The Soul of

My dear

Father

Acknowledgement

Thanks to God, who made me able to accomplish this work.

I am especially grateful to **Prof. Dr. Zakia Toma Toama**, Professor of community Health Nursing, Faculty of Nursing, Alexandria University, for her sincere supervision and kind advice. With her valuable support and continuous effort, this work has been accomplished.

With considerable appreciation, I express my great indebtedness to **Prof. Dr. Mohamed Ibrahim Kamel**, Professor of Community Medicine, Faculty of Medicine, Alexandria University, for his authentic guidance and magnificent help to make this thesis in its best possible shape and content.

I would like to express my sincere gratitude to **Dr. Nadia Mahmoud**, Assistant Professor of community Health Nursing, Faculty of Nursing, Alexandria University, for her continuous help, constant guidance and valuable suggestions during the work of the thesis.

Finally, my deeply grateful and thanks to all who contributed by giving their time and cooperation towards the fulfilment of this work.

Contents

<u>Chapter</u>		<u>Page</u>
I	Introduction	1
	- Characteristics of school age	2
	- Injury as a public health problem	3
	- School injuries	8
	- Epidemiology of school injuries	10
	- Safety	11
	- Injury prevention	14
	- School safety program	17
	- School health program	18
	- Healthful school environment	21
	- Role of school team	28
	- The role of teacher	31
	- Role of school nurse	33
II	Aims of the study.....	43
III	Material and Methods.....	
	- Material.....	44
	- Methods.....	48
IV	Results.....	54
	- Assessment of school environment in both study and control group	55
	- Knowledge and practice of school nurses about school safety in both study and control group in the assessment phase and last follow up phase	65
	- Knowledge and practice of school teachers and social workers about school safety in both study and control group in the assessment phase and last follow up phase	85
	- Injury epidemiological pattern in both study and control group in the assessment phase and evaluation phase	100
	- Effect of safety promotion program on the knowledge of nurses and teachers and social workers.	135

V	Discussion.....	141
VI	Conclusion & Recommendations.....	164
	- Conclusion.....	164
	- Recommendations.....	166
VII	Summary... ..	171

	Appendices.....	
	Arabic summary	

List of tables

Table	Title	page
I	Distribution of schools according to their characteristics and surrounding environment in both study and control group	58
II	Distribution of schools according to the playground environment in both study and control group	59
III	Distribution of schools according to the school building environment in both study and control group	60
IV	Distribution of schools according to the classroom environment of both study and control group	61
V	Distribution of studied schools according to the toilet room environment in both study and control group	62
VI	Distribution of studied schools according to the availability of environmental safety measures in both study and control group	63
VII	Distribution of the studied schools according to availability of safety materials in school clinics	64
VIII	Distribution of nurses in both study and control group according to their personal characteristics	72
IX	Distribution of nurses in both study and control group according to their training experience	73
X	Distribution of nurses in both study and control group according to their knowledge about personal risk factors of school injury during assessment and last follow up phase	74
XI	Distribution of nurses in both study and control group according to their knowledge about environmental risk factors of school injury during assessment and last follow up phase	75
XII	Distribution of nurses in both study and control group according to their knowledge about administrative risk factors of school injury during assessment and last follow up phase	76
XIII	Distribution of school nurses according to their practice regarding school safety during assessment and last follow up phase	77-79
XIV	Role of school nurse related to school safety as perceived by the studied and control group during the assessment and the last follow up phase	80
XV	School nurses suggestions for promotion of school safety in both study and control group in the assessment and the last follow up phase	81
XVI	the actual safety activities done in the studied schools as reported by school nurses during the assessment and the last follow up phase	82-83
XVII	the actual safety health education done in the studied schools as reported by school nurses during the assessment and the last follow up phase	84

Table	Title	page
XVIII	Distribution of teachers and social workers in both study and control group according to their personal characteristics and training	91
XIX	Distribution of teachers and social workers in both study and control group according to their knowledge about personal risk factors of school injury during assessment and last follow up phase	92
XX	Distribution of teachers and social workers in both study and control group according to their knowledge about environmental risk factors of school injury during assessment and last follow up phase	93
XXI	Distribution of teachers and social workers in both study and control group according to their knowledge about administrative risk factors of school injury during assessment and last follow up phase	94
XXII	Distribution of school teachers and social workers according to their practice regarding school safety during assessment and last follow up phase	95
XXIII	Role of school teachers and social workers related to school safety as perceived by the studied and control group during the assessment and last follow up phase	96
XXIV	Suggestions of school teachers and social workers for the promotion of school safety in both study and control group in the assessment and last follow up phase	97
XXV	Actual safety management at the studied schools as reported by teachers and social workers during the assessment and the last follow up phase	98
XXVI	The actual safety health education done in the studied schools as reported by teachers and social workers in the studied schools during the assessment and the last follow up phase	99
XXVII	Distribution of injured students by gender during the assessment and evaluation phase in both study and control group	110
XXVIII	Distribution of injured students by grade of education during the assessment and evaluation phase in both study and control group	111
XXIX	Distribution of injured students by day of week of injury during the assessment and evaluation phase in both study and control group	119
XXIX	Distribution of injured students by month of occurrence of injury during the assessment and evaluation phase in both study and control group	120
XXXI	Distribution of injured students by place of injury during the	121

	assessment and evaluation phase in both study and control group	
XXXII	Distribution of injured students by pattern of injury during the assessment and evaluation phase in both study and control group	122
XXXIII	Distribution of injured students by nature of injury during the assessment and evaluation phase in both study and control group	123
XXXIV	Distribution of injured students by affected body parts during the assessment and evaluation phase in both study and control group	124
XXXV	Distribution of injured students by injury side during the assessment and evaluation phase in both study and control group	125
XXXVI	Distribution of injured students by management during the assessment and evaluation phase in both case and control group	126
XXXVII	Distribution of injured students by gender and place of injury in the study group in both the assessment and evaluation phase	127
XXXVIII	Distribution of injured students by gender and pattern of injury in the study group in both the assessment and evaluation phase	128
XXXIX	Distribution of injured students by gender and nature of injury in the study group in both the assessment and evaluation phase	129
XXXX	Distribution of injured students by gender and affected body parts in the study group in both the assessment and evaluation phase	130
XXXXI	Distribution of injured students by academic year and place of injury in the study group in both the assessment and evaluation phase	131
XXXXII	Distribution of injured students by academic year and pattern of injury in the study group in both the assessment and evaluation phase	132
XXXXIII	Distribution of injured students by academic year and nature of injury in the study group in both the assessment and evaluation phase	133
XXXXIV	Distribution of injured students by academic year and affected body parts in the study group in both the assessment and evaluation phase	134
XXXXV	Distribution of nurses of the studied group according to their knowledge about school safety pre and post safety training program	137
XXXXVI	Distribution of teachers and social workers of the studied group according to their knowledge about school safety pre and post safety training program	138
XXXXVII	Distribution of nurses of the studied group according to their opinion about the safety training program	139
XXXXVIII	Distribution of teachers and social workers of the studied group according to their opinion about the safety training program	140
