بسم الله الرحمن الرحيم

« رب أوزعني أن أشكر نعمتك التي أنعمت علي

وعلي والدي وإن أعمل صالحا ترضاه وأدخلني

برحمتك في عبادك الصالحين »

(صدق الله العظيم)

سوره النمل آية ١٥

قال رسول الله صلى الله عليه وسلم :

« من أراد الدنيا فعليه بالعلم ومن أراد الآخرة

فعليه بالعلم ومن أرادهما معا فعليه بالعلم »

(صدق رسول الله)

Acknowledgement

Words cannot express the gratitude I have to all those who offered their help and advice during this study .

*I am deeply grateful to prof . **Dr , Ahmed Abd EL - Mo-neim khashaba** professor of pediatrics , faculty of medicine , Benha university for his stimulating , encouragement , advice and guidance for the accomplishment of this work*

*I would like to express my deep appreciation and thanks to prof . **Dr . Zeinab Abd EL -Hameed loutfi** , Director of High Institute of Nursing , Ain Shams university for her Supervision and continuous guidance along with her constructive suggestions .*

*Words can never express my indebtment and ever lasting gratitude to **Dr . Sabah Saad EL -Sharkawy** , Assisstant professor of pediatric Nursing, High Institute of Nursing, Ain Shams university for her extreme patience , untiring effort , insistence and continuous help throughout every step of the study .*

Finally , I would like to vote my deepest thanks for all those who contributed to accomplish this study and full provision of all facilities .

My thanks to my family , and my husband

*My immense debt to my husband for devoting most
of his time for the achievement of this thesis .*

LIST OF TABLES

Table	Page
I- Distribution of mothers according to their Sociodemographic characteristics _____	40
II - Distribution of mothers according to their Knowledge concerning the importance of breast feeding _____	42
III - Distribution of mothers according to their Knowledge concerning the initiation of breast feeding _____	43
IV- Distribution of mothers according to their Knowledge concerning the duration of exclusive breast feeding _____	44
V- Distribution of mothers according to their Knowledge concerning the frequency of practicing breast feeding _____	45
VI- Distribution of mothers according to their Knowledge concerning the importance of colostrum _____	46
VII- Distribution of mothers according to their Knowledge concerning the technique of breast feeding _____	47
VIII- Distribution of mothers according to their Knowledge concerning breast care _____	48
IX- Distribution of mothers according to their knowledge concerning the practice of milk expression _____	49
X- Distribution of mothers according to their knowledge concerning the concepts of proper weaning _____	50

Table	Page
XI- Distribution of mothers' knowledge of the study group after coun selling sessions concerning the different aspects of breast feeding . _____	51
XII- Relation between types of feeding and the mothers' initiation and continuation of breast feeding _____	54
XIII - Relation between mothers' occupation and their initiation and continuation of breast feeding _____	55
XIV- Relation between mothers' education and their initiation and continuation of breast feeding _____	56
XVII- Relation between mothers' age and their initiation & continuation of breast feeding _____	57

LIST OF FIGURES

Figure	page
I- knowledge of the studied women after three times counselling as regards breast feeding _____	53
II- Comparison between the studied women as regards their Knowledg about breast feeding before counselling _____	54.a
III - Comparison of the studied women as regards their Knowledge about breast feeding after first time counselling _____	54.a

INTRODUCTION

Introduction

Infant nutrition is the important determinant of later development , and that many adult diseases may have the origins in the very first few years of life . However , if the lack of nutrients was present in the critical phase of human development , it will have a long - lasting or permanent effect on the final outcome (*kolacek, and Grguric ,1996*).

Infant feeding is the dominant nutritional interest in third world countries and it gets much attention in Egypt (*UNICEF, 1990*). Breast feeding is still a norm in Egypt as its starting rate is very high (more than 90%) .Several studies showed that breast feeding is declining in both urban and rural societies (*Eissa , et . al ,1990*).

Breast milk is universally recommended as the preferred source of infant nutrition , in part because of its superior nutrient and immunologic properties , so successful breast feeding requires nursing on-demand, prevention of sore nipples and convenient access to medical advice(*Spencer , 1996*)

The unique role of breast feeding for the survival and development of newborn infants has been mentioned in all religious and cultures and has been universal practice in all countries for millennia. The koran provides clear rules governing breast feeding and the adoption of a wet nurse , if for unavoidable reasons , the mother is unable to continue breast feeding (*Hafez, 1995*).
