2018

Detection of Prenatal Abnormal Chromosomal Syndrome among Pregnant Women with High Risk of Birth Defect during the First Trimester

Submitted By

Zouhoor Mohamed Elbaz

For the Fulfilment of

Ph.D. Degree in Sciences (Biochemistry)

Under the Supervision of

Prof. Magdy Mahmoud

Professor of Biochemistry

Biochemistry Department

Faculty of Science

Ain Shams University

Dr. Osamma Kamal Zaki

Consultant and director of the unit of children inherit

Faculty of Medicine

Ain Shams University

Prof. Palat Krishna Menon

Professor Research and Director of Center of Advanced biomedical research and innovation , Gulf Medical University Ajman, UAE

Dr. Manjunath Nimmakayalu

Specialist, Cytogenetics and Molecular Biology, Center for Biomedical research and Innovation, Gulf Medical University, Ajman, UAE

Faculty of Science

Ain Shams University

2018

ACKNOWLEDGMENT

First and foremost thanks to **ALLAH** who gives me the power to go forward in a way illuminated with his merciful guidance.

No words can express my profound thanks and deep gratitude to **Prof. Magdy Mahmoud** for constructive guidance and his continuous efforts and facilities he offered throughout his supervision. I am also thankful to him for his continuous support faithful advice and continuous encouragement during the execution of the experimental work. It is an honour to me that he is my supervisor and I will never forget his valuable supervision.

I would like to express my thanks and gratitude to **Dr. Osamma Kamal Zaki** for his sincere constructive help and valuable contribution throughout the work and for suggesting several important improvements in the manuscript of the thesis and for sustained encouragement continuous support grate assistance and kind supervision.

I express my appreciation to **Prof. Palat Krishna Menon** for his keen supervision help skilful cooperation and sincere thanks and appreciation the kind help afforded by **Dr. Manjunath Nimmakayalu** I wish to thank him for his continues help warm encouragements and facilities offered by him throughout the work.

My thanks are due to my sincere colleagues for their respectable dealing and sincere cooperation.

DEDICATION

TO MY FAMILY

**SPECIAL DEDICATION TO ALL MY FAMILY ESPECIALLY FOR
MY HUSBAND MR. SAYED SELIM FOR HIS CONTINUED
SUPPORT AND ENCOURAGEMENT THROUGHOUT MY WORK
JOURNEY**

Abstract	
Introduction	1
Aim of work	6
Review of Literature	7
1- Chromosomal Anomalies	7
1.1- Numerical Aberration	7
1.2- Structural Aberrations	8
2- Risk factors for chromosomal anomalies	10
2.1- Advanced maternal Age	10
2.2- Recurrent risk and family history (miscarriage)	11
2.3- Maternal weight	12
2.4- Smoking	14
2.5- History of Diabetes Mellitus	15
2.6- Multiple pregnancy (Twine or more)	16
3- Noninvasive prenatal screening for chromosomal anomalies	18
3.1- History of prenatal screening	18
3.2- Combined First trimester screening	22
3.2.1- Pregnancy Associated Plasma Protein- A	23
3.2.2- free Human Chorionic Gonadotropin	25
3.2.3- Nuchal Translucency	26

3.3- Antenatal screening using placental growth factor with combined first trimester	28
3.3.1- Placental Growth Factor	28
3.3.1.1- Placental Growth Factor Expression	30
3.3.1.2- Role of PlGF in angiogenesis	31
3.3.1.3 Biological aspect of Placental Growth Factor	32
4- Prenatal Diagnosis for chromosomal anomalies	34
4.1- BACs on beads Technology	35
4.1.1- Down syndrome (T21)	37
4.1.2- Edwards's Syndrome (T18)	39
4.1.3- Patau Syndrome (T13)	40
4.1.4- XYY Syndrome (47, XYY)	41
4.1.5- Angelman Syndrome (chr 15q11.2-q13)	42
4.1.6- DiGeorge Syndrome (Chr 22q11.2)	43
4.1.7- Williams- Beuren Syndrome (chr 7q11.23)	44
Subjects and Methods	46
Part 1: Prenatal diagnosis of chromosomal anomalies	46
Specimen collection	46
Laboratory investigation, Biochemical Markers:	47
1- Pregnancy-associated plasma protein A	47
2- Freeβsubunit of Human Chorionic Gonadotropin	49
Sonographic Data	50
PRISCA software	51

3- Placental Growth Factor	58
Part 2: Prenatal Genetic testing	59
5- G banding karyotype	59
6- Fluorescence in-situ hybridization	60
DNA Extraction:	61
7- Prenatal BOBs	61
8- Affymetrix Microarray (cytoscan optima)	66
Results	72
1- Prenatal Screening test for chromosomal anomalies	72
2- Genetic testing for prenatal diagnosis of chromosomal abnormalities	83
DISCUSSION	113
1- Prenatal screening	113
2- Prenatal diagnosis	137
REFERENCE	147
Summary	174

