

**"Marginal fit of zirconia-reinforced lithium
silicate laminate veneers with two thicknesses
using different CAD/CAM systems"**

Thesis

**Submitted for Partial Fulfillment of the Requirements
for the Master degree of Science in Fixed Prosthodontics,
Faculty of Dentistry, Ain Shams University**

Presented by

Manar Ahmed Mohamed Nour El-Mahdy

**B.D.S Faculty of Dentistry,
Ain Shams University
(2013)**

**Faculty of dentistry
Ain shams university
2019**

Supervisors

Dr. Marwa Mohamed Wahsh

**Assistant Professor of Fixed Prosthodontics Department,
Faculty of Dentistry,
Ain Shams University**

Dr. Ahmed Khaled Aboelfadl

**Assistant Professor of Fixed Prosthodontics Department,
Faculty of Dentistry,
Ain Shams University**

Dedication

*I wish to dedicate this work to my great parents,
my dear husband, whom I could never done
this without their love, support and encouragement*

Acknowledgement

*I wish to express my gratitude to **Dr. Marwa Mohamed Wahsh**, Assistant Professor of Fixed Prosthodontics, Faculty of Dentistry, Ain Shams University for her unlimited willingness for advice and guidance.*

*No word can express my sincere thanks and appreciation to **Dr. Ahmed Khaled Aboelfadl**, Assistant Professor of Fixed Prosthodontics Department, Faculty of Dentistry, for his help, support and encouragement.*

*Last but not least, deepest thanks to my dear professors, colleagues and staff members of Fixed Prosthodontics Department, Faculty of Dentistry, Ain Shams University, for their great support and cooperation. Special thanks to my dear friends **Dr. Marwa Mohamed Adel** and **Dr. Mohamed Samy** for their continued help.*

LIST OF FIGURES

Number	Title	Page
Figure (1)	: Different axes for milling machines	15
Figure (2)	: Celtra duo	29
Figure (3)	: (a)Mojo veneer cement, (b)ceramic etch, (c)ceramic primer	29
Figure (4)	: In Eos X5 scanner	30
Figure (5)	: InLab MCX5 milling machine	31
Figure (6)	: Ceramill motion 2 milling machine	31
Figure (7)	: InLab MCXL milling machine.....	32
Figure (8)	: A typodont (NISSIN, Japan)	34
Figure (9)	: Silicone putty index.....	34
Figure (10)	: Depth oriented grooves made by depth cutter stone	35
Figure (11)	: The finished preparation.....	36
Figure (12)	: Checking the temporary 0.5mm veneer thickness...	36
Figure (13)	: Verification of preparation amount using silicon index	37
Figure (14)	: The two components of epoxy resin.....	37
Figure (15)	: Epoxy resin die.....	38
Figure (16)	: Administration page for inLab 15 software	39
Figure (17)	: Selection of milling machine on the software.....	39
Figure (18)	: Material selection on the software.....	40
Figure (19)	: Scanning page for the software	40
Figure (20)	: Setting the model axis for the abutment.....	41

Number	Title	Page
Figure (21)	Drawing the restoration margin.....	41
Figure (22)	Defining the insertion axis	42
Figure (23)	Restoration parameter setting for 0.5 mm thickness laminate veneer.....	42
Figure (24)	Restoration parameter setting for 0.3 mm thickness laminate veneer.....	43
Figure (25)	Restoration adjustments	43
Figure (26)	Importing the design to CAM software.....	44
Figure (27)	Exporting the design to STL file	44
Figure (28)	Showing CAM software and selection of a new job.....	45
Figure (29)	Collection of the items that will be milled	45
Figure (30)	Selection of manufacturer, material and, block size.....	46
Figure (31)	Veneer positioning in the block on CAM software	47
Figure (32)	Sprue positioning in the middle of labial surface....	47
Figure (33)	Checking the instruments of milling machine.....	48
Figure (34)	Starting the production process	48
Figure (35)	Adjusting the restoration sprue for milling on Ceramill motion 2	49
Figure (36)	Showing the restoration in the block for milling using inLab MCXL	50
Figure (37)	The polishing kit	51

Number	Title	Page
Figure (38)	Hydrofluoric acid etching for the veneers fitting surface	51
Figure (39)	Rinsing of the hydrofluoric acid etch using oil free water spray	52
Figure (40)	Silane primer application on the fitting surface of the veneer	53
Figure (41)	Veneer cementation using finger pressure	53
Figure (42)	Final curing of the veneer.....	53
Figure (43)	The incisal margin under stereomicroscope.....	55
Figure (44)	The gingival margin under stereomicroscope	55
Figure (45)	The mesial margin under stereomicroscope.....	56
Figure (46)	The distal margin under stereomicroscope.....	56
Figure (47)	Bar chart showing average Marginal gap (μm) for different CAD/CAM systems and finish line thicknesses.....	58
Figure (48)	Bar chart showing average marginal gap (μm) for different CAD/CAM systems	60
Figure (49)	Bar chart showing average marginal gap (μm) for different finish line thicknesses	61
Figure (50)	Bar chart showing average marginal gap (μm) for different finish line thicknesses within each CAD/CAM system	63
Figure (51)	Bar chart showing average marginal gap (μm) for different CAD/CAM systems within each finish line thickness.....	63

LIST OF TABLES

Number	Title	Page
Table (1)	: The materials used.....	28
Table (2)	: Experimental factorial design.....	33
Table (3)	: Mean \pm standard deviation (SD) of marginal fit (μm) for different CAD/CAM systems and finish line thicknesses.....	58
Table (4)	: Effect of different variables and their interactions on marginal fit (μm)	59
Table (5)	Mean \pm standard deviation (SD) of marginal gap (μm) for different CAD/CAM systems and finish line thicknesses.....	60
Table (6)	Mean \pm standard deviation (SD) of marginal gap (μm) for different CAD/CAM systems and finish line thicknesses.....	61
Table (7)	: Mean \pm standard deviation (SD) of marginal gap (μm) for different CAD/CAM systems and finish line thicknesses.....	62
