ACKNOWLEDGEMENT

First and foremost, all thanks and praise to *Allah*, the most merciful for giving me prosperity and strength to fulfill this work.

Special thanks and deep gratitude are devoted to ***Prof. Dr. Sayed Sabet Abdel-Rehim*** (Faculty of Science, Ain Shams University) for his supervision, generous guidance, great support, valuable advice and sincere help throughout this work.

I cannot thank enough ***Prof. Dr. Omneya Mohamed El Hussaini*** (Deputy head of production sector for technical affairs, Nuclear Materials Authority) for her input. I will be forever indebted for her constant guidance and scientific knowledge throughout my Ph.D. As a fellow supporter, I couldn't have asked for a better supervisor and fruitful discussions in all steps of this work.

I would like to thank ***prof. Dr. Hamdy Hassanien Hassan*** (Faculty of Science - Ain Shams University) for help and following up the details of this study.

Special gratitude and deep acknowledgements are to ***Prof. Dr. Mohamed Abdel-Moniem Deyab*** (Egyptian Petroleum Research Institute (EPRI)) for his valuable knowledge about the practical work and scientific information that has been essential during my Ph.D.

I would also like to thank ***Dr. Waleed Mahmoud and Dr. Ahmed Abdel-Kareem*** (Nuclear Materials Authority) for supplying the ore samples and for helping us to complete this work.

Deepest thanks for all the staff members and colleagues of Department, SEM lab. and the team work of XRD lab., Nuclear Materials Authority for encouragement and cooperation. Many thanks are to the staff members, head of Chemistry Department, and Dean of the Faculty of Science, Ain Shams University for their help in this work.

Many thanks to my mother, my son, all the family and the soul of my father.

Chapter 1: Introduction	1
1.1 Aluminum	1
1.2 The Corrosion Process	2
1.3 The methods used for corrosion protection measurements	6
1.4 Corrosion Inhibitors	9
1.5 The Surfactants	13
1.6 The Rare Earths	14
1.7 Literature Survey	21
1.8 Aim of the work	25
Chapter 2: Experimental	26
2.1 Chemicals and Reagents	26
2.2 Methodology	27
2.3 Part 1	28
2.4 Part 2	29
2.5 Part 3	30
2.6 Part 4	30
2.7 Part 5	32
2.9 Analytical Methods	35
2.10 Instruments	36
Chapter 3: Results and Discussion	37
Part 1: Inhibition of AA6061 in di-Sodium hydrogen phosphate by Surfactant	37
3.1.1 Effect of Surfactant Concentration (Polarization technique)	37
3.1.2 Impedance Measurements	44
3.1.3 Activation Energy	52
3.1.4 Adsorption Isotherm	54
Part 2: Inhibition of AA6061 in Sodium Chloride Solution by Surfactant	59

3.2.1	Effect of Surfactant Concentration (Polarization technique)	59
3.2.2	Impedance Measurements	65
3.2.3	Adsorption Isotherm	68
3.2.4	Effect of Temperature	71
3.2.5	Effect of Scan Rate	77
3.2.6	Chronoamperometry	80
Part 3:	Inhibition of AA6061 in di-Sodium hydrogen phosphate by Cerium salts	87
3.3.1	Effect of Cerium salt concentration	87
3.3.2	Effect of Temperature	98
3.3.3	Effect of Immersion Time	102
3.3.4	Effect of Scan Rate	105
Part 4:	Inhibition of AA6061 in Sodium Chloride Solution by Cerium salts	108
3.4.1	Effect of Cerium salt concentration	108
3.4.2	Effect of Temperature	123
3.4.3	Effect of Immersion Time	127
3.4.4	Effect of pH	130
Morphology		131
Part 5:	Extraction of Cerium salts from Egyptian Monazite	134
3.5.1	Chemical treatment of monazite concentrates	134
3.5.2	Recovery Procedure	134
3.5.2.4	Separation of Pure Cerium from the Prepared Monazite RE Cake	136
3.5.2.5	Optimization of the stripping process	140
3.5.2.6	Technical working flowsheet	153
Conclusions		155
