ACKNOWLEDGMENT

The author wishes to express her deepest gratitude to Prof. Dr. Mohsen S. Tadros, Prof. of Emeritus, Department of Economic Entomology, Faculty of Agriculture, Kafr El-Sheikh, Tanta University for suggesting the problem, sincere guidance, valuable advice and constructive criticism indispensable efforts for achieving this study, and for reviewing the manuscript.

Thanks are also extended to Ramadan M. Helal, Associated Prof. of Economic Entomology and Drs. Farag A. Sharshir Associated Prof. of Agric. Zoology, Faculty of Agriculture, Kafr El-Sheikh, Tanta University for their advice, guidance and encouragement during the course of the present study.

My great thanks are also due Prof. Dr. Shawky Metwally, Prof. of Entomology and Dean of the Faculty of Agriculture Kafr El-Sheikh Tanta University for his encouragement and all facilities he offered during the study of the present work.

My gratitude is also extend to Prof. Dr. Ahmed S. El-Khodary, Chairman of Economic Entomology Department for his permanent encouragement, advices and all the facilities he offered during the study of the present work.

My gratitude is also extended to Dr. Rafat B. Abo Arab Senior of Researcher, (Pesticides), stored product Res. Dept. (A.B.C.) for his help and all facilities he offered in the cause of control measures in the present study.

My great thanks are also due to all staff members of the Economic Entomology Department, Faculty of Agriculture Kafr El-Sheikh, Tanta University for the great help and facilities they offered during the course of the present investigation.

CONTENTS

	Page
I. INTRODUCTION	1
II. REVIEW OF LITERATURE.....	3
A. Survey and population studies	3
1. Survey.....	3
2. Population studies	9
B. Biological studies.....	10
1. Biology of <i>Tyrophagus putrescentiae</i> (Schränk)	10
2. Biology of <i>Trogoderma granarium</i> (Everts).....	13
C. Toxicological tests	15
Toxicity of different compounds against mites and insects under laboratory conditions	15
1. Toxicity of pesticides against mites.....	15
2. Toxicity of pesticides against insects	17
3. Toxicity of insect growth regulators against mites.....	19
4. Toxicity of insect growth regulators against insects	19
5. Toxicity of botanicals against mites	21
6. Toxicity of botanicals against insects	23
7. Toxicity of mineral oils against mites	28
8. Toxicity of mineral oils against insects	28
III. MATERIALS AND METHODS.....	30
1. SURVEY STUDIES	30
A. Sampling.....	30
B. Population studies	32
1. Temperature.....	32
2. The average relative humidity (R.H) of the week before.....	32
3. Moisture content	33
C. Effect of pest infestation on stored food seeds	33
1. Germination.....	33
2. Loss percentage of stored materials	33
D. Statistical analysis	34
E. Shannon-weaner diversity index (S.W.I)	34
2. BIOLOGICAL STUDIES.....	34
2.1. Biology of <i>Tyrophagus putrescentiae</i> (Schränk)	34
2.2. Biology of <i>Trogoderma granarium</i> (Everts).....	35
3. TOXICOLOGICAL TESTS	36
Procedure	36
A. As for the mite, a pure culture of <i>T. putrescentiae</i>	36
B. As for the used insect, a pure culture of <i>T. granarium</i>	36
C. The selected compounds for control	36
D. The chemical structure of the test compounds	36
1. The chemical synthetic pesticide.....	36

2.	Insect growth regulators (IGR)	37
3.	Oils	37
a.	Plant oils	37
b.	Mineral oils	37
E.	Preparation of stock dilutions and the used concentrations	37
F.	Methods of application of bioassay of the tested compounds	38
A.	<i>Tyrophagus putrescentiae</i>	38
1.	Baker's yeast method of Dicke <i>et al.</i> (1953)	38
2.	Cigarette paper tube method of Zdarkova and Horak (1973)	39
B.	<i>Trogoderma granarium</i> (Everts)	39
1.	Thin film residue technique	39
2.	Seed treatment (mixing with media)	40
IV.	RESULTS	41
A.	SURVEY STUDIES	41
1.	General survey	41
2.	Pest survey and tested materials	41
2.1.	Total	41
2.2.	Prevalence of mite species in 13 material	41
2.3.	Dominant mite species and its prevalence in 13 materials	35
2.4.	Insect species prevalence and its dominance in 13 materials	35
3.	Mite species infestation at the six stored food stuff groups ...	48
3.1.	Insect species infestation at the six stored food-stuff groups	50
3.2.	Total infestation (mites & insects) and six stored food stuff groups	50
3.3.	Acarina: Insecta and the 13 tested materials	50
4.	Abundance of pest species within the 13 stored materials	52
B.	POPULATION STUDIES	52
1.	Pest fluctuation of six stored materials during the period of study	52
2.	Mite, insect population fluctuations among the 13 stored materials within the 24 months of study	52
3.	Temperature and relative humidity as a limiting factor for mite and insect population fluctuation	62
3.1.	Temperature	62
3.2.	Relative humidity	64
4.	Statistical analysis	64
5.	Some biological changes such as weight and moisture content resulted from pest infestation to the tested materials	64
5.1.	Loss percentage in weight in the tested materials	64
5.2.	Loss percentage of moisture content with 24 months	64
5.3.	The percentage of crushed grain powdery for 3 tested materials at the end of experiment after 24 months	68
6.	Germination	68
