HOSSAM MAGHRABY

The influence of locally delivered vitamin D₃ on alveolar ridge preservation after tooth extraction (a clinical, radiographic and histological evaluation)

Research thesis

Submitted in partial fulfillment of the requirements for master's degree
in Oral Medicine, Periodontology and Oral Diagnosis

By

Amr Ashraf Abdelghany El Araby

B.D.S. 2012 - University of Tanta

Supervisors

Prof. Dr. Hala Kamal Abd El Gaber

Professor of Oral Medicine, Periodontology and Oral Diagnosis
Faculty of Dentistry, Ain-Shams University

Dr. Ahmed Elsayed Hamed Amr

Lecturer of Oral Medicine, Periodontology and Oral Diagnosis
Faculty of Dentistry, Ain-Shams University

Ain-Shams University

2019

Acknowledgement

Thanks to "**Allah**" for providing me the strength and well to finish my work successfully.

I would like to express my deep gratitude to my dear supervisor **Prof. Dr. Hala Kamal Abd El Gaber** Professor of Oral Medicine, Periodontology and Oral Diagnosis Faculty of Dentistry Ain-Shams University for her continuous support, patience, motivation and encouragement in getting me through this work.

Very special thanks go to **Dr. Ahmed Elsayed Hamed Amr** Lecturer of Oral Medicine, Periodontology and Oral Diagnosis Faculty of Dentistry, Ain-Shams University for his supervision, advice and valuable scientific knowledge and constant support

Amr elaraby

List of Tables

No.	Table	Page
1	Descriptive statistics and comparison between baseline and 3 months within the same group regarding horizontal measures (width) for alveolar ridge by bone caliper (paired t test)	47
2	Descriptive statistics and comparison between control and test side regarding value of horizontal measures (width) for alveolar ridge by bone caliper (independent t test)	48
3	Descriptive statistics and comparison between control and test side regarding percent change of horizontal measures (width) for alveolar ridge by bone caliber (Mann Whitney U test)	49
4	Descriptive statistics and comparison between baseline and 3 months within the same group regarding horizontal measures (width) for alveolar ridge by CBCT (paired t test)	51
5	Descriptive statistics and comparison between control and test side regarding horizontal measures (width) for alveolar ridge by CBCT (independent t test)	52
6	Descriptive statistics and comparison between control and test side regarding percent change of horizontal measures (width) for alveolar ridge by CBCT (Mann Whitney U test)	53
7	Descriptive statistics and comparison between baseline and 3	55

	months within the same group regarding vertical measures (height) for alveolar ridge by customized acrylic stent (paired t test)	
8	Descriptive statistics and comparison between control and test side regarding vertical measures (height) for alveolar ridge by customized acrylic stent (independent t test)	56
9	Descriptive statistics and comparison between control and test side regarding percent change of vertical measures (height) for alveolar ridge by customized acrylic stent(independent t test)	57
10	Descriptive statistics and comparison between control and test side regarding mean area fraction of bone (independent t test)	58

List of Figures

No.	Figures	Page
1	A plate showing the steps of the histochemical evaluation	32
2	Preoperative remaining root upper first premolar	33
3	atraumatic extraction of tooth using periostom and luxator	33
4	preoperative bucco-lingual width measured clinically by bone caliper	34
5	Socket after atraumatic extraction	34
6	The customized acrylic template on a study model	35
7	xenograft (hypro- oss) and vitamin D ₃ gel loaded in sterile syring	35
8	Socket filled with xenograft(hypro -oss) mixed with vit D3	36
9	Socket covered by collagen membrane and cross over suture	36
10	postoperative alveolar ridge after 3 months	37
11	Mucoperiosteal flaps were elevated to allow access to the alveolar ridge	37
12	abone core biopsy was taken from the grafted area by A trephine bur (2mm)	38
13	Implant placement	38
14	Preoperative remaining root upper second premolar	39
15	preoperative bucco-lingual width measured clinically by bone caliper	39
16	Socket after atraumatic extraction	40
17	Collagen membrane (hypro-sorb)and xenograft(hypro- oss)	40
18	Alveolar ridge preservation by xenograft and collagen membrane	41
19	Socket sutured with 4-0 polypropylene	41
20	postoperative alveolar ridge after 3 months	42
21	Mucoperiosteal flaps were elevated to allow access to the alveolar ridge	42
22	a bone core biopsy was taken from the grafted area by A trephine bur(2mm)	43
23	An osteotomy site was prepared with a surgical handpiece and the implants were inserted	43
24	Mucoperiosteal flaps were always replaced and sutured with 4-0	44

