Botany Department

كلية معتمدة

Ecology of Endangered Plant Species at Wadi Al-Afreet (North Western Coast), Egypt.

A Thesis

Submitted for the Degree of Doctor of Philosophy of Science
in Botany

By

Eman Gamal Ahmed Mohamed

B.Sc. (2008) - M.Sc. (2015)

Assistant lecturer–Department of Botany
Faculty of Science
Ain Shams University

Supervisors

Prof. Dr. Amal Ahmed Morsy

Professor of Plant Ecophysiology–Department of Botany
Faculty of Science
Ain Shams University

Dr. Ahmed Hashim M. Abd El-latif

Lecturer of Botany–Department of Botany
Faculty of Science
Ain Shams University

Dr. Hend Ahmed Kamel

Lecturer of Botany–Department of Botany
Faculty of Science
Ain Shams University

Dr. Mahmoud El-sayed Ali

Researcher of Plant Ecology
Ecology and Range Management Department
Desert Research Center

Dr. Ghada Ali Khdery

Researcher at Agriculture Applications
Department
National Authority for Remote Sensing and
Space Science

(2019)

Approval Sheet

Title of Thesis: " Ecology of Endangered Plant Species at Wadi Al-Afreet
(North Western Coast), Egypt."

Degree: Doctor of philosophy of science in Botany

Name of student: Eman Gamal Ahmed Mohamed

This Thesis for the Ph.D. Degree has been approved by:

Supervision committee

Prof. Dr. Amal Ahmed Morsy

Professor of Plant Ecophysiology, Botany Department, Faculty of Science, Ain Shams University.

Dr. Ahmed Hashim M. Abd El-latif

Lecturer of Botany, Botany Department, Faculty of Science, Ain Shams University.

Dr. Hend Ahmed Kamel

Lecturer of Botany, Botany Department, Faculty of Science, Ain Shams University.

Dr. Mahmoud El-sayed Ali

Researcher of Plant Ecology, Ecology and Range Management Department, Desert Research Center.

Dr. Ghada Ali Khdery

Researcher at Agriculture Applications Department, National Authority for Remote Sensing and Space Science.

Examination committee

Prof. Dr. Mohamed Nabih El-Shourbagy

Emeritus Professor of Plant Ecophysiology, Botany Department, Faculty of Science, Tanta University.

Prof. Dr. Fawzia Abo srea Ahmed Ebad

Emeritus Professor of Plant Ecophysiology, Botany and Microbiology Department, Faculty of Science, Al-Azhar University (Girls branch).

Prof. Dr. Amal Ahmed Morsy

Professor of Plant Ecophysiology, Botany Department, Faculty of Science, Ain Shams University.

Date: / / 2019 Committee in Charge

This Thesis has not previously been submitted for a degree at this or any other university

Head of Botany Department

Prof. Dr. Hanaa Moustafa Shabbara

Acknowledgment

Firstly, I do give praise to Allah for giving me the ability to complete this work successfully.

I wish to express my deep gratitude to **Prof. Dr. Dr. Amal Ahmed Morsy** Professor of Plant Ecophysiology, Botany Department, Ain-Shams University, for her supervising the work, reading the manuscript and for using all the facilities during the whole course of study.

I am greatly indebted to **Dr. Ahmed Hashim M. Abd El-Latif** lecturer of Plant Ecology, Faculty of Science, Ain Shams University for his advice, kind encouragement and reading the manuscript.

Also, I am greatly indebted and would like to express my deepest gratitude to **Dr. Hend Ahmed Kamel** lecturer of Plant Ecology, Botany Department, Ain-Shams University, for her supervision, continuous support, reading the manuscript and great help in the whole work.

I am greatly indebted and would like to express my deepest gratitude to **Dr. Mahmoud El-sayed Ali** Researcher of Plant Ecology, Ecology and Range Management Department, Desert Research Centre for his supervision, continuous support, reading the manuscript and great help in the field.

I am greatly indebted and would like to express my deepest gratitude to **Dr. Ghada Ali Khdery** Researcher at Agriculture Applications Department National Authority for Remote Sensing and

Space Science for her supervision, continuous support, reading the manuscript and great help in the whole work.

Great thanks to those people without them I could not make this work: My mother's soul; My dear father who encouraged me throughout my life; My husband for his patience, encourage and support all times; My brothers for their great efforts and finally my lovely daughter and son.

