## List of Abbreviations

(g/l).....	Gram per Litre
2'5'OAS .....	2'5'-Oligoadenylate Synthetase
AFP.....	Alpha Feto Protein
ALT .....	Alanine Aminotransferase
ALT .....	Alanine Aminotransferase
APRI .....	Aspartate Aminotransferase to Platelet Ratio Index
ARFI .....	Acoustic Radiation Force Impulse
AST .....	Aspartate Aminotransferase
BMI .....	Body Mass Index
CDC .....	Centers for Disease Control and Prevention
CHC .....	Chronic Hepatitis C
CLD.....	Chronic Liver Disease.
CLIA.....	Clinical Laboratory Improvement Amendments
CRP.....	C Reactive Protein
CTGF .....	Connective Tissue Growth Factor
CTP .....	Child-Turcotte-Pugh Classification System
CYP .....	Cytochrome P450
DAAs .....	Direct Antiviral Agents
DNA.....	Deoxyribnucleic Acid
E proteins.....	Envelope glycoproteins
EASL.....	European Assosiation for the Study of the Liver
EIA or ELIZA.....	Enzyme Linked Immunosorbent Assay
ER .....	Endoplasmic Reticulum
ESRD.....	End Stage Renal Disease
ETR .....	End of Treatment Response
EVR .....	Early Virologic Response

**FFP .....Fresh Frozen Plasma**  
**GE/mL..... Genome Equivalents per Milliliter**  
**GFR..... Glomerular Filtration Rate**  
**GGT.....  $\gamma$  Glutamyl Transferase**  
**HA .....Hyaluronic Acid**  
**HA.....Hyaluronic Acid**  
**HAV.....Hepatitis A Virus**  
**HBV .....Hepatitis B Virus**  
**HBV.....Hepatitis Bvirus**  
**HCC ..... Hepatocellular Carcinoma**  
**HCV Ab .....Hepatitis C Virus Antibody**  
**HCV RNA..... Hepatitis C Virus Ribonucleic Acid**  
**HCV ..... Hepatitis C Virus**  
**HCV.....Core Antigen (CAg)**  
**HCV-Ag..... Hepatitis C virus Antigen**  
**HIV ..... Human Immunodeficiency Virus**  
**HSC .....Hepatic Stellate Cells**  
**HVR .....Hypervariable Regions**  
**INR..... International Normalized Ratio**  
**IRES .....Internal ribosome entry site**  
**ISGF3.....IFN-Stimulated Gene Factor 3**  
**ISGs .....IFN-Stimulated Genes**  
**Jak/STAT.....Janus Kinase/Signal Transducers and Activators of**  
**Transcription**  
**LDL.....Low Density Lipoprotein**  
**LFTs .....Liver Function Tests**  
**MC .....Mixed Cryoglobulinemia**  
**MFAP-4.....Microfibril-Associated Glycoprotein 4**

**mmol/l..... Millimoles per Litre**  
**MRE .....Magnetic Resonance Elastography**  
**NAAT .....Nucleic Acid Amplification Test**  
**NAT .....Nucleic Acid Test**  
**NCCVH .....National Committee for Control of Viral Hepatitis**  
**NCCVH.....National Committee for the Control of Viral Hepatitis**  
**NPIs .....Nucleoside Polymerase Inhibitors**  
**NPV.....Negative Predictive Value**  
**NSP..... Non Structural Proteins**  
**OCI..... Occult Hepatitis C Virus Infection**  
**PBMCs .....Peripheral Blood Mononuclear Cells**  
**PCR.....Polymerase Chain Reaction**  
**Peg IFN .....Pegylated Interferon**  
**PGA.....Prothrombin Index, Gamma Glutamyltransferaset,**  
**Apolipoprotein A1**  
**P-gp .....P-glycoprotein**  
**PICP .....Procollagen Type I Carboxy Terminal Peptide**  
**PIIINP .....Procollagen Type III Amino-Terminal Peptide**  
**PIs .....Protease Inhibitors**  
**PPV.....Positive Predictive Value**  
**PT..... Prothrombin Time**  
**PTT.....Partial Thromboplastin Time**  
**PWIDs..... People Who Inject Drugs**  
**RBV .....Ribavirin**  
**RdRp.....RNA Dependent RNA Polymerase**  
**RIBA .....Recombinant immunoblot assays**  
**RT-PCR..... Real-Time Polymerase Chain Reaction**  
**RT-PCR..... Reversr Transcription Polymerase Chain Reaction**

**RVR .....Rapid Virological Response**  
**SD.....Standard Deviation**  
**SHEA .....Society for Healthcare Epidemiology of America**  
**SR-B1.....Scavenger Receptor Class B Type 1**  
**SVR .....Sustained Virologic Response**  
**TGF- $\beta$ 1.....Transforming Growth Factor- $\beta$ 1**  
**Th1.....T Helper 1 Cells**  
**TIMP-1.....Tissue Inhibitor of Metalloproteinases**  
**TIMPs .....Tissue Inhibitors of Matrix Metalloproteinases**  
**TMA .....Transcription-Mediated Amplification**  
**TMDs .....Two Transmembrane Domains**  
**VCTE .....Vibration Controlled Transient Elastography**  
**WHO ..... World Health Organization**

