Engineer's Name: Mohamed Gamil Elsayed Megahed
Date of Birth: 1/1/1983
Nationality: Egyptian
E-mail: gamel1983@yahoo.com
Phone: 0122/7004784
Address: Mina-Elkameh, Sharkia, Egypt
Registration Date: 01/10/2010
Awarding Date: / /
Degree: Doctor of Philosophy
Department: Structural Engineering

Supervisors: Prof. Dr. Nabil A. B. Yehia

Examiners: Prof. Dr. Ahmed Sherif Essway (*Professor of RC Structures – Faculty of Engineering, Ain Shams University*)
Prof. Dr. Wahba Wahba El-Tahan
Prof. Dr. Nabil A. B. Yehia

Title of Thesis:

Size Effect on Shear Strength of Normal and Wide Beams With Normal and High Strength Concrete

Key Words:

shear strength; concrete beams; size effect.

Summary:

The main objective of this research was to investigate to what extent the beam depth, width, longitudinal reinforcement ratio and concrete compressive strength, influence the ultimate shear capacity of reinforced concrete beams without transverse reinforcement. An experimental program was undertaken to study these parameters and to evaluate the empirical formula of the current Egyptian Code of practice (ECP 203-2017) [1] for calculating shear strength of concrete beams. The experimental program was performed for eighteen beams with variables depths; 125, 250, 350, and 600 mm. The concrete cube compressive strength varied from 25 MPa. To 87.5 MPa. The longitudinal reinforcement ratio varied from .8 % to 1.2%. The tested beams had constant clear span to effective depth ratio ($l/d=6$). It was found that the shear strength of beams decreases as the beam effective depth increases, and as longitudinal reinforcement ratio decreases. The ultimate load of the tested specimens was verified analytically using a finite element program “ABAQUS 6.13”, and the obtained predictions gave a good agreement with the experimental results. A parametric study was performed using the same finite element program to estimate the ultimate shear capacity of various depths of beams.

Disclaimer

I hereby declare that this thesis is my original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

Acknowledgement

The author wishes to express his sincere appreciation and gratitude to **Dr. Nabil A. B. Yehia**, Professor of RC Structures, Cairo University, for his continuous supervision of this work, help, advice and guidance through the research program.

Special thanks are due to **Dr. Mohamed Morsy Abd El-Ghaffar Salem**, Teacher of RC Structures, Housing and Building National Research Center for his great help and technical support during the conduction of this work. Moreover, gratitude is due to **Dr. Sherif Elzeny**, Professor of RC Structures, Housing and Building National Research Center, for his helpfulness and self-denial.

Last, but not least, the author thanks his family for their encouragement and prayers, and dedicates his work to the soul of his father.