Thanks, and gratitude are also due to all professors and my colleagues in the faculty of science.

Special thanks go to **Prof. Dr. Hanaa Moustafa Shabbarah**, Head of Botany Department, Faculty of Science, Ain-Shams University, for his support and encouragement.

DEDICATION

Every challenging work needs self efforts as well as guidance of elders especially those who were very close to our heart. My humble effort I dedicate to my sweet and loving

My mother's soul (R.I.P.)

*Father, husband, brothers, daughter "Hana" and son
"Anas"*

Whose affection, love, encouragement and prayers of day and night make me able to get such success and honor.

List of Tables

Table (1): Meteorological data recorded from three stations (Al-Salloum, Marsa Matrouh and Siwa during the period from 2000 to 2017.	44
Table (2): classification of layers used to predict the disappearance location of two studied species at Wadi Al-Afreet.	65
Table (3): The ASD field spec 3 specifications.	72
Table (4): Summary of soil indices, equations and references.	79
Table (5): Summary of vegetation indices, algorithms and sources for vegetation indices, R_x is the reflectance at the given wavelength (nm).	80
Table (6): List of the recorded families with their species, Duration, Chorotype, Life form, Habitat, Biological type and Remarks in Wadi Al-Afreet.	94
Table (7): Chorological analysis of the examined species as numbers and percentages of the species recorded in the study area.	105
Table (8): Means of importance value (I.V.) and presence (%) of selected species in the four vegetation groups derived after application of TWINSpan in Wadi Al-Afreet. Values in bold are species with highest presence values.	117
Table (9): Means (\pm), standard deviation and significance of variation between groups (analysis of variance between sample groups 1-6) for 15 environmental variables in six groups of stands, distinguished by TWINSpan program in Wadi Al-Afreet. (values with same litter in the same raw are not significant).	119
Table (10): Species biodiversity indices for the seven vegetational groups resulted from TWINSpan.	127
Table (11): Mean (\pm) standard deviation of some demographic variables: (H: Height, D: Diameter, r: simple linear correlation coefficient between height and diameter, size index, volume, density (ind. ha ⁻¹) of two selected species at wadi Al-Afreet.	130
Table (12): Mineral contents (Ca ⁺² , Mg ⁺² , Na ⁺ and K ⁺ in meq/L) of <i>Ebenus armitagei</i> and <i>Periploca angustifolia</i> , the soil below them and the ratio between them.	140
Table (13): The optimal waveband to differentiate between studied species.	214

Table (14): Different soil hyperspectral indices (SAVI, DSI, SI and NDWI,) used in the study.....	218
Table (15): Correlation between the different soil hyperspectral indices and their chemical analysis.....	220
Table (16): Values of vegetation indices: Normalized Difference Vegetation Index (NDVI), Plant Senescence Reflectance Index (PSRI), Moisture Stress Index (MSI) and Simple ratio (SR).	223
Table (17): Calculated Leaf pigment Index: Carotenoid Reflectance Index (CRI 1 and 2), Anthocyanin Reflectance Index (ARI 1and 2) and chlorophyll a and b Concentration.	227
Table (18): Red edge vegetation index; RENDVI, MRENDVI, MRESR and REPI... 	231
Table (19): Correlations between chlorophyll content and RENDVI, MRENDVI, REPI and MRESR.....	234
Table (20): Phytoconstituents, R.T.= retention time, peak area, formula and molecular weight of chloroform extract of wild <i>Periploca angustifolia</i>.....	239
Table (21): Phytoconstituents, R.T.= retention time, peak area, formula and molecular weight of chloroform extract of cultivated <i>Periploca angustifolia</i>.	244
Table (22): Comparing the secondary components and their categories of chloroform extract in wild and cultivated <i>Periploca angustifolia</i>.	247
Table (23): Phytoconstituents, R.T.= retention time, peak area, formula and molecular weight of ethanol extract of wild <i>Periploca angustifolia</i>.	251
Table (24): Phytoconstituents, R.T.= retention time, peak area, formula and molecular weight of ethanol extract of cultivated <i>Periploca angustifolia</i>.	256
Table (25): Comparing the secondary components and their categories of ethanolic extract in wild and cultivated <i>Periploca angustifolia</i>.	260
Table (26): The antimicrobial activities of the chloroform, ethyl acetate, methanol and petroleum ether extract of wild and cultivated <i>Periploca angustifolia</i>.....	268