## **ABSTRACT**

**Background:.** Hepatitis C virus (HCV) is a major public health problem throughout the world. Acute HCV infection is asymptomatic in most cases, and only 15% of cases are symptomatic, but Chronic hepatitis C (CHC) shows a variable clinical course, ranging from mild histopathological changes to active hepatitis and the development of hepatic fibrosis, cirrhosis and HCC. The aim of this work is to detect accuracy of core antigen in Egyptian cirrhotic patients with HCV Infection treated with combination therapy of Sofosbuvir, Daclatasvir and Ribavirin as an alternative to PCR.

**Patients and methods:** The study included 20 Egyptian treatment-naïve chronic hepatitis C patients with cirrhosis (Cirrhosis was diagnosed on ultrasound basis) on Sofosbuvir, Daclatasvir and Ribavirin. Results Treatment with sofosbuvir plus Daclatasvir and Ribavirin for 12 weeks resulted in undetectable HCV RNA by PCR in 95% (19/20) of the patients at the end of treatment and only 5% (1/20) of the patients achieved SVR after 6 months not 3 (both HCV RNA AND HCV Core Antigen tests were negative for all patients).

**Conclusion:** In our study there was a correlation between HCV RNA and HCV core antigen results, so HCV core antigen can be used as an alternative marker to HCV RNA in treatment of HCV infected cirrhotic patients receiving Sofosbuvir, Daclatasvir and Ribavirin during treatment and for monitoring its efficacy.

---

**Key words:** HCV, Acte HCV, HCV RNA, PCR, HCV Core Antigen, Chronic HCV.

## Introduction

Hepatitis C virus (HCV) is a major public health problem throughout the world, **(Kazuaki et al., 2016)**. Disease progression after HCV infection depends on several factors like gender, co infection with HIV, alcohol consumption, and duration of chronic infection **(Hajarizadeh, Grebely & Dore, 2013)**.

Acute HCV infection is asymptomatic in most cases, and only 15% of cases are symptomatic with symptoms such as fatigue, nausea, joint pain or signs of liver damage (jaundice and increased liver enzymes). The majority of adults develop chronic infection (55–85%), with 15–45% resolving infection within the first six months. Chronic hepatitis C (CHC) shows a variable clinical course, ranging from mild histopathological changes to active hepatitis and the development of hepatic fibrosis, cirrhosis and HCC. **(Marc, et al., 2017)**

There are estimated to be at least 185 million HCV carriers worldwide, **(Kazuaki et al., 2016)**. It has been reported that about 350,000 to 500,000 people die each year due to HCV related chronic liver disease such as liver cirrhosis or HCC **(WHO 2016)**.

Hepatitis C viral infection is endemic in Egypt with the highest prevalence rate in the world **(Elgharably, et al., 2016)**

With the ultimate goal of achieving a more potent strategy to control transmission of HCV in Egypt, The Ministry of Health has set up 32 specialized centers for the nationwide therapy of HCV infection. The prevalence of HCV in adults decreases (7%) **(WHO, 2015)**.

Screening for HCV antibody (HCV Ab) facilitates HCV surveillance in the

community (**Morisco et al., 2016**).

In the case of suspected acute hepatitis C or in immunocompromised patients, HCV RNA testing should be part of the initial evaluation. If anti\_HCV antibodies are detected, HCV RNA should be determined by a sensitive molecular method. HCV core antigen is a surrogate marker of HCV replication and can be used instead of HCV RNA to diagnose acute or chronic infection when HCV RNA assays are not available or not affordable (core antigen assays are slightly less sensitive than HCV RNA assays for detection of viral replication) (**EASL Recommendations on Hepatitis C Virus treatment, 2016**).

New era for management of chronic HCV using direct antiviral agents (DAAs) started in 2013. DAAs are molecules that target specific nonstructural proteins of the virus and results in disruption of viral replication and infection. There are four classes of DAAs, all are nonstructural proteins 3/4A(NS3/4A) protease inhibitors (PIs) (**e.g. simeprevir, Paritaprevir, Grazoprevir**), NS5B nucleoside polymerase inhibitors (NPIs) ( **e.g. sofosbuvir**), NS5B non-nucleoside polymerase inhibitors (**e.g. Dasabuvir**) and NS5A inhibitors (**e.g., Daclatasvir, Ledipasvir, Ombitasvir, Elbasvir**) (**Poordad et al., 2012**).

Testing for HCV core antigen presents a more attractive alternative owing to the lower cost and short turnaround time. HCV core antigen has been shown to be an indirect marker for HCV replication comparable to the detection of HCV RNA (**Florea et al., 2014**).