List of Tables

Reference Range of PAPP-A from 8 to 14 weeks of gestation	48
Reference range of free HCG in pregnant women	50
Impact of Increased Biochemical MoMs on Risk Calculations	57
Bacs on beads target regions	62-64
Distributions of all the study cases among the risk groups	72
Characteristics of the study groups in the screening population	74-75
List of positive cases and there descriptions	83-85
Microarray results of the case with Williams's syndrome with definite breakpoints with candidate genes.	97-98
Microarray results of the case no (9) with definite breakpoints with candidate genes	106
Microarray results of the case no (11) with definite breakpoints with candidate genes	110

List of Figures

Pregnancy associated plasma protein A or PAPP-A as a disulfide-bound homodimer in free form and as a heterotetrameric	24
Structure of intact hCG and h-CG beta	26
Nuchal translucency measurement	27
Molecular structure of PLGF protein	29
Schematic representation of binding properties of PLGF isoforms and PLGF/VEGF heterodimer	31
technique of prenatal BACs on Beads	36
The BAC PCR product DNA is attached to the polystyrene bead by coupling the amino end of the DNA to a carboxy group on the bead	37
The features of down syndrome among different stages of chromosome 21 abnormalities	38
the process flow of BACs on Beads technique	62
Process flow of cytoscan optima technique	71
Distributions of the study cases of the risk groups	73
Percentage of distribution of the study population	74
Comparison of maternal age at delivery with different risk groups	75
Comparison of maternal weight with different risk groups	76
Comparison of ethnic origin with different risk groups	76
Comparison of Diabetic cases with different risk groups	77
Comparison of NT value with different risk groups	78
Comparison of PAPP-A value with different risk groups	78

Comparison freeHCG value with different risk groups	79
Comparison of PLGF value with different risk groups	79
Correlation between PAPP-A and PLGF	82
Addition in chromosome 21 which indicate a case of trisomy 21 using BACs on Beads	86
Trisomy 21 using BACs on Beads	87
Confirmatory test for T21 using FISH assay	88
Addition in chromosome 18 which indicate a case of trisomy 18 using BACs on Beads	91
Sample (3) shows Trisomy 18 using BoBs assay	92
Confirmatory test for T18 using FISH assay	92
Confirmatory test for T13 using FISH assay	93
Sample (5) shows addition in chromosome Y which indicate a case of XYY using BACs on Beads	94
XYY using BoBs assay	95
Sample (6) shows deletion in 7q11.23 regain which indicate Williams syndrome using BACs on Bead	96

Microarray profile of the patient with William's syndrome showing accurate breakpoints - 7q11.23(72,718,277-74,141,746)x1	99
BOBs result shows deletion in 22q11.2 region representing Di George Syndrome	100
BOBs result shows deletion in 22q11.2 region representing Di George Syndrome	101
DGS shows normal with FISH using trisomy 21 and trisomy 13 probes	101
BOBs result shows deletion in 15q11.2-q13 critical region representing Angelman Syndrome	103
BOBs result shows deletion in 15q11.2-q13 critical region representing Angelman Syndrome	103
Normal case using BACs o Beads	104
normal using BOBs	105
Microarray results definite breakpoints with candidate genes	107
Microarray results shows specific genes for the definite breakpoints.	107
Microarray results definite breakpoints with candidate genes	108
Microarray results for case 11 (A)	111
Microarray results for case 11 (B)	112

ABBREVIATIONS AND SYMBOLS

aCGH	Array Comparative Genomic Hybridization
ACOG	American College Of Obstetrics And Gynaecology
ADAM12	Disintegrin And Metalloproteinase Domain-Containing Protein 12
AF	Amniotic Fluid
AMR	Analytical Measurement Range
AUTO	Autosomal prope
AS	Angelman Syndrome
BACs	Bacterial Artificial Chromosomes
BMI	Body Mass Index
BOBs	Bacterial Artificial Chromosomes On Beads
CFTS	Combined First Trimester Screening
CDC	Cri due Chat syndrome
Chr	Chromosome
CI	Confidence Intervals
CNVs	Copy Number Variants
CRL	Crown-Rump Length
CV	Coefficient Of Variation
CVs	Chorionic Villis
DGS	Digeorge Syndrome
DM I	Diabetes Mellitus, Type I
DM II	Diabetes Mellitus Type II
DS	Down Syndrome
eFTS	Enhanced First Trimester Screening
ES	Edwards Syndrome
EVTs	Extravillous Trophoblasts
FGR	Fetal Growth Restriction
FISH	Fluorescence In Situ Hybridization

FMF	Fetal Medicine Foundation
FP	False Positive
FPR	False Positive Rate
