant analogues are attached and impression is ready to be poured with improved stone	49
Fig. 18	: Dental floss was used to connect all transfer copings together (front view)	51
Fig. 19	: Dental floss was used to connect all transfer copings together (top view)	51
Fig. 20	: Duralay acrylic material	52
Fig. 21	: Duralay acrylic applied to act as a stent splinting the transfer copings together	52
Fig. 22	: The tray with occlusal wax is tried first	53
Fig. 23	: Syringing of impression material around transfer copings	55
Fig. 24	: The impression on the master cast before removal	55
Fig. 25	: 4 stone casts; each representing corresponding impression technique	56
Fig. 26	: Traveling microscope	58
Fig. 27	: Measuring the cast with the traveling microscope guided by the triangular ruler	58
Fig. 28	: Diagram showing the reference points and linear measurements taken	59
Fig. 29	: Comparison between impression of implant heads and master cast average measurements with standard deviation	62
Fig. 30	: Comparison between closed tray (indirect) technique and master cast in average measurements with standard deviation	63
Fig. 31	: Comparison between direct unsplinted technique and master cast average measurements with standard deviation	64
Fig. 32	: Comparison between direct splinted technique and master cast average measurements with standard deviation	65
Fig. 33	: Comparison between all impression techniques and master cast average measurements with standard deviation	66