	polypropylene	
25	Bar chart showing mean horizontal measures (width) for alveolar ridge by bone caliber in control and test side	48
26	Bar chart showing mean percent change of horizontal measures (width) for alveolar ridge by bone caliper in control and test side	49
27	Bar chart showing mean horizontal measures (width) for alveolar ridge by CBCT in control and test side	52
28	Bar chart showing mean percent change horizontal measures (width) for alveolar ridge by CBCT in control and test side	53
29	Bar chart showing mean vertical measures (height) for alveolar ridge by customized acrylic stent in control and test side	56
30	Bar chart showing mean percent change of vertical measures (height) for alveolar ridge by customized acrylic stent in control and test side.	57
31	Bar chart showing mean area fraction of bone formation in control and test side	59
32	Photomicrography of Control group showing medium sized trabeculae of osteoid tissue which contain plump of osteocyte in lacuna but they were not interconnecting with each other	61
33	Photomicrography of Test group showing large sized trabeculae of osteoid tissue through highly cellular stroma which contain active plump of osteocyte in lacuna	61
34	Photomicrography of Control group showing few newly formed bone trabeculae (blue) while fully mineralized tissue appeared (red) , they surrounded by few fibrous matrix	62
35	Photomicrography of Test group showing large amount of newly formed bone trabeculae (blue) with many osteocytes inside lacunae and surrounded by fibrocellular matrix with few blood vessels.note union between bon trabeculae	62
36	Preoperative Non restorable upper first premolar.	63
37	bucco-lingual width measured radiographically by CBCT and clinically by bone caliper	63
38	a traumatic extraction of tooth using periostom and luxator thus (avoiding trauma to the socket walls)	64
39	extracted root extracted root	64
40	Clinical view of the acrylic template	65
41	Xenograft mix with vitamin D3 gel	65

42	socket filled with xenograft mixed with vit D ₃ gel	66
43	socket covered by collagen membrane and cross over suture	66
44	postoperative alveolar ridge after 3 months	67
45	postoperative bucco-lingual width of alveolar ridge measured radiographically by CBCT and clinically by bone caliper	67
46	Clinical view of the acrylic template for post operative evaluation of vertical measurement	68
47	Crestal incision then Mucoperiosteal flaps were elevated to allow access to the alveolar ridges	68
48	bone core biopsy was taken from the grafted area by A trephine bur (2mm)	69
49	An osteotomy site was prepared with a surgical handpiece and the implants were inserted	70
50	Mucoperiosteal flaps were always replaced and sutured	70
51	Final crown	71
52	preoperative Non restorable upper right premolar	72
53	bucco-lingual width measured radiographically by CBCT and clinically by bone caliper	72
54	a traumatic extraction of tooth using periostom and luxator thus (avoiding trauma to the socket walls)	73
55	Clinical view of the acrylic stent	73
56	socket filled only with xenograft without vit D ₃ gel	74
57	socket covered by collagen membrane and cross over suture	74
58	postoperative alveolar ridge after 3 months	75
59	postoperative bucco-lingual width measured radiographically by CBCT and clinically by bone caliper	75
60	Clinical view of the acrylic template for post operative evaluation of vertical measurement	76
61	Crestal incision then Mucoperiosteal flaps were elevated to allow access to the alveolar ridges	76
62	a bone core biopsy was taken from the grafted area by A trephine bur (2mm)	77
63	The bone biopsy was placed in 10% formalline for histological examination	77
64	An osteotomy site was prepared with a surgical handpiece and the: implants were inserted	78

65	Mucoperiosteal flaps were always replaced and sutured	78
66	Final crown	79
