FACULTY OF ENGINEERING
IRRIGATION AND HYDRAULICS DEPARTMENT

Water, Energy and Food Nexus: A new perspective for managing High Aswan Dam Lake

By

Eng. Amr Fawzy Mahmoud

M.Sc., Integrated Water Resource Management, Cologne-FH (2009)

A Thesis Submitted in Partial Fulfillment of the Requirements for the Degree of Doctor
of philosophy in Civil Engineering

Supervised by

Prof. Dr. Aly El Bahrawy

Professor of Hydraulics, Irrigation and Hydraulics Department
Faculty of Engineering, Ain Shams University

Dr. Eman Sayed

Head of Planning Sector
Ministry of Water Resources and Irrigation

Cairo, Egypt

2019

أَنْزَلَ مِنَ السَّمَاءِ مَاءً فَسَالَتْ أَوْدِيَةٌ بِقَدَرِهَا فَاحْتَمَلَ السَّيْلُ زَبَدًا
رَابِيًا ۚ وَمِمَّا يُوقِدُونَ عَلَيْهِ فِي النَّارِ ابْتِغَاءَ حِلْيَةٍ أَوْ مَتَاعٍ زَبَدٌ
مِثْلُهُ ۚ كَذَلِكَ يَضْرِبُ اللَّهُ الْحَقَّ وَالْبَاطِلَ ۚ فَأَمَّا الزَّبَدُ فَيَذْهَبُ
جُفَاءً ۖ وَأَمَّا مَا يَنْفَعُ النَّاسَ فَيَمْكُثُ فِي الْأَرْضِ ۚ كَذَلِكَ يَضْرِبُ
اللَّهُ الْأَمْثَالَ

STATEMENT

This dissertation is submitted to Ain Shams University for partial fulfillment of the requirements for the Degree of Doctor of philosophy in Civil Engineering

The work included in this thesis was carried out by the author in the department of Irrigation and Hydraulics, Ain Shams University.

No part of this thesis has been submitted for a degree or a qualification at any other university or institution.

Date: / /2019

Name: Amr Fawzy

Signature:

CURRICULUM VITAE

Mr. Amr Fawzy has been active in the water resources engineering in many aspects since his graduation. In 2009, he got his master of Integrated Water Resource Management, Cologne-FH; through his master study in Institute for Technology and Resources Management in the Tropics and Subtropics, he studied the mathematical base of the numerical models that used to solve both hydrological and water planning / management problems. Furthermore, he got deep excursuses in water management and planning. Then, he was a water resources engineer in Nile Water Sector. Currently, he is involved in transboundary water management issues with Nile Basin Countries studies through his work as an senior engineer in the Ministry of Water Resources and Irrigation.

ACKNOWLEDGEMENT

First and foremost, acknowledgement to the Almighty God because he is the only source of power to do good or avoid evil. I wish to thank my family for their love and unyielding patience in the research time. I wish also to thank my supervisors, Prof. Aly El-Bahrawy, Dr. Eman Sayed for their grateful support. I would also like to thank all members of the Nile Water Sector, especially Dr. Ahmed Bhaa El-Din for their support, advices, and data providing.

ABSTRACT

Significant impact on Nasser Lake (NL) inflow is highly expected due to unilateral on-going development plans in some of Nile Basin countries and climate change negative impacts. For decades, NL is considered Egypt's fresh water bank, where Nile water is stored during flood to be used during the recession for agriculture, industrial, municipal and other uses. The expected development activities will have adverse effects on Egyptian water resources overcome, therefore new operation strategies and changes in infrastructure function are needed to adapt with such effects and meet future challenges. New creative ideas are suggested based on applying large scale Water-Food-Energy (WEF) nexus approach, to propose a development plan in the three main Khors which are the major water bodies within the lake. GIS and modelling tools such (ArcGIS 10.3, RIBASIM 7 and MATLAB 2016) were used to select the best scenario to implement the proposed plans. Results were affected mainly by the energy losses between pumping and hydropower and the limited capacity of Old Aswan Dam (OAD) reservoir. In addition, the economic feasibility of constructing renewable energy plants, the proposed infrastructure and WEF nexus approach offer a significant opportunity to meet future challenges. New operation strategies are proposed for NL to enhance the using of dead storage zone below 147 m AMSL, taking into consideration environmental issues.

Keywords: Nile Basin, WEF Nexus, Nasser Lake (NL), Khor Klabsha, High Aswan Dam (HAD), Old Aswan Dam (OAD), Arc-GIS, RIBASIM 7, Pump Station, Run-of-River hydropower, Supplementary Irrigation
