Statement

This dissertation is submitted to Ain Shams University in partial fulfillment of the requirements for the degree of Master of Sciences in Electrical Engineering.

The work included in the thesis was carried out by the author at the department of Electrical Power and Machines, Ain Shams University.

No part of this thesis has been submitted for a degree or a qualification at any other university or institution.

Name: Moaazz Shoaib AbdelSalam

ACKNOWLEDGEMENTS

First and above all, I praise Allah, the almighty for providing me this opportunity and granting me the capability to proceed successfully. This thesis appears in its current form due to the assistance and guidance of several people. I would therefore like to offer my sincere thanks to all of them.

I would like to express my deep gratitude and appreciation to my supervisors Prof. Dr. / M.A.L.Badr and Dr. / Khaled Abdel Aty for their encouragement, suggestions, and patience during the period of this work.

The Department of Electrical power and machines has provided the support and information I have needed to produce and complete my thesis.

I want to thank my lovely family for their support, love, and their precious advice through my life.

Abstract 1

1. Introduction

1.1 Components of a Solar Electric System 3

1.1.1 Solar PhotoVoltaic Panels 3

1.1.2 Batteries 8

1.1.3 Solar Photovoltaic System Controller 9

1.1.4 Inverter 9

1.1.5 Electrical Load 10

1.2 The Configuration of Solar Power 12

1.2.1 Stand alone/Off Grid 12

1.2.2 Grid-connected 12

1.2.3 Grid-connected with power bank up (Grid Interactive) 13

1.2.4 Grid fall back 14

1.3 Grid failover 15

1.4 Thesis objectives 15

1.5 Thesis outlines 15

2. Survey of published literature

2.1 Global Trend Towards Solar Energy 17

2.2 World Energy and Environmental Issues 18

2.3 Photovoltaic Power and Potential in the Deserts 21

2.4 The Origin of Solar Power 25

2.5 Solar PV Electricity Principle 26

2.5.1 Terminology 27

2.5.2 Expectations for Solar Electricity 28

2.6 Why a PV Electric System is Decided? 30

2.7 Cost-Justifying for Solar Cells 30

2.8 Solar Power and Wind Power 31

2.9 Fuel Cells 31

2.10 Solar Electricity and Environment 32

2.11 Solar Electricity Pros. 33

3. Maximum power point tracking techniques

3.1Maximum Power Point Tracking Concept and Necessity 35

3.2 Maximum Power Point Tracking Applied Techniques 39

3.2.1 Incremental conductance technique 40

3.2.2 Perturb & Observe Technique 42

3.2.3 Fractional Open Circuit Voltage 44

3.2.4 Fractional Short Circuit Current 45

3.2.5 Ripple Correlation Control 46

3.2.6 DC – Link Capacitor Droop Control 47

3.2.7 Load Current or Load Voltage Maximization 49

3.2.8 dP/dV or dP/dI Feedback Control 50

3.2.9 Current sweep 50

3.2.10 System Oscillation Technique 52

3.3 Summary 54

4. Artificial Intelligence Techniques Related to MPPT

4.1 Artificial Intelligence Science 55

4.2 Artificial Intelligence Applied Techniques 55

4.2.1 Fuzzy Logic Optimization 55

4.2.2 Genetic Algorithm 56

4.2.3 Neural Networks 57

4.2.4 Hough Technique 60

4.2.5 Image Data Structures 61

4.2.6 Inductive Logic Programming 61

4.2.7 Particle Swarm Optimization 62

4.3 Summary 64

5. Proposed MPPT Techniques with Simulation Study and Results

5.1 PV System with MPPT Block Diagram 65

5.2 Incremental Conductance Method 66

5.2.1 IncCond Simulation Model of Connected DC load. 66

5.2.2 Incremental Conductance Maximum Power Point tracking Block Configuration in Simulink. 67

5.2.3. Simulation Results 68

5.2.4 IncCond Simulation Model of Connected AC Load. 69

5.2.5 Simulation Results. 70

5.3 Fuzzy Logic Optimization Technique. 71

5.3.1 FLO Simulation Model of Connected DC load. 75

5.3.2 Fuzzy Logic Optimization Maximum Power Point Tracking Block Configuration in Simulink. 76

5.3.3 Simulation Results 77

5.3.4 FLO Simulation Model of Connected AC load. 78

5.3.5 Simulation Results 79

5.4 Differentiation of The Output DC Power for The Two Applied Techniques 80

6.Conclusions 82
